To win this war organization is necessary and every existing organization should be utilized; both Republican and Democratic organizations can be most helpful; every speech that is made in the campaign should be a loyalty speech; with every speaker "America first, partisanship second" should be the controlling sentiment. No opportunity should be lost by either party to impress upon the people the righteousness and justice of the war and that we must go on with it until we win it. President Wilson may not call Republicans into consultation; he may not appoint Republicans in his Cabinet; nevertheless, Republicans will support him in all proper war measures, because he is the President of the United States, because he is Commander in Chief of the Army and Navy. If Democrats desert him in the future, as in the past, on vital war measures, the Republicans will furnish votes enough to put them through; but in doing so we support the Government of which we are a part, and neither Senators nor Congressmen should be rubber stamps.

President Wilson has his responsibilities as Commander in Chief of the Army and Navy in the prosecution of the war, and Congress has its responsibilities in regard to legislation necessary to carry on the war. As the President should not, if he could, delegate his responsibilities to Congress, so Congress should not delegate its responsibilities to him. It is his duty to recommend to Congress such legislation as he thinks necessary. If he asks for more men, we will provide them. If he needs more money, we will appropriate it. In everything necessary in connection with the Army and the Navy we will follow him, but we should not permit any man, without protest, to determine what are war measures and what are not. That Congress should determine for itself. Every power necessary to enable President Wilson to carry on the war to victory should be granted him, but all other powers vested in Congress should be as carefully guarded in time of war as in time of peace. The record of the past 12 months in the way of war preparations is not altogether inspiring. The incompetency in carrying on our aircraft program is disheartening. The record of the first six months in our shipping program is one which we do not like to think about. The delay in securing heavy artillery we deplore. The record of the past 12 months must not be repeated; the American people will not tolerate it; it will not be repeated, because at last we are beginning to recognize that publicity is of greater value in war preparations than concealment of plans and preparations from the enemy. When we appropriated \$640,000,000 for aeroplanes we were told that the public must not have any information concerning the details of the aircraft program, for such information would be of value to the enemy. The result is that up until a short time ago we had sent but one combat aeroplane to France. I have not observed that our boast a year ago that we would have 20,000 aeroplanes in France by the 1st of July deterred Germany in any way in her fighting. It would have been better to have had greater publicity, and, as a result, a thousand combat aeroplanes in France to-day than concealment and silence and only one "over there" manufactured in America. We must have less boasting about what we are going to do and more doing of what we have set out to accomplish.

Congress is powerless to prevent incompetence and waste of money. All Congress can do is to provide the means with which to prosecute the war and through its committees investigate the expenditures which it authorizes. The result, then, must rest with the executive department of the Government and with the American people. I say with the American people, because when incompetence and waste exist the force of public opinion is the only remedy.

And public opinion is already making itself felt and conditions are rapidly being remedied. In the aircraft division we have at last a man at the head who will produce aeroplanes, who will do less talking but get more action. So in our shipping program, we now have a man in charge who will bring to the service of the Government the same great capacity and executive ability that he has shown in private life. Theorists must give way to practical men, and instead of conducting experiments without progress we must utilize what we have and get results.

Publicity in our preparation for war is one of the best aids that President Wilson can have. We have assumed to place upon him duties and responsibilities that no living man could by himself perform. He must act through others, and the American people demand that the men selected by him be the best the country has. Whenever and wherever he has made incompetent selections the facts should be made known to him and to the country, so that he may replace them with others fit for the job. That President Wilson should welcome this goes without saying. To win the war is his great desire, as it is that of every loyal American, and constructive criticism will help him in his great task. I would say in this connection that anything but

constructive criticism should not and will not be tolerated by the American people. Any man who will criticize for political advantage or for the purpose of destroying the confidence of the American people in President Wilson should be condemned in exactly the same way as he should be condemned who would shield income-tax and extravagance for fear that its exposure might hurt ~~one~~ one politically.

But we must not lose sight of the fact that notwithstanding we have not in the last 12 months made the progress that we had hoped to make, nevertheless we have accomplished great things. We have more than a million and a half of men under arms, the best Army physically, mentally, and morally ever raised in the history of the world; men eager to get into the fight, eager to meet the German foe and do their part for America and civilization. We have a Navy of which every American is proud—a Navy that in the past 12 months has made a record of wonderful accomplishment.

And we must remember, too, that in this gigantic undertaking it is inevitable that there will be a degree of incompetence and extravagance. It is inevitable that there will be some mistakes made. We have no right to complain that such things have occurred, for they have accompanied every war. The only demand that we have the right to make is that incompetence and extravagance, when discovered, shall not be continued, and that the agencies elected to carry out our undertakings shall be chosen with regard to their qualifications to perform the duties imposed upon them.

The Republican Party is fortunate in that it is not compelled to raise any false issues in the coming campaign. We do not need to attack the loyalty of the Democrats in order to make an issue. We hope every Democratic nominee next fall will be loyal in support of the war and that the only issue between the two parties will be, Which can best be trusted to wisely legislate in matters indirectly connected with the war and meet and solve the great economic questions which will confront us following the war? Upon this issue the Republican Party is supremely confident of the verdict of the American people.

The Republican Party to-day is united as it has not been for a decade. Its rank and file are united because they realize that the country needs the Republican Party.

It was Republican dissension that placed the Democratic Party in power; it is Republican unity that will put it out of power. The beginning will be made next November, and the job will be finished in 1920. The Republican Party realizes its responsibility. No political party can succeed in the future that does not serve the highest ideal of the Nation, and when this war is over, when America is saved, these ideals will be even higher than ever before.

In this war the American people have learned anew to make sacrifices for their country. Thousands of our boys will never come back. There will be mourning in many homes before this war is done; and when the war is won our people will determine that because of these sacrifices America shall be a better place for all of its people than it ever has been.

Unselfish service coupled with ability to wisely serve will be demanded. The great economic problems that will confront us must be met and solved, not from the standpoint of any class or section but from the standpoint of the Nation. Giving a privilege here to a class and there to a section is not statesmanship and will not be tolerated.

The Republican Party has earned the confidence of the American people, and it will be commissioned by them to undertake and carry through the great problems of reconstruction made necessary by the war. As our motive has been "America first" in the war, so the Republican Party will continue to be for "America first" when the war is over. This will not be difficult, for it has always been for "America first" when others have not in our economic affairs. The protective principle is a Republican principle, and will continue to be; but the principle underlying a protective tariff will have a much wider application in the future.

The Republican tariff policy is for the protection of American laboring men, primarily through the levying of duties at the customhouse, but in the future we must apply the principle of protection to a much wider field than heretofore. We must protect the individual incentive and ambition of men to a wider degree than in the past. Every man must be given a chance to achieve the best things in life, so that success or failure will depend upon him alone. The rights of labor must be protected, so that it will not be exploited or oppressed by capital; the rights of capital must be protected, so that it shall not be oppressed by labor. In the future in America labor and capital must not look upon each other as enemies; they must cooperate as friends. Agriculture must be dealt with fairly. The large

margin between what the farmer receives and what the consumer pays must be cut down. If we could divide the unnecessary expense in distribution between the producer and the consumer, the farmer would receive more and the consumer would pay less than he does to-day. All industries must be brought into closer cooperation. The political demagogue who would array class against class, who profits by hate and feeds on discord, should not be tolerated in any party.

The problems which will arise following the war must be solved upon the basis of justice and equity. They must be solved in such a way as will give to all of our people an ever-widening field of liberty; not political power, but the good of the whole people must be the aim. We must make of America to an ever-increasing degree a land where the highest ideals of man shall find their full fruition. We must by wise legislation and administration protect every man in every sphere—protect him in his rights and in his property, furnish incentive to every laudable ambition, prevent his being exploited and oppressed by others, and thus give full rein to all the better instincts and higher ideals of men.

The Republican Party was born because its founders had a newer conception of liberty and the rights of men. The Nation went through fire because of the principles the Republican Party proclaimed, but the Nation came out of that fire united and purified and the principles which gave the Republican Party birth were established.

This Nation is again going through fire; again in the onward march of civilization still higher ideals are to be established. Again the great opportunity for service comes to the Republican Party. It will not fail to accept the opportunity, and through its instrumentality new foundations of liberty and justice will be laid so deep and broad that they will never be overthrown.

This will be the mission of the Republican Party, and as it had a glorious past so will it have a glorious future in the service of mankind.

EXTENSION OF REMARKS

OF

HON. HUBERT D. STEPHENS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 13, 1918.

Mr. STEPHENS of Mississippi. Mr. Speaker, as President Wilson very aptly said a few days ago, "Politics is adjourned." The thoughts of the people are turned not to politics but to questions relating to the war. They have no time to waste on small matters.

The sessions of the Sixty-fifth Congress have been the most important of any Congress in the history of the Nation. Believing that it will be of interest and value to have a connected statement reviewing the legislation that has been passed by the House, this statement has been prepared.

No attempt will be made to consider the many interesting and important events that transpired prior to the entry of the United States into the war. They have no pertinency to the purpose that is in mind, which is simply to discuss legislation as it relates to war measures.

THE WAR CONGRESS.

The life of the Congress began March 4, 1917. On April 2, 1917, it met in special session on proclamation by the President. The entire Nation, indeed the world, understood the purpose of the session. The military maniacs of Germany had decreed that war must come. Obsessed with the idea of world dominion, crazed by the lust for blood, for power, for territory, Germany had sent forth the edict that the "dove of peace" should have no resting place in all the world.

Earnest efforts had been made to keep our Nation neutral and to have the United States remain simply a spectator of the horrible holocaust of war that was despoiling Europe, devastating a continent, and destroying innumerable lives. President Wilson had dispatched note after note of protest against the conduct of Germany toward the United States. Promise after promise to respect the rights of the Nation were given by the German Government, but each was but "a scrap of paper."

Hope of remaining at peace would be built up only to be swept away. Deceit was practiced to mislead us. Cunningly devised plans of deception were laid. Intrigues were plotted against us. Spies were placed in our midst. Attempts were made to foment internal disturbances. Both lives and property,

were destroyed. Efforts were made to involve the Nation in war with Mexico. International law was trampled under foot with a deliberation that was devilish.

No wonder that Von Rintelen, a German spy who operated in the United States and who is said to be a cousin of the Kaiser, exclaimed:

How loathsome I feel! How this dirty work sticks to me! When this war ends I shall take a bath in carbolic acid.

Or that Capt. von Papen, another German spy, said:

My God! I would give everything in the world to be in the trenches, where I could do the work of a gentleman.

THE WAR RESOLUTION.

All efforts of the President and the Nation to maintain a neutral status and preserve peace proved abortive. On the night of April 2, 1917, the President addressed a joint session of Congress. He said:

With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves, but in unhesitating obedience to what I deem my constitutional duty, I advise that the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the Government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it; and that it take immediate steps not only to put the country in a more thorough state of defense but also to exert all its power and employ all its resources to bring the Government of the German Empire to terms and end the war.

On the night of April 4, 1917, the Senate passed Senate joint resolution No. 1. It reads as follows:

Resolved, That the state of war between the United States and the Imperial German Government which has thus been thrust upon the United States is hereby formally declared; and that the President be, and he is hereby, authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial German Government; and to bring the conflict to a successful determination all of the resources of the country are hereby pledged by the Congress of the United States.

On the morning of April 6, about 3 o'clock, the House passed the same resolution. A few Members, prompted, no doubt, by the hope that war might yet be averted, voted against it. The great majority, feeling that war had already begun, that it had been thrust upon the United States by the German Government, voted for the resolution.

The large crowd that was present when the vote was taken never witnessed a more impressive scene. It was a solemn moment. Members responded to the roll call in low tones. All regretted that war had come to America. There was no enthusiasm for war. But a condition had to be met, a fact had to be faced. The German war lords had thrust war upon us.

While there were deep regrets at the coming of war, these regrets were not long allowed to occupy the thoughts of Members. Each one realized the gravity of the situation, the magnitude of the task before the Nation. So each mind was soon employed in the work of planning ways and means by which the Nation could best utilize its resources to successfully meet the enemy and save itself from the humiliation, degradation, and horror of defeat.

THE EMERGENCY BOND ISSUE.

The resources of the Nation were pledged for the purpose of winning the war. Never before had such large expenditures been made for war purposes as the warring nations of Europe were expending. Naturally the first thought of Congress was to make provisions to finance the war.

On April 14, 1917, the House passed the emergency bond-issue bill. It was the largest authorization for the issuance of bonds ever contained in any bill presented to any legislative body in the history of the world. It provided for the issuance of bonds in the sum of \$5,000,000,000 and an additional issue of \$2,000,000,000 one-year certificates of indebtedness.

The bill passed with only one dissenting vote. That vote was cast by the gentleman from New York [Mr. LONDON]. Thus, by the first step taken, Germany was put on notice that the United States was determined, regardless of cost, not to suffer defeat at the hands of any foreign power.

INCREASE OF THE MILITARY ESTABLISHMENT.

This bill passed the House on April 28, 1917. It provided for raising, organizing, and equipping the increments of the Regular Army provided by the national-defense act of 1916; the drafting into the military service of the United States the National Guard and the National Guard Reserves; to raise by draft 500,000 enlisted men; and authorized the President, in his discretion, to raise and begin training an additional force of 500,000 men. Provision was made for voluntary enlistments.

The original bill was amended in several essential particulars. The greatest contest was over the method of raising an army. Each Member recognized the necessity for an army. Each one was strongly in favor of raising as large an army as

was needed. There was no division of sentiment on that proposition. There was, however, considerable difference of opinion as to the method of raising an army.

Some favored the volunteer system; others preferred the selective-draft system. There was a vigorous contest. What is known as the Kahn amendment provided for the selective-draft system. This amendment prevailed. On the vote there were 313 ayes and 109 nays. On the final passage of the bill there were 397 ayes and 24 nays. Many Members who voted for volunteers also voted for the bill as amended by the Kahn amendment. My vote was cast first for volunteers and then for the bill as amended. Speaker CLARK was one of these. Before the final vote he said:

By an overwhelming vote this morning this House voted to adopt the system of the selective draft. I did all that I knew how honorably to prevent it, but when the House of Representatives has voiced its sentiments I go with it. [Applause.] I am going to vote for the volunteer amendment, and then I am going to vote for the bill at last.

The vote on this proposition was not a test of loyalty, patriotism, or Americanism. It has never been considered such a test by the President or anyone else acquainted with the facts. It was simply a difference of opinion as to method.

That the people of the Nation have never considered it such a test is clearly shown by the fact that a large number of the Members who voted for the volunteer system have no opposition for renomination, and several Members who voted that way and have had opposition have already been renominated.

There is not a district in the United States that would elect a man who is disloyal. The facts just recited show conclusively that a vote on this question was not made a test of disloyalty. To argue that it was a test of loyalty is to charge a majority of the voters of a large number of districts with disloyalty. It would be a malicious slander uttered by some evil-minded person, or a false statement made by some one unacquainted with the facts.

Among the Members who voted for the volunteer system are the gentleman from Missouri, Hon. CHAMP CLARK, Speaker of the House, second only to the President both in position and influence; the gentleman from North Carolina, Hon. CLAUDE KITCHIN, chairman of the Ways and Means Committee, Democratic floor leader, and the man on whom President Wilson strongly relies to raise the revenues with which to carry on the war; the gentleman from Tennessee, Hon. CORDELL HULL, author of the income-tax law and a member of the Ways and Means Committee; the gentleman from North Carolina, Hon. EDWARD W. POU, chairman of the Committee on Rules and one of the administration leaders in the House; the gentleman from Tennessee, Hon. FINIS J. GARRETT, a member of the same committee and an acknowledged leader in the House; the gentleman from Alabama, Hon. S. HUBERT DENT, Jr., the brilliant chairman of the Committee on Military Affairs; and the gentleman from Tennessee, Hon. LEMUEL P. PADGETT, chairman of the Committee on Naval Affairs, who has performed such splendid service in building up a navy.

Many others might be mentioned who have rendered great service to the Nation in this crisis. Really no one who knows those 109 gentlemen would hesitate to say that for intelligence, force of character, and patriotism they rank as high as any like number of men in Congress or anywhere else. So it was not lack of patriotism that caused them to vote for the volunteer system; nor was it want of force of character that caused them to vote for the bill after it was amended.

All of these gentlemen named voted for the bill on its final passage. All are Democrats. Not one of them has opposition. Several other gentlemen, who voted each time as they did, have had opposition in the recent primaries and have overwhelmingly defeated their opponents, thus proving that they were regarded as being entirely loyal.

The administrative features of the bill are so very familiar to the people of every county and probably every community that it is unnecessary to discuss them.

WAR-EXPENSE BILL.

On May 2, 1917, the House passed the war-expense urgent deficiency appropriation bill. The amount of money appropriated in it was approximately \$3,000,000,000. This sum included \$523,658,851 on account of the Navy and \$2,932,537,933 for the Military Establishment.

The chairman of the committee, Mr. Fitzgerald, stated to the House that a large amount of information was furnished to the committee of such highly confidential nature that it was deemed inexpedient from the standpoint of the public welfare to make public the testimony. This information, of course, came from the military and naval authorities.

As this money was to be spent for the public defense, and as the membership generally was willing and anxious to do every-

thing necessary for the defense of the Nation, the bill was discussed only a short time and was passed by 362 ayes and 1 nay.

Thus, again, the German Government was given to understand that there would be nothing left undone that was needed to defend the United States from her vicious and unholy attacks.

ESPIONAGE ACT.

The purpose of this bill may be briefly stated. It makes criminal certain acts that may injure the Government or give aid to the enemy and provides for the punishment of those acts. Obtaining or attempting to obtain any information relating to the national defense with the intent to injure, or with reason to believe it is to be used to injure, the United States; communicating to any foreign person or government any information relating to the national defense with the intent to injure this Government; making or conveying false reports or statements with intent to interfere with the operation or success of the forces of the United States, or to promote the success of its enemies or in any manner willfully obstructing the service by causing insubordination, mutiny, and so forth; concealing any person who has committed any offense under this act; interfering with shipping to foreign countries or injuring vessels engaged in foreign commerce; using the mails for the purpose of urging treason, insurrection, or forcible resistance to any law, are all made criminal offenses and punishable by severe penalties.

It provided for the seizure of arms or munitions of war when such articles are being, or are intended to be, exported in violation of war; and authorized the President to issue a proclamation prohibiting exportation of certain articles in the time of war.

It is not the object of this bill to restrict any American citizen in any just right he may have under the laws and the Constitution. Its purpose is to guard those rights, maintain and protect the general welfare of our American institutions, and insure the perpetuation of the Nation. It will not affect the law-abiding citizen. It will affect the criminal and those who seek to hinder our success in this war.

On May 16, 1918, section 3 was amended to read as follows:

SEC. 3. Whoever, when the United States is at war, shall willfully make or convey false reports or false statements with intent to interfere with the operation or success of the military or naval forces of the United States, or to promote the success of its enemies, or shall willfully make or convey false reports or false statements, or say or do anything except by way of bona fide and not disloyal advice to an investor or investors, with intent to obstruct the sale by the United States of bonds or other securities of the United States or the making of loans by or to the United States, and whoever, when the United States is at war, shall willfully cause, or attempt to cause, or incite or attempt to incite, insubordination, disloyalty, mutiny, or refusal of duty, in the military or naval forces of the United States, or shall willfully obstruct or attempt to obstruct the recruiting or enlistment service of the United States, and whoever, when the United States is at war, shall willfully utter, print, write, or publish any disloyal, profane, scurrilous, or abusive language about the form of government of the United States, or the Constitution of the United States, or the military or naval forces of the United States, or the flag of the United States, or the uniform of the Army or Navy of the United States, or any language intended to bring the form of government of the United States, or the Constitution of the United States, or the military or naval forces of the United States, or the flag of the United States, or the uniform of the Army or Navy of the United States into contempt, scorn, contumely, or disrepute or shall willfully utter, print, write, or publish any language intended to incite, provoke, or encourage resistance to the United States, or to promote the cause of its enemies, or shall willfully display the flag of any foreign enemy, or shall willfully utterance, writing, printing, publication, or language spoken, urge, incite, or advocate any curtailment of production in this country of any thing or things, product or products, necessary or essential to the prosecution of the war in which the United States may be engaged, with intent by such curtailment to cripple or hinder the United States in the prosecution of the war, and whoever shall willfully advocate, teach, defend, or suggest the doing of any of the acts or things in this section enumerated, and whoever shall by word or act support or favor the cause of any country with which the United States is at war or by word or act oppose the cause of the United States therein, shall be punished by a fine of not more than \$10,000 or imprisonment for not more than 20 years, or both.

SEC. 4. When the United States is at war, the Postmaster General may, upon evidence satisfactory to him that any person or concern is using the mails in violation of any of the provisions of this act, instruct the postmaster at any post office at which mail is received addressed to such person or concern to return to the postmaster at the office at which they were originally mailed all letters or other matter so addressed, with the words "Mail to this address undeliverable under espionage act" plainly written or stamped upon the outside thereof, and all such letters or other matter so returned to such postmasters shall be by them returned to the senders thereof under such regulations as the Postmaster General may prescribe.

BUREAU OF WAR-RISK INSURANCE.

In many cases when men are taken into the military service it works great hardships on those dependent upon them. Oftentimes when a soldier is drafted the only wage earner of the family is taken. It is in effect drafting the entire family. Consequently suffering and privation will follow.

It is right that the Government should provide in as large measure as possible for these dependents. By this bill it is proposed to make these hardships fall as lightly as possible. While the soldier is serving his country, he has the satisfaction of know-

ing that each month money is paid out of the Federal Treasury to his family in order that they may have food and clothing.

It has been my pleasure to assist scores of persons in securing the allotments and allowances granted under this law. The many letters containing expressions of gratitude for the service rendered in these matters has more than repaid me for the time and trouble taken. Doubtless every Congressman has had similar experience.

The Government has done the right, the humane, thing in making such provisions for insurance, allotments, and allowances. It has gone far beyond anything that was ever done by way of providing for the welfare of the soldiers and the care of their dependents. We are engaged in a great war; yet in the midst of it the thoughts of the representatives of the Government have turned toward the wife and child, the dependent father and mother, of the soldier. Their burdens have been lessened as much as may be by providing food and clothing for them. It is a ray of sunshine that breaks through the dark clouds and evidences not only the ability to recognize the needs of these people but also an earnest desire to meet those needs as far as can be done.

The bill provides for four things:

1. All soldiers and sailors are required to allot a certain part of their salary, not less than \$15 per month, to a wife or child, and they may make voluntary allotments to anyone else.

2. That the Government shall pay certain sums of money monthly to dependents of soldiers and sailors in addition to the allotment made by them.

Class A. In the case of a man, to his wife (including a former wife divorced) and to his child or children:

- (a) If there be a wife but no child, \$15.
- (b) If there be a wife and one child, \$25.
- (c) If there be a wife and two children, \$32.50, with \$5 per month additional for each additional child.
- (d) If there be no wife but one child, \$5.
- (e) If there be no wife but two children, \$12.50.
- (f) If there be no wife but three children, \$20.
- (g) If there be no wife but four children, \$30, with \$5 per month additional for each additional child.

Class B. In the case of a man or woman, to a grandchild, a parent, brother, or sister:

- (a) If there be one parent, \$10.
 - (b) If there be two parents, \$20.
 - (c) For each grandchild, brother, sister, and additional parent, \$5.
- In the case of a woman, to a child or children:
- (d) If there be one child, \$5.
 - (e) If there be two children, \$12.50.
 - (f) If there be three children, \$20.
 - (g) If there be four children, \$30, with \$5 per month additional for each additional child.

3. Compensation is provided for death or disability resulting from personal injuries suffered or disease contracted in the line of duty, as follows:

That if death results from injury:

If the deceased leaves a widow or child, or if he leaves a widowed mother dependent upon him for support, the monthly compensation shall be the following amounts:

- (a) For a widow alone, \$25.
- (b) For a widow and one child, \$35.
- (c) For a widow and two children, \$47.50, with \$5 for each additional child up to two.
- (d) If there be no widow, then for one child, \$20.
- (e) For two children, \$30.
- (f) For three children, \$40, with \$5 for each additional child up to two.
- (g) For a widowed mother, \$20. The amount payable under this subdivision shall not be greater than a sum which, when added to the total amount payable to the widow and children, does not exceed \$75.

This compensation shall be payable for the death of but one child, and no compensation for the death of a child shall be payable if such widowed mother is in receipt of compensation under the provisions of this article for the death of her husband. Such compensation shall be payable whether her widowhood arises before or after the death of the person and whenever her condition is such that if the person were living the widowed mother would have been dependent upon him for support.

If the death occur before discharge or resignation from service, the United States shall pay for burial expenses and the return of body to his home a sum not to exceed \$100, as may be fixed by regulations.

The payment of compensation to a widow or widowed mother shall continue until her death or remarriage.

The payment of compensation to or for a child shall continue until such child reaches the age of 18 years or marries, or, if such child be incapable because of insanity, idiosyncrasy, or being otherwise permanently helpless, then during such incapacity.

That if disability results from the injury:

(1) If and while the disability is total the monthly compensation shall be the following amounts:

- (a) If he has neither wife nor child living, \$30.
- (b) If he has a wife but no child living, \$45.
- (c) If he has a wife and one child living, \$55.
- (d) If he has a wife and two children living, \$65.
- (e) If he has a wife and three or more children living, \$75.
- (f) If he has no wife but one child living, \$40, with \$10 for each additional child up to two.
- (g) If he has a widowed mother dependent upon him for support, then, in addition to the above amounts, \$10.

To an injured person who is totally disabled and, in addition, so helpless as to be in constant need of a nurse or attendant such additional sum shall be paid, but not exceeding \$20 per month, as the director may deem reasonable: *Provided, however, That for the loss of both feet or both hands or both eyes, or for becoming totally blind or helpless and permanently bedridden from causes occurring in the line of duty in the*

service of the United States, the rate of compensation shall be \$100 per month: *Provided further*, That no allowance shall be made for nurse or attendant.

(2) If and while the disability is partial the monthly compensation shall be a percentage of the compensation that would be payable for his total disability equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less than 10 per cent.

4. It is provided that any soldier or sailor can purchase life insurance up to \$10,000. The rate is very low, practically \$8 per thousand. This insurance is not subject to the creditors of the beneficiary. The insurance shall be payable in 240 equal monthly installments. In case of death it shall be payable to a wife, child, grandchild, parent, brother, or sister. If the soldier receives total and permanent disabilities, he shall receive these payments.

FOOD AND FUEL BILL.

The purposes of this bill are stated in the first section, as follows:

That by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement, of foods, feeds, fuel, including fuel oil and natural gas, and fertilizer and fertilizer ingredients, tools, utensils, implements, machinery, and equipment required for the actual production of foods, feeds, and fuel, hereafter in this act called necessities: to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessities during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prescribed. The President is authorized to make such regulations and to issue such orders as are essential effectively to carry out the provisions of this act.

As appears from the above, the bill deals with foods, feeds, fuel, and articles required for their production. Provision is also made to facilitate and make available the channels of distribution; to prohibit the willful destruction of necessities that the price may be enhanced or the supply restricted; to prohibit hoarding; to prohibit injurious speculation; to reduce waste; to prohibit undue fluctuation of prices and unjust market manipulation; and to stimulate production of foods, feeds, and fuel.

The President is given power to require that full publicity be given to the methods and practices of those engaged in the importation, exportation, manufacture, storage, or distribution of all necessities as defined in the bill. He is also authorized to require that all persons so engaged shall have a license issued by the Government, and he may suspend any license whenever the person holding it shall make unfair, unjust, unreasonable, and discriminatory charges. He is empowered to requisition and take over any factory, packing house, pipe line, or mine whenever he shall deem it necessary to secure an adequate supply of necessities for the use of the Army and Navy. In order to stimulate the production of wheat, he is authorized to fix a guaranteed price at not less than \$2 per bushel. A bill now in conference proposes to increase this price.

An important feature of the bill is section 15:

SEC. 15. That from and after 30 days from the date of the approval of this act no foods, fruits, food materials, or feeds shall be used in the production of distilled spirits for beverage purposes: *Provided*, That under such rules, regulations, and bonds as the President may prescribe, such materials may be used in the production of distilled spirits exclusively for other than beverage purposes, or for the fortification of pure sweet wines as defined by the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916. Nor shall there be imported into the United States any distilled spirits. Whenever the President shall find that limitation, regulation, or prohibition of the use of foods, fruits, food materials, or feeds in the production of malt or vinous liquors for beverage purposes, or that reduction of the alcoholic content of any such malt or vinous liquor, is essential, in order to assure an adequate and continuous supply of food, or that the national security and defense will be subserved thereby, he is authorized, from time to time, to prescribe and give public notice of the extent of the limitation, regulation, prohibition, or reduction so necessitated. Whenever such notice shall have been given and shall remain unrevoked no person shall, after a reasonable time prescribed in such notice, use any foods, fruits, food materials, or feeds in the production of malt or vinous liquors, or import any such liquors except under license issued by the President and in compliance with rules and regulations determined by him governing the production and importation of such liquors and the alcoholic content thereof. Any person who willfully violates the provisions of this section, or who shall use any foods, fruits, food materials, or feeds in the production of malt or vinous liquors, or who shall import any such liquors, without first obtaining a license so to do when a license is required under this section, or who shall violate any rule or regulation made under this section, shall be punished by a fine not exceeding \$5,000 or by imprisonment for not more than two years, or both: *Provided further*, That nothing in this section shall be construed to authorize the licensing of the manufacture of vinous or malt liquors in any State, Territory, or the District of Columbia, or any civil subdivision thereof, where the manufacture of such vinous or malt liquor is prohibited.

The President is fully authorized to prohibit the manufacture of all malt and vinous liquors for beverage purposes. In the exercise of his discretion, he has not seen proper to prohibit

absolutely such production, although he has greatly reduced the alcoholic content of such liquors.

Section 16 authorizes and directs the President to commandeer any or all distilled spirits in bond or in stock for redistillation in so far as may be necessary to meet the requirements of the Government in the manufacture of munitions and other military and hospital supplies, or in so far as redistillation would dispense with the necessity of utilizing products and materials suitable for foods and feeds in the future manufacture of distilled spirits for the purposes enumerated.

Every nation that is at war has found it necessary to regulate the production, distribution, and consumption of food and fuel. It is absolutely necessary for us to do this. In many instances, perhaps, individual hardships have followed the administration of this measure. But the general good must be considered. There is no doubt but what, in that light, no one will deny that much good has been done.

FOOD-SURVEY ACT.

A companion piece of legislation to the food-control act is the food-survey act. They were both signed on the same day.

It was necessary to take stock of our agricultural resources and the articles used in the production of foodstuffs. The Secretary of Agriculture was authorized to investigate and ascertain the demand for, the supply, consumption, cost and prices of, and the basic facts relating to the ownership, production, transportation, manufacture, storage, and distribution of foods, food materials, feeds, seeds, fertilizers, agricultural implements and machinery, and any article required in connection with the production, distribution, or utilization of food.

The Secretary was authorized, in case he should find that in any restricted area there was special need for it, to purchase seeds suitable for the production of food or feed crops and to furnish them to farmers at cost.

Appropriations were made for the prevention, control, and eradication of the diseases of live stock; the enlargement of live-stock production; the prevention, control, and eradication of plant diseases injurious to agriculture; for procuring, storing, and furnishing seeds; for increasing food production, eliminating waste, and conserving food, and for other like purposes.

REHABILITATION OF WOUNDED SOLDIERS AND SAILORS.

While a large number of soldiers will be wounded, the percentage of those who will be badly maimed and injured as compared with the total number of men engaged in the war will be small. Statistics of the war show that about one man in every hundred is badly maimed or wounded.

It will be possible to retrain a large percentage of these men, so that they may engage again in gainful occupations. All the leading belligerent nations of the world are retraining their disabled men with the exception of the United States. Within the past few days a bill has passed both the House and the Senate providing for such training.

The reasons assigned for vocational re-education of disabled soldiers and sailors are:

1. To insure economic independence.
2. To avoid vocational degeneration.
3. To prevent exploitation.
4. To conserve trade skill.
5. To insure national rehabilitation.
6. To adjust supply of labor to demand.
7. To develop new vocational efficiency.

In other wars when a soldier returned home badly wounded he had to begin life anew without aid and battle along as best he could under his changed condition. Under this bill, if he needs and desires it, he can be trained for some special work that it is thought he may become fitted for. During his course of training he will be entitled to receive monthly compensation equal to the amount of his monthly pay for the last month of his active service. During that period his family will receive the amount of his compulsory allotment and the family allowance granted under the war-risk insurance act.

It is estimated that the list of occupations for which vocational training may be given in the United States numbers more than 500.

LIST OF TRADES FOR WHICH INSTRUCTION HAS BEEN GIVEN IN FRANCE TO WOUNDED SOLDIERS.

AGRICULTURE.

Manager, gardener, agricultural mechanic, tillers of the soil, vineyard cultivators, supervisors of cultivation, breeders, shepherds, forest guards, workers in cheese factory, milkmen, woodcutters.

COMMERCE.

Storekeepers, copyists, delivery men, errand boys, commercial travelers, barbers, motion-picture operators, architects' assistants, mechanical draftsman, librarian, bookkeepers, case packers, postal carriers, tax collectors, grocers, cashier, invoker, typist, stenographer, hospital attendant, coroner, salesman, hotel clerk, elevator operator, newspaper

editor, head road worker, market inspector, telephone operator, bank employees, policeman, interpreter, insurance agent, baggage-master, employee in mayor's office.

CONSTRUCTION.

Building painters, masons, plumbers, painter-decorator, electrician, building inspector, glazier, roof plumber, letter painter, marble-worker.

WORKERS IN METAL.

Mechanic, inspectors, jewelers, workers in precious stones, bridge maker, metal sawyers, aeroplane makers, locksmiths, welder, borers, electricians, optician, stipplers, mechanical engineer, hydraulic pressman, blacksmith, autogenous welders, riveters, dental mechanicians, turners, sheet-iron worker, tinsmith, engraver, watchmaker, stoker, tool distributor, drop forgers, coin cutters, metal turners, gear mounters, tin coppersmith, automobile mechanic, smelters, drivers of tool machines, machinist's helpers, bronze setter, gem setter, pewter welder, metal-design cutter.

TEXTILES.

Weaver, tapestry designer, tailor, cap maker, carpet makers, cutters, umbrella maker, sock maker, upholsterer, maker of pearl flowers.

CHEMICAL INDUSTRIES.

Perfumer, gas fitter, laboratory helper, soap maker, oil maker, refiner, liquid air maker, chlorates maker, powder maker, maker of chemical products, candle maker, lacquer maker, bone sorter, manufacturer of matches, manufacturer of tobacco.

PAPER MAKING.

Paper-machine operator, paper maker, stamper, operator of vulcanizing machine, manufacturer of caoutchouc.

LEATHER, HIDES, AND SKINS.

Shoemaker, hide worker, fur dresser, saddle maker, harness maker, morocco tanner, leather dresser, hide worker, tanner.

TRANSPORTATION.

Automobile chauffeur, garage employees, mechanic for subway, delivery drivers, railway employees, wireless telegraphers, supervisors of omnibus service, carriage washers, conductor for motor truck, machinists in street-cleaning service, meter readers.

WOODWORKING TRADES.

Carpenters, worker in can factories, basket makers, worker in toy factory, worker in piano keys factory, wood turners, wood varnishers, orthopedic carpenter, wooden-shoe maker, worker in broom factory, weaver of matting, cabinetmaker, wood varnisher, ivory sculptor, grainer, sawyer, cooper, wheelwright, piano repairer, high-class brush maker, maker of ivory articles, painter of aeroplanes, cartwright.

DOMESTIC SERVICE.

Concierge, valet, porter, watchman, cook, wardrobe keeper, general servant.

BOOK TRADE.

Printers, linotypists, compositors, proof reader for music, bookbinders, engravers, technical editors, pressmen, stereotyper, machine operator, industrial photo copyist, photographers, letter-press printer.

VICTUALING.

Waffle cook, wine-cellar man, chocolate maker, hotel waiter, pastry cook, distiller, restaurant keeper, cannery, sausage maker, bone remover, biscuit maker, pork butcher, baker.

MISCELLANEOUS.

Stone sculptor, mine worker, glass blowers, shopmen, clerks, errand boys, grooms, packers, porters.

ENGLAND.

England has organized a system of placement through which the retrained man is placed in a definitely organized trade under an apprenticeship arrangement. So far the training and placement covers the following trades:

Electrical trades; tailoring; leather trades; furniture trade; boot and shoe repairing; hand-sewn boot and shoe making; gold, silver, jewelry, and watch and clock jobbing; trade employment in moving pictures and theaters; trades connected with motor-tractor work; aircraft manufacture; dental mechanics.

In addition, the ministry of pensions has published the following list of occupations suitable for discharged tubercular sailors and soldiers:

Basket making, bath chairman, bus and tram conductors, canvassers, caretaker (if not compelled to sleep in unhealthy basements), drivers, coachmen, commissionaires, carpenters and joiners, farm laborers, foresters and underforesters, fishermen (line fishing only), gamekeepers, general laborers (except very heavy and dusty jobs), hawkers, insurance and commission agents, light porters, lodge porters, market and flower gardeners, motor cleaning, motor tractor and van drivers, night watchmen, park rangers, park attendants, policemen, postmen (if already in one of these services), rent collectors, station-bookstall attendants, travelers, timekeepers, ticket collectors, window cleaning, woodmen to be employed if the afforestation scheme is carried out, and wood-road layers.

Canada has established carefully worked-out courses preparing disabled men for the following lines of employment:

Motor mechanics; elementary electrical engineering; carpentry and building construction; cabinetmaking; machine-shop practice; plumbing, heating, and pipe-fitting; electrical construction; motion-picture operating; architectural and building construction; machine drawing; horticulture; agriculture, poultry culture, and similar lines.

BELGIUM.

Belgium has established a great school for vocational rehabilitation at Port-Billez, France. Here the Belgian Government has provided training for these lines:

Baking, basketry, bookbinding, box nailing, brush making, cabinet-making, chauffeurs, electricians, engraving, furriers, industrial art workers—designing and drawing, laboratory work, leather work—shoe-making, saddle and harness making, lithography, mechanical drawing, metal work, zinc plumbing, clock making, modeling, painting, photography, planing, printing, sculpture, tailoring, telephone exchange, wig making, woodcraft—polishers, toy and fancy article making, wood carving, wooden-shoe making, mechanical joinery, hand joinery, tool making, modelers, wood turning.

The success of the vocational rehabilitation given by foreign countries is indicated by a number of things: The increasing appropriations for the work, the enlargement of facilities, and the constantly increasing

number of disabled men being trained and placed show that foreign governments have found the scheme advisable and necessary. As a result of enthusiastic interest in the problem, English manufacturers and trade-unionists have organized trade committees throughout Great Britain, which are cooperating with the minister of pensions in organization, courses of study, and placement, on an apprenticeship basis, of the retrained men. In France, up to December 1, 1916, the employment office in Paris had placed approximately 10,000 disabled soldiers. Up to October 1, 1916, 45 departmental and local committees had placed 5,550 disabled. About 1,500 were placed with State establishments under ministry of armament munitions; about 3,000 working in shops for national defense. Germany uses successfully 85 to 90 per cent of her disabled back of the lines when they have been retrained, and the majority of the remaining 10 or 15 per cent are entirely self-supporting. This should be the aim of any system of vocational rehabilitation undertaken by this country.

The purpose of this legislation appeals to us all. Its humane aspects are apparent and undeniable. Our obligation to give all the aid and assistance possible is clear. It is also a wise business venture on the part of the Nation to thus conserve all its human resources. The reasons for this legislation are so strong that it passed unanimously.

ARMY APPROPRIATION BILL.

This bill was passed in the House on May 31, 1918. It carried a larger sum of money than was ever appropriated in any single bill by a legislative body. It provided for the expenditure of more than \$12,000,000,000.

Never was an Army so well paid, equipped, and fed as the Army of the United States. This accounts for such vast expenditures. The pay of the soldier has been doubled, his equipment is of the best material, and his supply of food is ample and of good quality.

As everyone is anxious to do everything necessary to win the war and win it as quickly as possible, and to make the best possible provision for our fighting forces, this bill, although the amount of money that it carries is staggering, was passed unanimously. Again the German Government was given to understand that the entire resources of the Nation, if necessary, would be used to protect our lives, our homes, and our civilization against the assaults of our enemies.

WAR REVENUE BILL.

There is now in course of preparation a bill to provide for the raising of the revenues of the Government. It is sometimes difficult to place the burdens of taxation where they justly belong. Those who are best able to pay taxes oftentimes very largely escape these burdens.

It is evident now from the signs of the times that there will be a determined effort to have taxes raised from sources that have heretofore, to a great extent, failed to pay their just share. The burdens of taxation are already heavy on the ordinary sources from which revenue is derived. We will turn more strongly to war profits, incomes, and luxuries for revenue.

There should be no profiteering at this time. Those who remain at home in ease and safety should not be permitted to become grossly rich as a result of this war. Those who fight make sacrifices that hurt. Those who stay at home and carry on large business enterprises should also be required to make sacrifices as well. It ought to be so arranged that when the war is over no man can be pointed out as one who got rich as a result of the war.

The income-tax rate should be high enough to prevent this. Statistics show that many large corporations are making money by the multiplied millions. Of course, it would not be good business sense to take all profits above a certain per cent, because to do this would destroy all incentive to develop the business to its highest profit-making capacity. The rate should be fixed on a percentage basis of the profits, and it should be very high.

We will cut out profiteering. No patriotic citizen can have any patience with the profiteer. He is a public enemy and should be held in as much contempt and dealt with as a traitor to his country.

SOME WAR MEASURES PASSED BY THE PRESENT CONGRESS.

War bonds, seven billions, authority to issue.
Assignment of Fleet Naval Reserve to active duty.
For extension of minority enlistments, naval service.
Increase of midshipmen at Annapolis.
Increase age limit for officers, Naval Reserve.
Relating to foreign enlistments in United States.
Army appropriations.
War Army bill, draft and selective service.
Relating to enlistments in Naval Reserve Corps.
Increase enlisted strength of Navy and Marine Corps.
Military Academy appropriations.
Car-service regulations.
War-risk insurance for seamen.
Sundry civil appropriations.
Issuance of rifles to State troops.

Army and Navy deficiency appropriations.
 Suppression of espionage.
 Condemnation of land for Army.
 Aeronautics personnel and appropriations.
 Relief of homesteaders in military or naval service.
 Protection of desert-land entrymen in Army or Navy.
 Increasing membership, Interstate Commerce Commission.
 For priority of railroad shipments and control of train service.
 Food-survey authorization.
 Food-control authorization.
 War bonds, authority for second liberty-loan issue.
 Creating Aircraft Board.
 Authority to explore for nitrates and potassium.
 War-revenue measure.
 Providing repatriation of citizens in armies of allies.
 Urgent deficiency measure appropriating \$5,356,666.016.
 Allowing dependents to receive pay while absent abroad.
 Regulating use of explosives during war.
 Providing for property lost by seamen.
 Permission to take public-land affidavits before military authority.
 Permitting coastwise trade by foreign vessels.
 Providing six months' gratuity to dependents of deceased sailors in the Navy.
 Providing commissions in Army Staff Corps and removing age limits of Reserve Corps officers requiring discharge.
 Prescribing court-martial procedure in Navy.
 Appointing chaplains at large in Army.
 Preventing publication of military inventions.
 Relating to Medical and Dental Corps.
 Establishing new rating for enginemen, blacksmiths, etc., in Navy.
 Distribution of Cavalry units in Army, providing for.
 Providing military and naval insurance.
 Regulating trading with enemy.
 Appropriation to continue \$100,000,000 fund to be used by the President, and for other purposes.
 Increasing Naval Academy enrollment.
 Authority for absence of homesteaders during war for farm-labor requirements.
 Authority to call Philippine forces into war service.
 Authority for marines to serve under Dominican Republic.
 Providing for housing and lands for shipyard and munition workers, \$50,000,000.
 Civil-rights law for soldiers and sailors.
 Authority to grant furloughs in Army for agricultural and other necessary pursuits.
 Railroad-control law.
 Urgent deficiency appropriations (second session) on account of war expenditures.
 Providing disposal of effects of deceased sailors.
 To pay gun pointers and captains in Navy while absent.
 Authority to appoint as officers, Philippine Scouts.
 Restoring discharged enlisted men to former grades if discharged to accept commissions.
 Authority to discharge recalcitrant Navy officers.
 Reducing instruction period at Naval Academy to three years.
 Third liberty loan authorization.
 War Finance Corporation law.
 To appoint additional Assistant Secretaries of War.
 Regulating pay of retired chief warrant officers, Navy.
 To promote export trade.
 Providing for quarters for officers in field or abroad.
 Delegating powers for suppression of espionage among women enemy aliens.
 Relating to military training in colleges and to reserve officers' training camps.
 Allowing indemnities to France for damages caused by American forces.
 Preventing interference with use of homing pigeons.
 Sabotage law, preventing destruction of war materials, etc.
 To pay traveling expenses in Army when "on duty under competent orders."
 To promote officers temporarily when filling vacancies of officers to higher grades in Regular Army.
 For transportation of shipyard employees.
 Appropriating \$1,000,000 for ordnance testing in Navy.
 Authorizing President to sell supplies, equipment, etc., acquired or manufactured by the United States incidental to the war.
 Regulating the officering and manning of vessels subject to the inspection laws of the United States.
 Authority to seize enemy vessels.
 Authority to Red Cross to erect temporary building.
 Permission to War Department to erect building on Smithsonian Grounds.

Relating to eligibility of retired Army engineer officers.
 Extending time for Niagara water diversions.
 Excusing soldiers and sailors from assessment work on mining claims.

Suspending labor requirements of owners of mining claims during war.

Authorizing land purchase by Ordnance Bureau, War Department.

Extending effective date of section 10, Clayton antitrust law. Garabed energy-generator tests authorized.

Extending time for filing applications under soldiers' insurance act.

Permitting outside applicants to take civil-service examinations in the District of Columbia.

Allowing applications for war-risk insurance by soldiers' relatives.

Appropriations for the Army.

Rehabilitation of soldiers and sailors.

There have been more than 100 laws, denominated war measures, enacted during the Sixty-fifth Congress. Every measure that was claimed to be necessary in winning the war has passed.

POWERS GRANTED THE PRESIDENT.

The President is made by the Constitution Commander in Chief of the Army and Navy. Recognizing that he is the head of our fighting forces, Congress has granted him every power that he has said is necessary to be granted in making our arms effective and efficient. It is a fact that the affairs of Government can not be carried on in time of war as they can in time of peace. Therefore Congress has not hesitated to grant extraordinary powers that would not have been granted but for the present condition. That we must have some one at the head of affairs clothed with unusual powers and large discretion is obvious, and President Wilson has been accorded every authority that he has asked.

The powers given under the railroad-control bill, the food-control bill, the bill providing for the consolidation of executive bureaus, and many others carry extraordinary and unusual authority; but this is necessary at this time, and the authority has been given almost without pause. Of course, the right to exercise these powers will end with the war period, or soon thereafter.

WE WILL WIN THE WAR.

Congress has recognized the necessity for prompt, earnest action. The resources of the Nation are being mobilized for effective use. The people of the Nation are awake to the importance of the situation. They are responding generously and nobly to the demands made upon them. They agree with William Jennings Bryan when he said:

We must win. Defeat is inconceivable; it would be indescribably unfortunate if it were possible. We can not allow any foreign nation to determine the destiny of the United States, especially a nation committed, as Germany is, to arbitrary government and militarism.

The quickest way to peace is to go straight through, supporting the Government in all it undertakes.

We must win.

Mr. Bryan, like every other good citizen, regretted deeply that war came to the United States, but since it did come he realizes that each one must render his full duty and help to hasten the end of the war by doing his duty.

Each one can render some service. Each one has a vital interest in the outcome of the war. Surely in this hour of danger no one will fail to respond to the needs and demands of the hour.

Germany must not win! Germany can not win! Free government shall not perish from the earth! Liberty, the priceless heritage of mankind, shall not be destroyed! Our civilization shall not be crushed out! German doctrines shall not replace those that we love and revere!

Shall Germany win? No; we will not submit to a nation that believes in the things that are taught in Germany. There is taught the right of might rather than the might of right. Might is placed above right, force above love, war above peace.

Bernhardi says:

Might is supreme over right, and the dispute as to what is right is decided by the arbitrament of war.

Trutschke says:

The small nations have no right to existence and ought to be swallowed up.

Again Bernhardi says:

The Germans must, regardless of the rights and interests of other peoples, fight their way to predominance and force upon human German kultur and spirit.

One of the "Ten Commandments" of the German soldier, as stated by Von der Goltz, is:

War is not a work of charity, and in the soldier's heart there is no compassion. The soldier must be hard. It is better to let a hundred women and children belonging to the enemy die of hunger than to let a single German soldier suffer.

The Kaiser says:

When he is about to conclude a treaty with a foreign power, if a sovereign remembers he is a Christian he is lost.

Phillipi says:

We have become a nation of wrath; we think only of war.

As Mr. Bryan said:

It is unthinkable that we shall be conquered by such a people.

This legislation referred to shows that the Congress has done everything in its power to preserve the Nation in so far as the enactment of laws and the granting of ample powers to the President are concerned. There is no doubt as to the patriotism and loyalty of the people of the Nation. They deplore the fact that war was thrust upon us, but they will fight unto the end in defense of home, family, and country.

The Selective-Draft Law Amendment.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BANKHEAD,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 23, 1918.

Mr. BANKHEAD. Mr. Chairman, I regret very much that I can not agree with the amendment to the selective-draft bill presented by the Committee on Military Affairs, which is now before this body for consideration. My regret is increased by the fact that I have heretofore since the declaration of war consistently supported all measures indorsed by the War Department and the administration looking to the mobilization of our resources and our man power for the prosecution of the war. I am still anxious and willing to do anything and everything imperatively necessary as the war progresses to secure a speedy and triumphant end of hostilities and a victorious peace. But, sir, in my judgment, the time has not yet arrived when our military requirements make it necessary to draft boys under the age of 21 years for overseas duty. I am opposed to drafting men under 21 years of age, at least until it is shown that such action is necessary to raise the Army to the strength desired by the General Staff and the Secretary of War. I had prepared an amendment to the pending bill striking out 18 years and inserting 21, so that the bill would draft only men between the ages of 21 and 45 years, but I understand that my colleague from Alabama, Mr. BLACKMON, will present such an amendment, and it has my unqualified support. I am opposed to drafting men under 21 years now for a number of reasons.

As a matter of principle I doubt if it is morally right to draft boys into the military service until they reach their majority and are entitled to vote, to make contracts, and to manage their own affairs. Under 21, by law, they are classed as infants, and have no voice in the Government or the selection of their Representatives. They can not even vote to ratify or censure our action here to-day by which we are proposing to subject them arbitrarily to the most rigorous service—that of a soldier in arms. They are not invested with either the privileges or responsibilities of adult citizenship.

If it were apparent, or reasonably so, at the present time that the induction into service of young men under 21 was an absolute necessity in order to raise our Army to 5,000,000 men, it would be a different problem, and I would cheerfully acquiesce in the demand for their service, feeling, as I do, that we must and will do everything necessary to win the war, however great the sacrifice may be; but it is admitted that between the ages of 31 and 45 there are over 11,000,000 men in the country who will register for the draft. Gen. Crowder, the Provost Marshal General, says he can get 600,000 single men out of that number. Why does he propose to take only single men under this new draft law? Under the existing law, calling men from 21 to 31, the War Department has not only drafted single men but also hundreds of thousands of married men. Why not apply the same rule under the new law as now proposed, especially married men with no dependents? If 3,000,000 men have been raised from the ages of 21 to 31 I see no reason to doubt that 2,000,000 more could be obtained between the ages of 31 and 45, and leave the boys at home.

There is another reason why I think it unwise to draft the young men between the ages of 18 and 21 now that should not be overlooked by Congress. Already there is the greatest shortage of labor, especially upon the farms of the country. I know that in my district that it is with the greatest difficulty that enough labor can be gotten to gather the crops planted this year.

Many soldiers from my district who are now in the camps left crops in the fields at home which in many cases will go to waste. The boys under 21 years old are now the main reliance for extra labor on our farms, and I fear the result next year if these, too, are put into military service and taken away from the farms.

There is yet another phase of the matter that should be considered, and that is that the proposed law would deprive very many of our ambitious young men of the privilege of finishing their high-school and college education. We should not be blind to the fact that after this war is over we will need a generation of educated men to take the places of those who will be lost in battle or who will not for one reason or another return to their old homes.

For the reasons stated and many others both of fact and sentiment which might be stated, I will vote to exempt young men under 21 years old from the draft at the present time. Congress will be in continuous session from now on, and if we should find that the necessary number of men is not forthcoming from men over 21, then we can very speedily lower the age limit to meet the required quotas. For the present I regard it both unwise and unnecessary to include in the draft young men under 21, except such as may volunteer with the consent of their parents, as they may do under existing law.

The Voice of Labor.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 2, 1918.

Mr. CARY. Mr. Speaker, the roar of artillery and the clash of arms, the frantic hatreds and the unloosing of the forces of death and destruction which are holding the world in war's bloody thralldom to-day must come to an end some time. War, whether we call it good or evil, has never more than a short and bloody course to run, for it is a destructive agent, and when it has accomplished the elimination of that which it has set out to destroy it ceases for lack of further objective. We have set out to purge the world of the tyranny of brute force, to eliminate autocracies, and to make of God's footstool a green and fruitful garden of liberty, where men may labor and live in peace and security, where love shall take the place of hate, and where those "other sheep who are not of the pasture shall hear the Shepherd's voice and follow Him, and there shall be one Shepherd and one sheepfold."

In that bright and glorious day for which our President in a letter full of significance recently bade us prepare the forces latent in humanity which are to-day being used to destroy will then be employed in the better task of construction, and Labor Day will have gained a new and greater meaning, for the world will at last fully realize that without labor there can be no constructive work and that the only real and lasting good that can come to man must come by way of the man who works. The day of the fighter, the day of the exploiter, the day of the destroyer will come to an end simultaneously, and the man who seeks to achieve success without labor will be thrown on the scrap heap of forgotten things along with the tinsel crowns and worn-out thrones that have cumbered the world too long. Let us therefore on this Labor Day pause just for a minute from thinking of "war's wild alarms" and pay a moment's tribute to labor.

Did you ever stop to think what would happen if labor ever quit the job?

The old world would go rumbling along very comfortably if every soldier stopped fighting. Nobody would suffer much if every band stopped playing and the sound of martial music was heard no more. It is conceivable that this good old country of ours would worry along for quite some time if Congress stopped legislating, but if labor quit the job for 48 hours the world would starve to death or die of thirst.

It is therefore meet and proper, without detracting in any way from any noble or brave achievement, without stopping for a moment in the pressing job we have on hand across the water to remember that back and behind the future progress of the world the compelling force that will move humanity to higher endeavor and grander achievement is and will be labor and not until labor comes into its own, not until the world recognizes the dignity and authority of labor will the world be truly and finally democratic.

Woman Suffrage.

The citizen who has neglected to raise his voice in his Government at the polls has forfeited the right to raise his voice against its mistakes and abuses.

Declare your principles and be ready to fight for them both within and without the party.

EXTENSION OF REMARKS

OF

HON. ADDISON T. SMITH,
OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 17, 1918.

WIN THE WAR—THE NATION'S SUPREME PURPOSE.

Mr. SMITH of Idaho. Mr. Speaker, the whole Nation is united to-day in one supreme purpose—to win the war. About this purpose there can be no two opinions. The national life and wealth to the last ounce are pledged to its accomplishment.

THERE CAN BE NO PARTISAN PATRIOTISM.

There can be no partisan patriotism. Every American citizen is back of the Government in the great task in hand. Occasional difference of opinion as to ways and means of achievement does not mean difference in purpose. The question of loyalty or disloyalty is not a matter for political parties, but for courts. Parties are concerned with policies, expedients, and principles. There can be but one loyalty—to the country, and one purpose—victory.

DOMESTIC AND CIVIC PROBLEMS IMPORTANT TO NATIONAL AIM.

But while interest is centered in the big international struggle we must not forget that there are domestic and civic problems to be settled not less but more vital to the public welfare because we are at war—the health and education of children, the wages and working conditions of fathers and mothers in industry, the protection of young men and women from vicious social conditions, the high cost of living, taxes, food conservation, tariff and trade conditions, and many another such matter.

THEIR JUST SOLUTION A PART OF THE WAR FOR DEMOCRACY.

A just solution of these problems is a part of the fight for democracy that is continuously waging. For democracy in its big sense—a government of the people and by the people and for the people—is not a matter of one big fight; it comes gradually through many a struggle, civil as well as military, and is slowly building, step by step, as human minds broaden and human visions clear. Public education, women's suffrage, child-labor laws, workmen's compensation, and countless other measures of public justice have been won in this way.

THE DUTY OF EVERY CITIZEN TO TAKE STAND.

About such civic problems there are many opinions and policies, and it is our duty as citizens to take some stand in regard to them. And when we have made up our minds that certain things are for the welfare of the child, the home, or the country we should then consider the best way of getting them done.

GROUP ACTION ALONE IS EFFECTIVE.

Individuals are most effective for social service when acting in groups united on fundamental principles, though they may differ on matters of detail and expediency.

THE POLITICAL PARTY THE LEGAL AND CUSTOMARY MECHANISM.

For this reason belief in the principles and conduct of government is best expressed through political parties. Recognizing this truth, the State has passed laws regulating elections through party mechanism.

Independent action is futile, an isolated vote negligible. The only way to get your ideas embodied into law is to elect legislators and other officials who want what you do. And the only way you can do that is to vote with a large number of people who believe in the same measures and the same candidates that you do.

Since party action is the legal and efficient method of individual participation in government, our first duty is to consider with what party we can align ourselves on broad principles.

WHAT CAN YOU BRING TO THE PARTY?

And the party is just as much concerned in your principles as you are in its principles—perhaps a little more so—for from you it seeks new strength, the strength of high ideals and firm resolves; of a just mind alive to the needs of the hour; of energy and devotion to the common good. Do not expect the party to be better than the men and women who compose it. If it is not what you think it ought to be, perhaps you are giving it less than your best. Not what can I get from the party but

what can I bring to it should be the first thought of every patriotic citizen.

Now is the time for the women of America to make themselves felt in affairs of State more directly and purposefully than they have ever done before, for never before has the country so needed the intelligence and devotion of every citizen in every task of public service.

ETERNAL VIGILANCE IS THE PRICE OF FREEDOM.

While we are spending so lavishly of blood and treasure to make the world safe for free governments, it would be a sad blunder to lose the freedom or security of a single cherished institution at home. And let us remember that eternal vigilance is the price of freedom. Free governments are not guaranteed by written constitutions and statutes unless these in turn are protected from stupidity and greed by the living loyalty of men and women.

FRANK DISCUSSIONS AND REGULAR ELECTIONS THE SAFEGUARD OF LIBERTY.

If our Nation is to survive the test of this world upheaval, if democracy is to vindicate itself as a righteous and workable form of government, it must be by a sound and searching application of its principles at this crisis, and not by a desertion of its essential quality, namely, of government by the people as expressed through free discussion and regular elections.

THE REPUBLICAN PARTY'S RECORD.

The record of the Republican Party is its best claim to support from those citizens who would see their constitutional rights secured and the fundamental principles of American freedom maintained. Its history shows a record of sound and constructive statesmanship in both national and international affairs.

Its policies are national, not sectional; its leaders men of vision and integrity, whose aim is the welfare of the whole people, and not that of a class or group.

NEW MEASURES FOR NEW TIMES.

Holding fast to principles that are tried and true, it still is quick to meet new conditions with new measures, and seeks justice in facts rather than in precedents.

THE PARTY FOR THE WOMEN; THE WOMEN FOR THE PARTY.

It is just such a party that women with high ideals and splendid energies need to make them effective for the public good; and it is just such women that the party needs to bring new views to sound experience.

Living parties are like living rivers, continually taking on new strength from many sources. New waters keep the river strong and pure to nourish life in the valleys, to turn wheels of power for industry, to bear cargoes of freight for distant needs. But without a guiding channel the purest waters in the world would become diffused waste or destructive flood. Party organization is the channel through which human intelligence and energy become effective in affairs of state.

REPUBLICAN MEASURES AND POLICIES TOUCHING WOMEN AND CHILDREN.

A few concrete examples of Republican acts and measures touching women and children are eloquent evidence of the guiding power and sound policy of the Republican Party.

Republicans established the Children's Bureau under the administration of President Taft and appointed Miss Julia Lathrop chief of the bureau, the first woman ever made chief of a Government bureau.

Republicans sent the first woman to Congress, the Hon. JEANETTE RANKIN, of Montana.

WOMAN SUFFRAGE.

The comparative records of the Democratic and Republican Parties on the suffrage amendment under the Wilson administration.

FIRST ADMINISTRATION.

IN THE SIXTY-THIRD CONGRESS, FIRST SESSION.

[Both Houses of Congress Democratic.]

DEMOCRATIC.

House: Democrats caucused against suffrage. (Feb. 3, 1914.)
Senate: Suffrage amendment defeated by 11 votes for lack of support by President and party in power, only 35 per cent of Democrats voting for it. (Mar. 19, 1914.)

President: Refused to support national amendment.

REPUBLICAN.

House: In minority, and therefore unable to initiate action.
Senate: Sixty per cent of Republicans voted for amendment.

IN THE SIXTY-THIRD CONGRESS, SECOND SESSION.

DEMOCRATIC.

House and Senate: Refused to allow suffrage to be brought up.
President: Refused to support national amendment.

REPUBLICAN.

In minority, and therefore unable to initiate action.

IN THE SIXTY-THIRD CONGRESS, THIRD SESSION.

<p>DEMOCRATIC.</p> <p>House: Suffrage amendment defeated for lack of support from President and party in power, only 31 per cent of Democrats voting for it. (Jan. 12, 1915.)</p> <p>Senate: Refused to allow suffrage to be brought up.</p> <p>President: Refused to support national amendment.</p>	<p>REPUBLICAN.</p> <p>House: Sixty-four per cent of Republicans voted for amendment. If as great a proportion of Democrats as Republicans had voted for suffrage at this time it would have passed. Without stronger support from the Democrats, the vote of every other Member of the House would not have passed it.</p>

The Significance of German Efforts Toward World Dominancy in Commerce.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 6, 1918.

Mr. FESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following:

ADDRESS OF HON. S. D. FESS TO THE OHIO BANKERS' ASSOCIATION, COLUMBUS, OHIO, SEPTEMBER 4, 1918.

Mr. President, Gov. Cox, members of the Ohio Bankers' Association, and ladies and gentlemen. When a few weeks ago I was honored by your invitation to address you, I suggested the theme as announced, the "Situation as it now appears to me." At that time events were running heavily, as it appeared, against the allies. We had seen the great German drive pushing toward the city of Paris and the channel ports by the powerful impetus of a reinforced German man power on the western front through the collapse of the Russian Army and the delivery of Russia and Russian resources so far as it could be done by the treasonable Bolshevik leaders.

At that time the central powers had at least 30 divisions more than the allies. But events have changed since then. We now see clearly what at that time could not be well understood. Gen. Foch gave territory, but not important bases, in exchange for Germans. It is now estimated that the four drives lost the central powers at least 1,300,000 man power.

Three days after the fifth and last German drive began the counter offensive by Foch was started. It began on July 18. It has never for an hour from that date ceased hammering and forward moving. To-night our forces are advancing on more than 150 miles of front. More than three-fourths of the lost territory from March 21 to July 18, four months, has been retaken in six weeks which has netted over 140,000 German prisoners and uncounted German dead. The old Hindenburg line, thought to be impregnable, has been pushed back in at least four places. Only Lille, Duai, Cambrai, Laon, and Ham remain to complete the line. Indications are these will be taken soon. We now know the state of the German morale. Even

its break is reaching from soldier to people. While that of our allies was never so good. I am told by French and British officers that the operations of the American soldiers at Cantigny, Chateau-Thierry, Vaux, Fere en Tardenois, Cergy, and Fismes, where they met and crushed the selected Bavarian guards and the shock troops of Prussia, had almost completely made over the French and British Armies.

The central powers can not replenish their man power unless by propaganda in Russia. That can not be done short of two years, if it can be done at all.

Austria-Hungary is and has been in a state of revolution for months. It may break at any moment. Our greatest diplomatic stroke in the last six months, aside from the operations of our Army, is our recognition of the independence of Austrian subject peoples, of which there are over 19,000,000, as compared with the less than 10,000,000 of the ruling element, which, of course, is German. These Czecho-Slovaks, Cerbo-Croats, and Jugoslavs are of one race and older than Austria and must be given their rights, even though it dismembers the dual monarchy. These people will prevent much accretion, if any, to the front. Bulgaria is also sick and Turkey is not powerful, while the full power of this country is getting in position to give the decisive blow. Gen. March, our chief of staff, told the Military Committees that if Congress would give him 98 divisions, so as to have by June 30 of next year 80 divisions in Europe, leaving 18 here at home, the German line can be broken at any point and at any time they would choose to do it.

This is why we gave the authority in the man-power bill to go down to 18. This Army must be built without delay. Time is here of the essence. It will be the determinant. We must have our force there next year. It is said that with the Americans operating as now indicated by our program, by June next year the allies will have 100 divisions more than our enemies, where at the opening of the spring drive they had 30 to 40 more than we had.

This consideration forces upon me the confident belief that we will end the war next year.

To-day the most important item is the character of peace we will command. Herein lies our greatest danger. Suppose Germany, now convinced that her crushing defeat is but a matter of time, should surrender and throw herself upon the mercy of the world before her soil is invaded, a possible occurrence, what would be our attitude? This involves the destiny of the liberties of the world. In it lurks the greatest conceivable danger. It at once raises the question whether liberty is worth fighting for. It demands to know whether all the suffering and death of the past four years must be vain, a mere waste of human treasure. Such an ending would be the peace that the spider offers the fly. It must not be. This refined brutality displayed in the German high command in deeds of unutterable wickedness in the homes of every unfortunate country which has felt the weight of the brutal beast's heel, who have felt the strokes of the much-boasted mailed fist, must forever be eliminated. The German people, who have stood solidly behind this devilish program for more than four years of carnage not dreamed of before and who have rejected every effort on our part to separate them from this beastly combination, must now be compelled to taste the fruits of their own planting and fostering. Our armies must go to Berlin. Our aeroplanes must visit the towns of these people who for years have upheld the terrorism and frightfulness of their own command, which knows no limitation in crime, no call for the sake of humanity.

Mr. President, in the light of the importance of the assured efforts for a German peace, I wish to call to the attention of the bankers here, whom I regard the headliners, and the very men of the States, the keymen, upon whom our vigorous prosecution of the war must depend, some pertinent facts in Germany's program for world dominancy, with special reference to commerce. Peace viewed from such an angle will fully explain the various "peace offensives" since the war opened.

I have made within the past few weeks a careful study of the peace proposals, not only from the context but from the historical and psychological setting. I shall within a few days, if the House will permit, publish in documentary form this compilation. It supplies the information which gives us ground for abundant caution in this critical hour, when we may be confronted with the problem of preventing Germany securing by diplomacy and propaganda what she can not win on the battle field. I wish, therefore, to be permitted to speak to you on the significance of Germany's elaborate plans to dominate the world's trade.

It is one of the most important revelations of the war and one which will throw light upon the brutal and wickedly inhuman practices of the high command of Germany. The systematic plans of Germany to completely dominate the industry and

trade of the world are significant and alarming. They will explain in part the arrogance toward the world outside of the constituted domain of the Imperial Government. This is the inevitable result of the doctrine expressed by Dernburg when he declared the Germans the "most scholarly and wise of all men."

Germany is a system, built as per rule of the architect. The purpose was world domination. Its chief plan was through commerce, by propaganda enforced by the military power. The world was slow to be convinced; only war could compel it. Commerce was looked upon as business to be commended, propaganda as legitimate, not to be condemned, and only the great military strides suggested possible dangers. This impact Empire, which entered upon a new life back in the forties of the last century and stepped out on a platform of dangerous build in the seventies, attracted much favorable comment in its wonderful growth. A population of 36,000,000 in 1870 nearly doubled itself in 40 years. To its intensive system of agriculture it added an achievement in organized industry second to no nation. "Made in Germany" became a label which was not only met in every country, but which was looked upon as an assurance of efficiency and thoroughness in workmanship.

The country which heretofore saw a stream of emigration leaving its borders for foreign parts by a well-worked policy now saw the stream current turned toward rather than away from Germany. Immigration rather than emigration became the order. There was still a flow outward, but not by those who bade farewell to the fatherland, but rather German scholars, industrialists, and expert agents who left home as Germans to remain away as Germans, and thereby extend the influence of the fatherland beyond the borders of the national domain.

This will account for the more than 200,000 Germans in 1914 in Paris, and the great numbers of Germans in every country in both Europe and America. In Russia alone there are nearly 2,000,000 of them assiduously developing a Germany within the borders of the kingdom of the late Czar. It will be recalled that the German foreign secretary warned Girard that in the United States there were 500,000 German citizens who held primary allegiance to the fatherland, and who could and would make it impossible for America to war against Germany. It was on this occasion that our minister reminded the secretary that there were also 501,000 lamp posts in America.

This reaching out beyond the borders will also be noted in the development of German industry in all countries, including those of North and South America. It will account for the great ship lines, immense dock systems, and wonderful transportation facilities to be found in every seaport open to her commerce, which comprehends most of the world. Witness the presence of not only German citizens but German industry in cities like Antwerp, Rotterdam, and Genoa, which are but representative of European centers, and even in our own country, which had become in localities a transplanted people from the fatherland, most of whom, I really believe, have become patriotic Americans, but not on the wish of the German autocracy.

Germany has come to this stage not by accident, but by elaborated plan. Her population has grown wonderfully, which has ever been favored by German philosophy, as well as governmental policy. Internally those in charge have fostered the habits of industry among the people. Legislation looking to building up a powerful nation, independent of the outside world in such degree as is possible and seeking dominance outside in matters upon which she must look beyond her borders, were foremost in the minds of the autocracy. To this end her laws restricting expatriation and forbidding emigration, as well as those favoring immigration, were speedily enacted and rigidly enforced. The foremost need of this growing country was a system of industry which would find employment of the various elements of the Empire. The upbuilding of great industries to utilize the resources was necessary. Expansion, not so much in territory but in operations of industry, was requisite.

German industry is unlike anything of its kind elsewhere. It is not individual, as in our own country, but it is largely governmental as well as social, with a pronounced emphasis on concentration. Individuality is not a trait of this people. Not even teamwork is prominent, since in teamwork the individual is something more than a mere cog, as he must act his part as an individual as well as a part of the team. But concentration in Germany leads to disintegration the moment the individual is left alone, a fact exemplified every hour in the German lines at the front.

The first striking fact in Germany's great industrial strides toward commercial dominance is her utilization of the expert—the research man. There is no country which has placed such emphasis on the value of the university and its products. No country in the world has approached Germany in the number of research institutions, as well as the number of research men.

This country has placed the stamp of dignity upon her scholars. To wear the title of doctor or even professor in Germany at once designates rank. In Germany, unlike our own country, the university is an institution of the Government. The professors or doctors are therefore in a way governmental officials. Their duties are assigned with reference to the Government. Teaching or directing research in the university is not always their entire duty. They are loaned for part time duty to various great industries for counsel and research. In one famous dye industry there are employed nearly 150 chemists, of whom at least 70 are employed in research exclusively, at an annual expense of at least \$70,000, while the others have the direction of the business as a growing concern. Most frequently in the office of director in any German industry can be found a university professor, with no further connection than councillor or expert advisor, loaned to the industry by the Government. This working connection between the industry and the laboratory is established in almost every great industry where expert advice and research are of value. The result of such a policy is not only vast increase of product due to invention or discovery or both, but also in a lowering of cost of the article. In the case of the 70 research men one man might make a discovery, like our own Dr. Rittman, which would result in an increase of product that would more than pay for the entire expert force of the business for the balance of the lives of all the rest of them. The chief item here is the connection of the industry with the Government in production, which in Germany is the autocracy directing all industry.

This will produce, if not forestalled, a problem of a possible overproduction, which in turn would be shown in vast unemployment and necessarily great suffering among labor. Hence the effort by the Government to regulate production on the one hand and increase consumption on the other. The cartel system so well and long established in Germany is the chief item in the method. Unlike our own country, which by law makes it a crime to combine to regulate production and control of prices, Germany by governmental decree creates the cartel for that very purpose. Through this system certain businesses will be substantially confined to specific members of the cartel—for example, coal or metallurgical products, dyes, and so forth. The several producers of coal will enter into a combination and, under governmental regulation, contract to supply the market. They can thus be regulated as to amount of production, price of article, place of sale, and so forth. Where such control is exercised it will be allowed to one unit to sell exclusively in a specific territory at a specific price in such quantities as are permitted by the selling agency which is coordinate with the cartel, with the power to apply penalty wherever the rules are violated. In this way, since the business is looked upon as of the fatherland, it will be permitted to sell in one country at one price, in another at a different price, and at home at still a different price. It is and has been the policy of the cartel system permitted by the German Government to sell in a foreign country way below the price at home in order not only to develop a foreign market for the surplus product but to drive out of existence in the foreign country the competing industry. This has been done in many various lines, especially in lines of chemistry, dyes, and so forth.

This is what Germany terms the system of dumping. In every country doing business with this Empire the deleterious effects of dumping are experienced under suffering of business depression. It extended to agriculture as well as manufacturing. This underselling is made possible by several agencies at work in the export trade of Germany.

One of the chief agencies is the banking system of the Empire. Here again we see the hand of the Government and great concentration of power. Nine banks in the Empire do the major portion of the banking business. It may be truly said that five banks of the Empire hold a good proportion of the country's banking resources.

Each of these banks is but the aggregation of a great number of smaller banks scattered widely, not over the Empire alone but the entire world. Each grew by the process of absorption, some of them to the number of nearly half a hundred becoming mere branches of the parent bank. One of the most significant features of German banking is, in addition to the real functions of banking as we in America know the business, the German system took on the function of financing various businesses of which the bank was not only the financial agent but became part if not whole owner and profit sharer.

It is notorious that certain banks in Germany became chief backers of specific classes of industries; for example, the Deutsche Bank, with a capital of over \$50,000,000 back in 1911, had as its specialty the development of electricity and its varied applications. The Darmstadler specialized in narrow-gauge

railways and breweries, the Disconto in foreign railroads, while others combined their interests. Another feature of these banks was the enormous issues of capital in short periods for development purposes, a practice not countenanced by our country. As the cartel system was permitted in industry production, so a system of grouping of banks for financial purposes was not only allowed but favored by the Government. In this way the mother institution was located in the home country and branches were established throughout the world, and, in addition, branches of these branches were permitted, so they might be mentioned as mother banks, daughter banks, and granddaughter banks. In Buenos Aires, for example, is a branch or daughter bank, of which there are no less than 11 sub-branches throughout the countries of South America. Each of these will have direct connection with the home country and operate as a powerful agency for spreading German influence. Need more be said to explain the attitude of some neutrals? In Italy the great German bank—Banca Commerciale Italiana—is a powerful agency to which is due much of the pro-German sentiment in that country. It is an undisputed fact that German business and enterprise is not only powerful in Italy but it has so ramified the banks, and through them the business activities, and in turn the press and all agencies of public interest, so that public opinion was strong enough to send to the Italian Parliament men whose sympathies and influence were all-powerful for pro-Germanism. This will help to explain the internal problem of Italy battling for the freedom of action when Germany demanded Italy, as a member of the triple alliance, to assist the Hohenzollern Empire. When Italy's real situation is better understood, the suffering she had to undergo because of the heroic stand she took, and how through it all she battled, even in the face of the awful debacle of October, 1917, that country will receive greater recognition for her wonderfully heroic behavior under such awful internal conditions. This is only one case of Germany's operations beyond her borders where by the route of business and commerce she dominates. That influence is found in every country, in more or less degree, fairly well known before the war, but never fully understood in purpose or possibility.

The German banking system would not be regarded by any English or French speaking country as sound, and consequently these countries are not willing to enter into competition on that plane, and must therefore necessarily suffer loss of trade when in the business of rival development, whether at home or abroad.

This consideration viewed in connection with her dumping system will explain how Germany first kills the preparatory industries in any country which attempts to compete with her. As was recently said by a prominent French economist, "German industry thus shatters all the forces which can compete with it in such a way as to reign over the ruins."

Still another great arm of this commercial monster is her transportation system, especially her ship lines, both inland and overseas, and all necessary appurtenances, such as docks, wharves, cranes, and all that enter into the value of ports. It is well known that Germany operates her rail system most largely by government agency. It is not so well known that her water systems, rivers and canals, has been brought to its maximum possibilities. I will not enter upon that phase of the problem except to say no other country in the world has made such use of her waterways system. All her rivers are made highways and the cities upon the rivers are veritable hives of industry. Her canal system is only a part of a completed plan of transportation. Her mercantile business lines the shores of the river and canal, whether it be in Hamburg or Antwerp, Rotterdam or Genoa. The three latter are as distinctively German as if located in Germany. In these cities, as was hinted before, will be found not only German people and German enterprise but German dominance made possible by the various and numerous German schools, German clubs, German newspapers, and various German societies.

In her transportation system there is a close relationship between rail and ship transportation. It is so arranged by the system of forwarding that discrimination of rates can be so allowed that countries like Italy can be made commercially dependent upon Germany. Germany has devoted great effort to building her overseas trade. In 1901 Germany saw 52,000 vessels, aggregating 9,000,000 tons, leave her ports, while eight years later she saw 65,000 vessels, aggregating 13,000,000 tons, in motion, which indicates that at least 70 per cent of her trade was carried on the water. Germany is the first country to build the great ocean liner and the mammoth docks, notwithstanding she is a land nation. She boasted of her mighty transportation companies such as the Hamburg-American, the Lloyds, and the Kosmos; the Hamburg-American has not less than 68

lines, which bring the fatherland in touch with all America as well as the Orient.

Unlike Great Britain, universally looked upon as the world's greatest merchant-marine power, Germany does not employ the tramp steamer, but she maintains regular sailings at competitive rates, with safe insurance, on the basis that shipping does not follow the trade but makes trade possible. Her rates are so charged that she virtually discriminates in favor of her own bottoms. In case goods transported in foreign bottoms, inspection charges must be paid by the shipper; if in German bottoms by the company. On the one hand, emigrants can proceed across Germany only when armed with certificates of disinfection, but unless they travel on German lines such certificates are refused by officials. Those with foreign tickets will be stopped and most likely sent home unless they purchase tickets on German lines. To this practice add the governmental favor in the form of subsidies and the maritime growth of this people is easily explained.

There is no phase of this attempted monopolization of the world's trade with special reference to German interest more significant than the systematic development of the foreign markets. From the very beginning this country sought to control the economic welfare of its people by creating a foreign market for its surplus product, which has come to be the major business of its function. To this end German colonies were permitted primarily to increase the raw material. In every country will be found the "little Germania," whose primary fealty, as said the foreign secretary, is to the fatherland. These operate as ganglionic centers for German interests.

Then, this Nation has always paid more attention to its foreign consulates than any other country, not even excepting the British. In Petrograd, for example, the German consulate was more numerous, better housed, better supported, and better directed than any other. France allowed \$30,000 for this post, and employed 3 employees, while Germany employed not less than 17.

Unlike our own country, Germany conducts courses of training for such labors and supplies the other countries with which she competes with experts. It is a part of the world-wide propaganda to extend German influence through the arteries of trade as a part of the program of world domination. These men are at the gates of the world's channels of trade, whether those of Switzerland, Holland, Sweden, South America, and in many cases the great countries engaged in foreign commerce. These German agents operate under orders to secure the trade for the houses of the fatherland. It was common to find Germans as clerks in the consular service of all countries, including our own, prior to the war. When the war opened our own Nation was seriously embarrassed to find that many of our foreign consulates were employing agents of enemy countries. It is not too much to assert, indeed we now know it to be a fact, that these agents in whosoever employ did not overlook the chance to favor the trade of the fatherland while they presented the goods of the country for which they were paid to sell. Had it been in war time these agents would properly be termed "spies."

Another item in this program of market development is found in the interest Germany displayed in studying the consular reports of her competitors. While these reports signified but little to the countries for whom they were made, to the German trained searcher after trade they were meat and drink. They also served as guideposts in establishing new lines of commerce and recipes for developing new sources of German power. Germany easily excelled also in the great achievement in map making and chart production to show in graphic form the facts of trade. Her system of card indexing had been reduced to an almost exact science. Even in New York City a very commodious building was before the war devoted under German direction to the task of presenting a complete index of the world's production. It is said that in a few moments' time one seeking information could secure the financial standing of any firm in any portion of the civilized world. This index system will give the firm's standing, the character of business, amount of business done, amount and classification of exports or imports, or both; in fact, a complete statement, no matter in what corner of the globe the firm may be located.

These consular agents are instructed to go out of their way to study the tastes of the people with whom they deal in order to satisfy the same, the purpose being not to sell a particular style but to get business. As an aid to this program, Germany has conducted a systematic propaganda more far reaching and wide spreading than any of us have conceived. Her banks encourage exports and stand ready to finance industries for that purpose; her branch banks aid in sales in foreign lands; her cartels increase production; her selling agencies regulate prices; her policy of dumping crowds out and stifles competition; her ships

invade every free port; her spies are in every land; her advertising agencies control the columns of the press; her money finances enterprises everywhere; her agents assiduously extend her interest even when employed by her competitors; and her propaganda is spread by aid of her "little Germanies" through hundreds of clubs and societies similar to the various alliances, and numerous newspapers of German origin and ownership, of which there were prior to the war at least 168 outside of Europe.

It might be asked how can all this be done by any country. The answer is easy and not difficult to understand. Germany is distinctly an autocracy, with power emanating from above. The entire population can be and is treated as so many puppets to be commanded, with no choice except to obey the high command. A small proportion of the population belongs to the royal family, responsible to none but themselves. Somewhat larger proportion makes up the Junkers, that element which knows no rights outside of their rank, while quite a considerable proportion has won the rank of special favor signalized by being permitted to write Von before their names. These three classes compose the privileged and ruling people, while the vast mass of the Empire is under the tutelage of their autocratic masters, who see that they shall be kept where they are, a condition upon which autocracy depends, without which it could not exist. To assuage their unrest the masses are given the salve of a program of autocratic concession of "old-age pensions," "occupational insurance," and similar legislation, built upon the principle of permanent stratification of society. Once a drawer of water and hewer of stone always to be kept so is German philosophy.

Germany is to-day and has been under an autocracy whose ambition is to rule the world, employing her own subjects to achieve the end. This ambition displays itself in the most arrogant attitude of superiority from whatever angle viewed. One step toward world supremacy which prior to the war had not been suspected, but which had been more or less applauded by the outside world as commendable achievement, is this now alarming program of commercial domination. A second step is her type of secret diplomacy, assisted by a surreptitious propaganda that has percolated through her various agencies into every nation. The ambition as displayed in doubtful diplomacy can be read in the consuming passion for power and in the dreams of Mittel Europa, expressed in the German slogan "from Hamburg to Bagdad." The third and final step in this program of world dominancy can be detected in the 40 years of militarism which has completely encompassed her entire population, and in devotion to which her man power was mobilized, her people were sacrificed, and at least three and one-half million German soldiers have gone to their death.

In addition, the nation has paid the maximum price in the sacrifice of every modicum of respect and has unwittingly invited the bitterest hatred of the entire world, which can not be relieved by any possibility now in sight in the generations to come. No child now living will ever see the day that Germany and things German will not be despised. When Germany's ambition is studied from all of these angles it will be easy to explain not only the causes but the movements of this war. Her armies covered in the early months of the war nine-tenths of the mineral wealth of France, and then dug in. Like the vast mineral wealth of Alsace-Lorraine, this coal and these mines in the fifth of France overrun—all was needed in her plan. She covered Belgium, even to Antwerp and Zeebrugge. These were needed in her plans—the first for shipping purposes, the second for submarine base. The Black Sea, now a German lake, was needed for its commercial possibilities, as was the famous waterway, the Dardanelles. The wheat fields and oil fields of Roumania, the richest in Europe, were needed, as were the resources of the Ukraine and Poland; hence the shameful treaty of Brest-Litovsk, through which the Bolsheviks traitorously played the game. So soon as she extended her borders to comprehend what was needed for her ambition she urged peace, and has persistently conducted peace offensives at regular periods ever since. Peace to-day would leave her in complete control of the liberties of the world. In considering any proposal for peace these things must be kept strictly in mind. It must not be overlooked that Germany still maintains her commercial possibilities. Even now, when her commerce is swept from the seas, we are told she plans for commercial dominancy. Her merchant marine, it is true, is in the hands of the allies, but in her shipyards she is now building larger ships than were afloat before the war. See her activity here in our own land, to say nothing of her secret and seductive propaganda through her agents, her clubs, her alliances, her associations, her exchange professorships, her news agencies, and her language in our schools. In our own country Mr. Mitchell Palmer, our Alien Property Custodian, informs me that German aliens have prob-

ably \$2,000,000,000 of property. He tells me he already administers upon nearly \$500,000,000 and has in sight probably \$300,000,000 more. He also states that German aliens had before the war what might be termed monopolistic control of at least two score of different industries here in America.

No peace can be thought of while this power remains. These rules of business must be exposed and met. This propaganda must be dissipated, the army must be completely defeated, no peace by negotiations—only by dictation. When our armies are in Berlin, or at least on the highway leading thereto, then we will talk peace. Any other course will be fatal. Until then we can not insure the liberties of the world. Germany must remove her heel from the rights of mankind. She must restore the overrun countries to their rightful owners, including the Provinces of Russia. She must guarantee rigid respect for the treaty dictated by the allies. She must give assurance of the validity of international law. She must convince those nations battling for national rights of all nations, large and small, that no assaults against their sovereignty on the ground of superiority will ever again be made. She must be reduced to a position where she can not further terrorize the world by a military establishment built upon the doctrine "Might makes right." In a word, no peace can be conclusive until the system of autocracy, which refuses to consult right, but relies on might, is totally repudiated by the people now under such autocracy.

I repeat that these guaranties can not be made until our armies are in complete control of the enemy with headquarters on German soil.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 26, 1918,

On the bill (H. R. 12095) to protect the lives and health and morals of women and minor workers in the District of Columbia, and to establish a minimum-wage board and define its powers and duties, and to provide for the fixing of minimum wages for such workers, and for other purposes.

Mr. LONERGAN. Mr. Speaker, the bill under consideration should be enacted into law without delay, and for many reasons.

In itself the bill corrects a condition which might otherwise be the forerunner of serious economic and moral harm, and points the way to a clear solution of one of the most vexing problems of our national life.

But aside from its provisions and its inherent worth, in themselves compelling attention, the fact that the Merchants and Manufacturers' Association of the District of Columbia appeared not in opposition but in favor of the bill at the hearing before the Committee on the District of Columbia, at once attracts attention to the measure. Probably nothing like this ever happened before in this body, when an organization representing employers was enthusiastic over a measure purporting to raise wages. It marks a distinct departure in American legislative history, and the action of the association will undoubtedly be seconded by the merchants' and manufacturers' associations throughout the country.

Here we have united on a program—the employers, the employed, the large labor-union organizations of the country, and those who devote their lives to economic questions as a vocation.

The bill establishes a wage board, which in turn will appoint boards for each occupation, on which will be represented employers, employed, and the public. The best features brought out by experience in such States as Massachusetts, California, Oregon, Washington, and Wisconsin will be made use of under the law; and the future of the women and minor workers of the District of Columbia will no longer be dependent upon chance but will be safeguarded by the law of the land.

The war has brought home to every nation in it the importance of conserving its man power. Man power means national strength. But national strength will disappear if the health and moral welfare of the women of our land is not safeguarded, and one of the surest ways to safeguard them is to provide for wages for women that will guarantee good living conditions.

The bill is patterned after the Oregon law, and the Oregon law has stood the test of the supreme court of that State and of the Supreme Court of the United States.

The enactment of this measure into law at the earliest moment will provide a legacy for future generations that will become more valuable with each year.

Patriotic Speech on the War.

EXTENSION OF REMARKS

OF

HON. ROSCOE C. McCULLOCH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 10, 1918.

Mr. McCULLOCH. Mr. Speaker, under the leave granted me by unanimous consent to extend my remarks in the RECORD I include an address I delivered recently at various places in my district on the war:

SPEECH OF CONGRESSMAN ROSCOE C. McCULLOCH.

When I first entered upon my duties in the Congress of the United States, the clouds of war had just broken on the Eastern Hemisphere. Few then believed that this country would become involved in that terrible conflict.

It is not strange that the American people should have felt a reluctance about entering the war. It is not strange that the United States should have tried by diplomacy to keep out of the war, and that everyone should have hoped and prayed for peace, for the American people are a peace-loving people.

True, we have won great victories in the wars in which we have engaged, all of which were wars waged in the interests of humanity and human liberty, yet our greatest triumphs have been the triumphs of peace. The truth of the words of one of our greatest Presidents, uttered a few hours before his assassination, can not be questioned. He said:

Let us ever remember that our interests are in concord, not conflict, and that our chief eminence rests in the victories of peace, not those of war.

We as a Nation have always been opposed to militarism. The fathers of our country broke away in the beginning from the system of military service established in the Dark Ages. Every expression in our Constitution and in the constitutions of the various States of the Union which relates to the military defines it as a means of defense and an establishment to be maintained for the purpose of protecting our personal liberty and our property rights.

We have never entered upon a war of conquest, and at every great diplomatic conference in which the delegates of this country have participated, we have always stood firmly for the settlement of disputes among nations by arbitration and not by force. So that it should be a source of mingled feelings of pride and satisfaction to every true American to feel and to know that his country entered this terrible world war with clean hands and that, whatever other nations may have to answer and apologize for, the great American Republic's record is as clean and as white as the driven snow.

CAUSES OF THE WAR.

So much has been said upon the subject of the causes of this war and the reasons for our entering it that it would be hard in a few words to review or even summarize satisfactorily all the views of those who have attempted to state the causes that have led us into the conflict.

As I view it, our real reasons for entering the war can be divided into two classes—first, the proximate cause, and, second, the remote cause. The President of the United States gave the following as the reason why we are at war. He said:

The military masters of Germany denied us the right to be neutral. They filled our communities with vicious spies and conspirators. They sought to corrupt our citizens. They sought, by violence, to destroy our industries and arrest our commerce. They tried to incite Mexico to take arms against us and draw Japan into hostile alliance with her. They impudently denied us the use of the high seas and repeatedly executed their threat that they would send to their death any of our people who ventured to approach the coasts of Europe.

In other words, the President has summarized the overt acts of the German Government against the Government and the people of the United States as the proximate cause, or, I might say, the immediate cause of our entering the war.

REMOTE CAUSE.

The remote cause for our entering the war—and since the declaration of war the remote cause has been the principal subject of discussion—is that our liberty, our freedom, and our democracy are endangered by the existence of the German military machine and the attitude of the rulers of Germany toward the rest of the world.

Civilization was shocked when Germany violated solemn treaty obligations and overran and devastated Belgium. For a nation to disregard its treaty obligations and ruthlessly destroy human life and property as the German military power did in

Belgium led the people of the world to examine into the philosophy of the German rulers and their probable attitude toward other nations. And it became apparent that the German military machine in the hands of the present German rulers is a dangerous menace.

WRIT OF THE FIGHT.

I am sure I express the sentiment of the vast majority of the American people when I say that I trust this war will forever end war.

It is as absurd for a nation to attempt to settle its disputes, be they great or small, by resorting to force of arms, which means death and destruction, as it is for an individual to attempt to settle his personal differences with another by a fight. Anyone who would suggest that we return to the practice discarded hundreds of years ago, called the "writ of the fight," for the settlement of personal disputes would be regarded as a barbarian.

In the old days, if two farmers had a dispute about a line fence and one of them would go before a justice of the peace, he could have issued what was termed the "writ of the fight," and the defendant would be summoned into court. They would choose their weapons and fight, and the one that licked the other was declared to be right in the controversy. They were applying the same rule that those who believe in German autocracy are attempting to apply to-day, which is that "might makes right," and which is as fallacious a doctrine as it is uncivilized; and just as sure as the world lasts and the heavens endure, war, which is the creed of the German military power, will be wiped out or civilization will be destroyed.

If this war does not wipe out German militarism and absolutely destroy the German military machine, the purposes of America in this war will have failed. This war must remove from the path of civilization the autocratic German military power, and if, in order to secure a guaranty from Germany of reparation and the future good behavior of the German Empire, its power must be destroyed, then there will be no success in this war until that is done. This war must remove the military menace. This war must destroy the German military machine. This war must eliminate the German military caste and forever insure peace, or the lives that have been given on the altar of liberty, justice, and civilization will go for nothing. It must be peace with victory; permanent and lasting peace; peace builded upon the firm foundation of international justice; peace which means security and which will enable the American people and their posterity to continue to enjoy in the years that are to come, as they have enjoyed in the years that are gone, the blessings that come from the exercise of certain unalienable rights, among which are life, liberty, and the pursuit of happiness.

LOYALTY.

There has been a great deal of discussion generally about patriotism and loyalty. I believe that the American people as a whole are loyal. The number of those who are disloyal is so small that their influence amounts to a negligible quantity. All should be regarded as being loyal until it clearly appears that they are disloyal.

There is not a thinking man or a thinking woman who loves to call the American flag his or her flag who would not rather sacrifice his all than see Germany win this war.

I can not help looking upon our country as a great corporation—the greatest in the world—the United States of America (Ltd.). We are all equal stockholders in this great enterprise. Everything we have in the world, or can ever expect to have in the world, is invested in it. It brings us freedom, prosperity, and happiness, but, above all, it brings us opportunity. It says to the son of the penniless widow as well as to the son of the multimillionaire, "Young man, all the avenues of honor, distinction, and success are open to you." It gives us our chance for success in the world. Ours is the greatest country beneath God's footstool, and it has the best form of government in the world—a democracy in a republic. If it should fail or go into bankruptcy or into the hands of a German receiver, all we hold dear would be lost and gone forever. Can it be that anyone wants that? There can be no divided allegiance. You are either for your country or you are against your country. If you are against your country, you are a traitor. There can be no degrees of loyalty. No man can be 90 per cent American and 10 per cent German. He must be 100 per cent pure American. The patriot, who is fast becoming more despised than the profiteer, is constantly trying to apply the acid test to loyalty. He wants people to think that he is a greater patriot than his neighbor. I have always been suspicious of the man who is continually talking about his own honesty and impugning, on suspicion, the honesty of others. Such men will bear watching.

The same is true of the patrioter. I agree with Senator HIRAM JOHNSON, of California, who said:

I do not know which I despise the more, the profiteer, who is coining the blood of the Nation, or the patrioter, who wraps his scared soul in the flag and tries to camouflage his misdeeds by dubbing his neighbor disloyal. The one is as insincere and unpatriotic as the other.

Do not be a patrioter, but be a real patriot and accord to your neighbor credit for the same good intention and loyalty that you claim for yourself, and you will be rendering your country a service.

PAST AND FUTURE.

Our eyes should be turned toward the future. The past is gone. The problems of each succeeding day and the decisions to be made are only important now as they bear upon the future. There have been perhaps many mistakes made. There have been mistakes made by the executive branch of the Government. There have been mistakes made by the legislative branch of the Government. There have been sharp differences of opinion as to what our policy should have been in the beginning and from day to day as the work progressed. These differences of opinion were among men whose one and only thought was to do that which would be for the best interests of our common country, men whose patriotism can not be questioned, men who would be willing to make any sacrifice in order that we might win the war. There were those who believed that we should have entered the war when the neutrality of Belgium was outraged. There were those who believed that we should have gone to war when the *Lusitania* was sunk, and then, again, there were those who believed that we should not have gone to war at all. It is but natural that there should have been those conflicting views and differences of opinion. And it is no evidence of a lack of loyalty on the part of any true American citizen to have had and to have expressed an honest opinion as to the policies to be pursued by his Government in a crisis such as confronted our country.

It was a situation that called not only for patriotic devotion to the country but for the wisest counsel and the best thought of which the Nation was capable in the perfecting of the policies we decided upon in the entering and in the carrying on of the war.

I have no sympathy with the idea that men charged with responsibility, or those who exercise the right of citizenship, should not express their honest opinions as to what our various policies should be while our policies are in the making. But I also believe that when a policy has been decided upon, that then everybody should stand back of that policy to the end. After "the die is cast" criticism of the policy decided upon does no good and may do great harm. The true American will accept the decision of the majority and buckle on the armor of loyalty and go forth to do his part, be it great or small, for his country.

GERMAN AUTOCRACY V. AMERICAN DEMOCRACY.

The philosophy of German autocracy is diametrically opposed to the philosophy of American democracy.

German autocracy teaches that "might makes right." American democracy teaches that "justice and equity alone make right."

German autocracy teaches that war is a biological necessity of the first importance, a regulative element in the life of mankind which can not be dispensed with. American democracy teaches that war is a relic of the Dark Ages and that disputes among nations, as well as among men, should be settled by arbitration and not by force.

German autocracy teaches that power and conquest constitute the highest moral law. It is the proud boast of our American democracy that we never entered upon a war of conquest.

German autocracy teaches that terrorism is a necessary military principle. American democracy classes such terrorism as has been indulged in by the German military machine during the present war as uncivilized and a return to the practices of the Dark Ages.

German autocracy stands for war, for conquest, and for the rule of the despot. American democracy stands for peace, for freedom, for justice, for humanity, for civilization, and, above all, it stands for human liberty.

Is our liberty worth fighting for? Is it worth dying for?

Our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal.

The blood of this Nation has again and again been poured out on the field of battle to preserve inviolate the principles our forefathers laid down, so aptly summarized by Lincoln. Are we of the aftermath going to see it perish? Not until the last drop of blood has been shed! Whatever your view may have been in the beginning, but one course remains now. It must be

a fight to the end, and the forces of liberty and of justice will not fail. It is not possible in the light of our twentieth century civilization that brute force and militarism should triumph.

The patriotism of the American people, stimulated and sustained by the example of our illustrious past, will bring victory to our arms. I have the greatest faith in the patriotism of the American people.

If I were to be asked the question, "Wherein lies the strength of the Nation?" I would answer in but a single word, "Patriotism." Patriotism is the most important element of national character. Patriotism will raise armies of millions of men, if need be, to battle for right and for justice. Patriotism will open the mines and the mills of this the greatest industrial miracle land in the world that our fighting men may have munitions and guns and cannons and supplies. Patriotism will bring to the aid of America the greatest inventive genius in the world to devise ways and means of defense and offense. Patriotism will open the coffers of the rich and the poor will give gladly that the millions of money needed may be raised to prosecute the war to a successful conclusion. Patriotism, American patriotism, purified by the sunlight of Christian civilization, made sacred by the blood of patriots who have died gallantly on the field of battle, stimulated by a new awakening, American patriotism will mobilize the forces necessary for a world victory—

That government of the people, by the people, for the people, shall not perish from the earth.

WAR RECORD.

The present Congress has been one of the most important, if not the most important, in the history of our country. Its Members have been called upon to decide questions and pass legislation of the gravest importance. My attitude as your Representative on all bills that came before Congress has been influenced solely by my conscience and by what according to my best judgment I believed was for the best interests and welfare of the United States and her people.

My record in Congress is an open book, to which I invite the closest scrutiny of all of my constituents. I have stood for America first always. I have tried to be conservative, having always in mind a full realization of the solemn duty and grave responsibility that rests upon me. I hope my actions have met the approval of my constituents. If there are any who have differed from me, I trust they will at least give me credit for conscientious action.

I have voted for every bill pertaining to the war passed by Congress, without a single exception, since the declaration of war, and before the declaration of war I voted for every bill for preparedness passed by Congress without a single exception. There were some bills pertaining to war and preparedness voted upon when I was absent, but, as the record will show, they were practically all of minor importance, as I made it a rule to be present at all times, if possible, and especially during the consideration of every bill of any importance.

It has been my policy from the beginning to confine whatever suggestions I had to make in regard to proposed or pending war legislation to the consideration of the bill in the Committee of the Whole House. This consideration includes amendments of all sorts which may be offered and which must be acted upon in Committee of the Whole before the bill is reported to the House for final action. Many of these amendments are offered without notice and very often without much, if any, thought or consideration, and a very large proportion of them are always absolutely without merit. It therefore has been my policy in dealing with amendments to bills offered in Committee of the Whole to follow the committee that had the bill in charge and made the investigation, unless I became convinced from the arguments presented and my own investigation that the committee was wrong. But when the bill was reported to the House from the Committee of the Whole, if it was a bill that pertained to war or preparedness, whether it completely met my views or not, I voted for it.

The following summary shows that I have not voted against a single war or preparedness bill passed by Congress since I became a Member:

How Congressman McCulloch voted on the war and preparedness bills of the Sixty-fifth Congress.

Declaration of a state of war with Germany.....	Voted "aye."
Deficiency appropriation bill, including \$100,000,000 for national security and defense.....	Voted "aye."
Bill authorizing first liberty-loan bond issue of \$5,000,000,000—loan of \$3,000,000,000 to allies.....	Voted "aye."
Bill extending minority enlistments in Navy and Marine Corps.....	Voted "aye."
Bill authorizing detail of additional naval officers to Hydrographic Office.....	Voted "aye."
Bill authorizing temporary increase in number of midshipmen at Naval Academy.....	Voted "aye."
Bill authorizing increase in age limit for officers in Naval Reserve.....	Voted "aye."

Bill authorizing enlistments by the allies in the United States	Voted "aye."
Army appropriation bill	Voted "aye."
Bill authorizing the taking over of enemy vessels	Voted "aye."
Selective-service act—conscription bill	Voted "aye."
Bill authorizing enrollments in Naval Reserve Force	Voted "aye."
Bill authorizing increase in Navy and Marine Corps	Voted "aye."
Bill authorizing appropriation for temporary Red Cross buildings	Voted "aye."
Military Academy appropriation bill	Voted "aye."
Resolution authorizing temporary War Department buildings on Smithsonian grounds	Voted "aye."
Bill changing provisions of war-risk insurance act—insurance of officers and crews of vessels	Voted "aye."
Urgent deficiency appropriation bill for war expenses	Voted "aye."
Espionage act	Absent.
Bill providing for taking over of street railways near shipyards, etc.	Absent.
Bill authorizing condemnation of land for military purposes	Voted "aye."
Resolution defining status of Public Health Service officers during war	Voted "aye."
Resolution providing for relief of mining claimants in military or naval service	Voted "aye."
Bill providing for increase in Signal Corps—appropriation of \$640,000,000 for aviation, etc.	Voted "aye."
Bill establishing aviation stations at San Diego	Voted "aye."
Bill providing for relief of homestead entrymen in military or naval service	Voted "aye."
Bill providing for relief of desert-land entrymen in military or naval service	Voted "aye."
Bill establishing priority of transportation, etc.	Voted "aye."
Food-survey bill—appropriation of \$8,000,000	Voted "aye."
Food-control bill—appropriations of \$162,500,000	Voted "aye."
Bill authorizing second liberty-loan bond issue of \$7,538,945,460—loan of \$4,000,000,000 to allies	Voted "aye."
Bill establishing Air Craft Board	Voted "aye."
War-revenue bill	Voted "aye."
Bill for repatriation of persons in military or naval service of allies	Absent.
Bill authorizing establishing naval air stations at Camp May	Voted "aye."
Urgent deficiency appropriation bill for war expenses	Voted "aye."
Bill for allotment of Army pay	Voted "aye."
Bill providing for restrictions on manufacturers, etc., of explosives	Voted "aye."
Bill regarding property lost in naval service	Voted "aye."
Bill permitting public-land affidavits of soldiers before commanding officers	Voted "aye."
Bill providing for gratuities to dependents of deceased retired officers and soldiers	Voted "aye."
Bill for appointments in Officers' Reserve Corps, etc.	Voted "aye."
Bill providing for service of officers of naval auxiliary forces on courts-martial	Voted "aye."
Bill providing for secrecy of inventions during war	Voted "aye."
Bill providing for Army chaplains at large	Voted "aye."
Bill providing for promotions, etc., in Army Medical Department	Voted "aye."
Bill providing for commutation of Navy rations at 40 cents	Voted "aye."
Bill for new ratings in artificer branch of Navy	Voted "aye."
Bill providing for provisional organization of Cavalry regiments as Field Artillery or Infantry	Voted "aye."
Bill changing provisions of war-risk insurance act allotments, insurance of soldiers, etc.	Voted "aye."
Bill on trading with the enemy	Voted "aye."
Declaration of state of war with Austria-Hungary	Voted "aye."
Bill providing for increase in number of midshipmen at Naval Academy	Voted "aye."
Bill providing for calling into service of Philippine Militia	Voted "aye."
Bill appropriating for housing of shipyard employees, etc., \$50,000,000	Voted "aye."
Bill providing for soldiers' and sailors' civil relief	Voted "aye."
Bill providing furloughs to Army enlisted men	Absent.
Bill prohibiting sale of liquors, etc., at places under naval jurisdiction	Absent.
Bill providing for operation of transportation systems under Federal control	Voted "aye."
Urgent deficiency appropriation bill of \$700,000,000	Voted "aye."
Bill providing for disposal of effects of persons dying in the naval service	Voted "aye."
Bill providing for additional pay of firemen in Navy	Voted "aye."
Bill providing for pay of gun pointers and gun captains temporarily absent	Voted "aye."
Bill providing for reenlistment of men in Army after receiving commissions	Voted "aye."
Bill providing for discharge of Navy and Marine Corps officers for certain offenses	Voted "aye."
Bill providing for temporary reduction of course at Naval Academy	Voted "aye."
Bill providing for leave of absence of homesteaders who entered the Army	Voted "aye."
Bill authorizing third liberty loan bond issue, including certain prior issues, of \$12,000,000,000, loan of \$1,500,000,000 additional to allies	Voted "aye."
Bill providing for War Finance Corporation and Capital Issues Committee	Voted "aye."
Bill providing for additional Assistant Secretaries of War	Absent.
Bill providing for restraint on female alien enemies	Voted "aye."
Bill providing for pay of retired warrant officers on active duty	Voted "aye."
Bill providing penalty for destruction of war materials, etc.	Voted "aye."
Bill providing for condemnation of land for military purposes	Absent.
Bill providing for quarters for Army officers having dependent relatives	Absent.
Bill providing Reserve Officers' Training Corps	Absent.
Bill providing for claims for damages caused by American forces in Europe	Absent.
Bill providing for reimbursement of enlisted men for traveling expenses	Absent.
Bill providing for filling of vacancies in grades of Regular Army	Absent.
Bill for sale of war materials, etc.	Absent.
Appropriation bill of \$1,000,000 for ordnance-testing facilities	Voted "aye."
Bill providing age limit for admission to Naval Academy	Voted "aye."
Bill changing provisions of espionage act	Voted "aye."
Appropriation bill of \$60,000,000 for housing for war needs	Voted "aye."
Bill providing for calling of certain classes into immediate military service	Voted "aye."
Bill changing provisions of war-risk insurance act	Voted "aye."
Overman bill—coordination of bureaus, etc.	Voted "aye."
Bill providing for draft of persons becoming 21 since June 5, 1917	Voted "aye."
Bill authorizing national banks to subscribe to the Red Cross	Voted "aye."
Bill providing for restrictions on entry and departure from the United States	Voted "aye."
Bill providing for Army chaplains	Voted "aye."
Saulsbury antiprofitteering resolution	Voted "aye."
Urgent deficiency appropriation bill	Voted "aye."
Bill changing provisions of war-risk insurance act	Voted "aye."
Bill providing for vocational rehabilitation of disabled soldiers, etc.	Voted "aye."
Military Academy appropriation bill	Voted "aye."
Bill providing for readmission of certain aliens serving in military forces	Voted "aye."
Sundry civil appropriation bill, including \$50,000,000 for national security and defense	Voted "aye."
Naval appropriation bill	Voted "aye."
Appropriation bill for fortifications	Voted "aye."
Bill providing for protection of uniforms of friendly nations	Voted "aye."
Deficiency appropriation bill	Voted "aye."
Bill authorizing fourth liberty-loan bond issue of \$8,000,000,000—loan of \$1,500,000,000 to allies	Voted "aye."
Army appropriation bill	Voted "aye."
Bill changing provisions of war-risk insurance act	Voted "aye."
Resolution providing for control of telegraph, telephone, etc., by the President	Absent.
Bill providing for assignment to duty of fleet of naval reserve	Voted "aye."
Water power bill	Voted "aye."
New man power bill	Voted "aye."

How Congressman McCulloch voted on the preparedness bills of the Sixty-fourth Congress.

Bill providing for increase in number of midshipmen at Naval Academy	Voted "aye."
Bill providing for increase in number of cadets at Military Academy	Voted "aye."
Bill providing for issuing supplies to military schools and colleges	Voted "aye."
National defense bill	Voted "aye."
Appropriation bill of \$200,000 for training of National Guard	Voted "aye."
Deficiency appropriation bill for Army and Navy	Voted "aye."
Bill providing for draft of National Guard, etc., into the service of the United States	Voted "aye."
Appropriation bill for Military Academy	Voted "aye."
Naval appropriation bill	Voted "aye."
Army appropriation bill	Voted "aye."
Bill providing for credit for service in Reserve Officers' Training Corps	Voted "aye."
Appropriation bill for fortifications	Voted "aye."
Bill providing for transfer of retired Army officers to active list	Absent.
Naval appropriation bill	Voted "aye."
Bill authorizing bond issue of \$150,000,000 for emergency expenditures	Voted "aye."
Bill authorizing the arming of American merchant ships, known as armed neutrality bill	Voted "aye."
Bill establishing an Army and Navy medal of honor roll	Voted "aye."

The above summary shows that I voted "aye" on 111 war and preparedness bills and that I did not vote against a single war or preparedness bill. The summary covers all bills and resolutions on war and preparedness that passed Congress since I became a Member. On some there was a record vote, on others there was no record vote, and some were passed unanimously, but on all, no matter how the vote was taken, when present, I voted "aye."

The foregoing summary of the war measures passed by Congress will convince anyone of the importance of its work. Never in the history of the world has there been assembled together a legislative body that responded more promptly, with less partisan differences and with less discussion, to every suggestion and demand made by the executive branch of the Government than was the response of the Sixty-fifth Congress on all measures for the prosecution of the war.

Members accepted, in many instances without question, demands not only for money, but for far-reaching powers which were never paralleled in the history of the Republic. Members recognized that the winning of the war was all important, and they were inclined to resolve every doubt in favor of the claim that the powers asked were needed to help win the war, and they promptly provided the money and the means which the executive branch of the Government stated were necessary to win the war.

I am frank to say that I have voted for and supported bills that I would not think of voting for in time of peace. I have supported legislation that extended powers to the executive branch of the Government which no one who believes in free government in times of peace would think of extending.

The far-reaching effect of the legislation passed by the Sixty-fifth Congress up to date can be understood by the following comparisons:

The appropriations for the fiscal year beginning July 1, 1918, and ending June 30, 1919, total \$24,001,450,000, which amount, added to the authorized loans to the allies, will increase the aggregate amount of the appropriations for this fiscal year to slightly in excess of \$29,000,000,000, which is more money by almost \$2,000,000,000 than it took to run this Government from 1789 to 1917, or for a period of 128 years. According to the World Almanac of 1918, the total disbursements from 1789 to 1917, excluding Postal Service, Panama Canal, and public debt, were \$27,297,716,451.

The United States will have spent as much on the war in two years, or up to April, 1919, as England or Germany spent in four and a half years. By April, 1919, the United States will have spent \$37,000,000,000 on the war, of which loans to the allies would amount, roughly, to \$11,000,000,000, leaving a net balance of expenditures of \$26,000,000,000.

Anyone who will stop to analyze the legislation passed by the war Congress and reflect upon it will see that the war of necessity has placed upon the American people obligations of almost incalculable magnitude. War has forced a centralization of power and responsibility in the executive branch of the Government never before paralleled in our country's history.

The one thought of Members of Congress in passing this important legislation and in granting these far-reaching powers has been that we should succeed in the great task that we have undertaken and that our boys in the battle lines in Europe and in our Army and Navy everywhere should have back of them every available resource of this great country.

The tide has been turned against Germany, and the tide was turned by the American Army. The splendid work of the American soldier in this war, in which he has exhibited fighting qualities that have not been paralleled, his success so far should make every true American proud, and so long as I remain in Congress it shall be my purpose to stand back of our boys and support all legislation needed to bring the war to a speedy and successful conclusion.

Military Training—New Jersey's Part in Rifle Practice— The Work Done by Gen. Spencer.

EXTENSION OF REMARKS
OF
HON. RICHARD WAYNE PARKER,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 22, 1918.

The House in Committee of the Whole House on the state of the Union having under consideration the bill (H. R. 12731) amending an act entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States," approved May 18, 1917, Mr. PARKER of New Jersey obtained leave to file a separate extension of his remarks in reference to the military training of the youth of the United States in special reference to training in rifle practice and the work that has been done on that subject in the State of New Jersey, and including some documents.

Mr. PARKER of New Jersey. The American Army has always aspired to be an army of sharpshooters, one that does not waste its shots. Bunker Hill was really a victory because of the awful losses inflicted by the Americans. Lexington and Springfield ended in a rout of our enemy by our snipers. Washington relied on his Virginia riflemen, and the glories of the rifle grew green again when Tennessee squirrel shooters won the Battle of New Orleans from the veterans of the Peninsular campaign.

The little Swiss Republic is held in awe because every Swiss man is a sharpshooter, and every shot will mean an enemy fallen. The Boer Republic of 240,000 souls held 240,000,000 at bay for many months because the Boers could use the rifle. In the siege warfare of the trenches we have gone back to artillery, the grenade, and the bayonet, but in open warfare the victory goes to the side that can make its battle line a line of death to all who show a head in opposition.

My State is proud of the work that it did in reviving an interest in rifle practice in the United States, and even in the Regular Army. In 1881 Army rifle practice was neglected, the States did little, and the National Rifle Association was dead. At that time Gen. Bird W. Spencer was commissioned by New Jersey as inspector of rifle practice. He began a propaganda through the United States. Through his efforts in 1884 the Sea Girt camp grounds and range were secured and gradually

extended and improved. In 1891 a system of interstate rifle matches was inaugurated there. In 1897 a team from the Army participated, and the wonderful shooting of our Army is largely due to the work done in New Jersey by Gen. Spencer and his interest and enthusiasm in rifle practice. In 1892 he secured the revival of the National Rifle Association and kept it alive, putting its trophies again in competition.

In 1903 he induced his friend, Hon. Elihu Root, Secretary of War, to appoint the National Board for Promotion of Rifle Practice, and to establish a national match open to the Army, Navy, and National Guard.

In the training of the Army none is more valuable than that of the men behind the rifle. I am proud of the work done by my State in the promotion of rifle practice and what has been done by my friend Gen. Spencer in that regard.

His friend Hon. Dow H. DRUKKER, now absent because of his health, furnishes me with the following memorandum from Gov. Walter E. Edge, of New Jersey, and the Hon. Elihu Root, which I print as an appendix to my remarks.

APPENDIX.

STATE OF NEW JERSEY,
EXECUTIVE DEPARTMENT,
Sea Girt, July 26, 1918.

Gen. BIRD W. SPENCER,
State Camp, Sea Girt.

DEAR GEN. SPENCER: Understanding that Congressman DRUKKER is preparing to address Congress on the subject of war preparation and the national defense, it occurs to me that it would be a very deserving tribute to have the Congressmen include in the speech, which would, of course, go in the CONGRESSIONAL RECORD, a few facts concerning your great activity in the development of rifle practice in this country. From information I have had, you are practically the father of small-arm practice, and it should be properly recorded. I am inclosing you some memoranda which if you will forward to Congressman DRUKKER, I am sure he would be glad to embody in such a speech.

Very sincerely,

WALTER E. EDGE, Governor.

Memorandum for Congressman Dow H. DRUKKER from Gov. Walter E. Edge of New Jersey, accompanying letter of July 26, 1918.

1. Brig. Gen. Bird W. Spencer was commissioned May 28, 1881, Inspector General of Rifle Practice of the State of New Jersey, following the enactment of a law creating the office.

2. An enthusiastic rifleman, he at once began a propaganda for the promotion of rifle practice, not only in his own State but throughout the United States.

3. The Army rifle practice was at low ebb, practically no effort was made to develop this important branch of the military service. The States were doing little. The National Rifle Association was dead.

4. Gen. Spencer, therefore, took up the burden under most discouraging circumstances. Himself a fine shot, he inspired others to help. Through his efforts in 1884 the Sea Girt rifle range and camp grounds were secured. He built the rifle range by degrees, obtaining a small amount of the sea coast at the start and influenced the New Jersey State authorities gradually to purchase all the ocean front which is now included in this, the finest and most complete rifle range in this country and probably in the world.

5. In 1891 he inaugurated a system of interstate rifle matches at Sea Girt, but it was not until 1897 that teams from the Army participated with those from the States. In that year a company team was entered from the Army which finished sixth in a field of seven entries.

6. He is to-day, at nearly "three score years and ten," still the head of the Department of Rifle Practice of New Jersey and an inducement for progressiveness in rifle shooting all over the world. He still holds his place as an expert rifleman, qualifying every year with scores which are the envy of many younger men.

7. The question is often asked, "How do we account for the wonderful shooting of our Army—Regulars, National Guard, and National Army—in France?" If you will ask any officer of the Army who has been in service for any length of time, he will admit that Brig. Gen. Bird W. Spencer, the inspector general of rifle practice of the State of New Jersey, is entitled to more of the credit for the efficient shooting of our boys than any other one man in the country.

8. His enthusiasm and influence in rifle practice during the past 40 years has won for him the well-deserved title of "The father of rifle practice in the United States."

9. In 1892 the National Rifle Association, which had been dead since 1882, was by his sole efforts revived, and the historic trophies, the Hilton trophy, the Soldier of Marathon, and the Wimbledon cup, were again put in competition.

10. By his own efforts and largely from his own means he kept the National Rifle Association alive, acting as its president until 1907, and is to-day a life director in that association.

11. In 1903 he induced his personal friend, the Hon. Elihu Root, then Secretary of War, to appoint a board, entitled the "National Board for the Promotion of Rifle Practice in the United States," and to establish a national match open to all branches of the Army, Navy, and National Guard. Gen. Spencer was a member and vice president of the board from its formation, in 1903, until very recently.

12. In 1901 Maj. Gen. Wesley Merritt, United States Army, then honorary president of the National Rifle Association, said in the report for that year: "For eight years Gen. Spencer and the New Jersey State Rifle Association have, by the expenditure of thousands of dollars and a vast amount of labor and time devoted to the project, kept the National Rifle Association of old, handed down from the early days of 1871, alive, so that it might be reorganized and become the nucleus of a great rifle-shooting revival in the United States. But for Gen. Spencer's and their efforts, and the persistent advancement of this work, and his urging of the necessity upon Secretaries of War—and, yes, Presidents of the United States—the spirit of competition in rifle practice, the getting together of teams for annual competitions, and the putting up of prizes as an inducement for shoots, would have remained where they were in 1892, when he rescued the National Rifle Association and its time-honored trophies from total oblivion."

13. I commend these facts to your consideration, as he is one of your constituents. Gen. Spencer deserves well of our country, and I beg to suggest that you invite the attention of Congress to these facts.

Hon. Elihu Root, former Secretary of War, under date of July 31, 1918, writes:

"I was quite familiar with Brig. Gen. Bird W. Spencer's New Jersey relations to rifle practice 15 or 16 years ago, and I fully agree with Gen. Merritt's statement about it. At this time, when Congress is discussing and acting upon so many important military measures, this brief history ought to have a place in the CONGRESSIONAL RECORD. It is one of the best illustrations of the value of preparation, for it is to the kind of work that he did that we owe the fact that we have had a body of men competent to train the great mass of the American Army to use their rifles effectively."

EXTENSION OF REMARKS

OF

HON. BENJAMIN K. FOCHT,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 21, 1918.

Mr. FOCHT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following:

MANUFACTURERS RECORD,
Baltimore, September 18, 1918.

HON. BENJAMIN K. FOCHT,
House of Representatives,
Washington, D. C.

DEAR SIR: Having just read a copy of your speech on the shortage of news-print paper, under date of August 27, I inclose an editorial from the Manufacturers Record of last week showing that the War Industries Board denies to country papers the privilege of paying for subscriptions to other papers in advertising. In other words, a paper which might wish to carry an advertisement in payment for the subscription for another paper can not do so. This, I think, is carrying the matter even further than any point raised in your speech.

Very truly, yours,

RICHARD H. EDMONDS, Editor.

[From the Manufacturers Record, Sept. 12, 1918.]

THE WAR INDUSTRIES BOARD ORDERS THE DISCONTINUANCE OF ALL NEWSPAPER EXCHANGES.

The decision of the War Industries Board requiring newspapers to discontinue exchanges in the interest of the conservation of paper is, we believe, an unwise move; but we are compelled to bow to that decision, and therefore, greatly to our regret, we shall be forced to discontinue all of our exchanges.

Believing that a number of the smaller weeklies with which we have gladly exchanged in the past might prefer to pay a subscription to the Manufacturers Record in advertising rather than in cash, we asked of the War Industries Board if this would be permitted. In reply we have the following letter:

"We have your letter of September 3 asking us to allow subscriptions for exchanges to be paid in advertising. All daily newspapers, country weeklies, and other periodicals have been ordered to discontinue exchanges, and we can not make an exception to the rule in your particular instance. If your country exchanges find the information contained in your magazine of such benefit to them, they will no doubt not hesitate to send you their paid subscriptions. We are unable to give you the permission you wish.

THOMAS E. DONNELLY,
"Chief Pulp and Paper Section."

This decision, which forbids the payment for a subscription in advertising, is, it seems to us, illogical and unwise. If, for instance, the *Booneville Herald* desired to subscribe for the *Manufacturers Record* and offered payment in \$6.50 worth of advertising rather than pay that amount in cash, we do not believe that the Government should deny to that paper the privilege of doing so. Moreover, we do not believe that the Government should deny a newspaper the privilege of accepting advertising instead of cash in payment for subscriptions. Nevertheless, as this is the decision of the War Industries Board, we necessarily accept it and shall comply to the letter of the law with every requirement demanded by the Government.

We fully appreciate the tremendous burden which rests upon those in authority in Washington, and know full well that they can not always give consideration to every detail of every plan submitted to them. Hence, like all other good citizens, we accept any decision of the Government, and while regretting this necessity we shall rigidly adhere to the mandate of the War Industries Board until the board can be made to see the error of its plan, not only in respect to discontinuance of exchanges but in all other respects.

We shall greatly miss the privilege which has been ours for a third of a century—of exchanging with hundreds of the smaller weekly papers throughout the villages and towns of the South and Southwest. For many years it has been our custom to exchange with every Southern paper that was sufficiently interested in the work of the *Manufacturers Record* to desire to receive it, and though the actual cost of the *Manufacturers Record* might be from five to ten times the cost of the subscription to the country weekly we preferred to exchange on an even basis, knowing that we would find in the country weekly much that was of interest to this office, and we believed that the *Manufacturers Record* would be of interest to the office of every country weekly whose editor was sufficiently interested in the progress of the South, and of recent years in the war issue, to desire an exchange. Where the country weekly does not feel financially justified in subscribing for the *Manufacturers Record*, we believe that our subscribers in the smaller communities could wisely pass their copy on to the local editor, and in that way help to spread to the community the facts given in it on the Nation's war activities. Indeed, every subscriber might make it his business to discuss with all the

editors in his community the war work of the *Manufacturers Record*, for the need of it is shown in a letter from Mr. Arthur W. Chapman, of New York and Washington, who writes us as follows in reference to an interview he had with the editor of a Washington daily:

"The writer called upon the city editor of one of the large Washington dailies to urge the printing of some of your editorials.

"It seems that the reason for his policy of giving the people 'the optimistic side of the war' is that they can only be so prepared to bear the casualty lists. It seems childish, but the idea seems to be that we will want to surrender as soon as the casualty lists grow to, say, one-tenth the size of England's or France's. But if we are led to believe that the war may be over by Christmas of this year we may be able to hold out.

"I put up as strong an argument as possible in the way of the necessity of awakening a sleeping nation from the snug complacency that the first person need have no worry and need make no real big sacrifice for the country, all powerful against a beaten Hun. The editor called this pessimism and said his policy was optimism, cheering the people that it would soon be over. Naturally a lot of bosh dailies follow the lead of the Washington papers. There is a man's-sized job for the editor who can see."

Here is a case where the American people are being seriously misled by undue optimism, against which the Army officers in Europe are urgently warning us, and yet a daily paper in the city of Washington takes the ground that it must mislead the people by optimism in order to keep them from worrying and preventing their realizing the sacrifice which must be made. What shall be said of any newspaper which takes such a position?

A Heart-to-Heart Talk with Our Boys in Khaki.

EXTENSION OF REMARKS

OF

HON. JOHN M. BAER,
OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 12, 1918.

Mr. BAER. Mr. Speaker, I recently addressed many thousands of soldiers in the camps in Washington and vicinity. When the Y. M. C. A. and other organizations call on me to speak to the soldier boys I feel it not only a privilege but a duty to accept the invitation. I am always proud to tell them that Congress is standing squarely back of them to win the war and that the vast majority voted, as I have done, for every measure which will aid in the vigorous prosecution of this great conflict. We in Congress should not only take a deep interest in the welfare of the boys during the war, but we should begin to make preparations for the reconstruction period. We should see to it that these boys, who have risked their lives for democracy, can come home to enjoy the greatest advantages and opportunities possible.

I am going to support a measure which will carry out the recommendation of Secretary Lane. He informs us that there are about 15,000,000 acres of arid land, 75,000,000 acres of swamp land, and 200,000,000 acres of stump land which can be utilized by the Government. I believe we should reclaim these vast areas and transform them into good farm lands, so that they can be turned over to the American soldiers when they come home. The soldier boys are entitled to an opportunity to secure homes from the Government they have defended. I hope Congress will immediately appropriate the sum required to initiate this splendid work. North Dakota is already preparing to take care of the returned veterans, and I believe it will be the most attractive State in the Union for our valiant soldiers when they return.

After being employed for two or three years in construction work our soldiers will have accomplished the reclamation of a large area of this land. Many will engage in agricultural pursuits, but new communities of tradesmen and others required for the wants of the new farmers will also spring up and afford occupation for other soldiers and their families. I believe this program, when worked out, will have public approval, and Congress should give this plan its unanimous support.

Our armies are coming home victorious. The last few days on the western front have made this certain. We will greet them and cheer; we will banquet and feast them, but we also want to do something that is not temporary but permanent. Such legislation has already been enacted in the British colonies and in the United Kingdom, also in France. The soldier boys are intensely interested in knowing what Congress contemplates doing for them after the war.

Last Sunday evening I talked to over 7,000 men in khaki out at Camp Humphreys, Va. The boys have cleared the forest on the side of a hill and constructed an open-air amphitheater. The presence of the boys in uniform and the commingling of sky, hill, vale, and stream presented a scene never to be forgotten.

I ask permission to extend my remarks on this occasion in the Record:

"Ladies, gentlemen, and 'soldiers of freedom,' it is with the utmost pleasure, and also with a deep sense of responsibility, that I presume to address you, for, as the baby Congressman, an appellation given me because of being the youngest Member of that body, it gives me courage and confidence to speak to you heart to heart; it nevertheless reminds me that in these strenuous times, affording such unlimited opportunities for progress, I may, with all due humility, assert that I have outgrown the appellation, although, like all pet names, it may cling even to maturity. With this brief introduction I wish to go straight to the subject matter of my thought.

"In the realm of humanity there are three great fundamental needs—the threefold development of the physical, mental, and spiritual elements in their natural order. St. Paul says, 'That which is natural is first; that which is spiritual last.' Between these is the middle element—the mental—which is of paramount importance, especially for you who are entering a new field of experience. You are to go forth to fight for the highest ideals of government and for justice and liberty. That is your aim and motive in this world combat.

"We claim with pride to be a great Nation, and justly so, but let us stop for a moment to consider what we mean by a great nation. Is it only to possess great wealth, power to dominate and subjugate, or is it a great multitude of men who are true to each other, loyal to the right, strong, and of worth?

"Soldiers in the world's history have given their lives for false fame and a cruel power; they knew no better, perhaps. You to-day are ready to give your lives for true fame, beneficent power, and this work is close to each one of you, for your mind and spirit are awakened to the sacred duty confronting you. Conscious of this privilege you can enter this war with thrill of soul. Justice is for all or it is for none. No tyrant was ever free.

"Man's hope of justice will ever be an idle dream and his quest for liberty a fool's errand until he is willing to be just and meet the conditions of freedom. A nation does not become great by merely multiplying and expanding; flies do this in greater perfection than men. Nor does a nation gain strength by seizing dominion over races whom it can not benefit. For example, Austria is but weakened with her conglomerate mass. No government is ultimately strong but in proportion to its justice and kindness.

"It is unnecessary for me to say that the training and camp life provide in the most efficient manner for your physical welfare. And it is befitting here to voice the fact that this Nation owes a debt of the deepest gratitude to the religious organizations for the splendid work which they are carrying on in our camps for the moral and spiritual needs of our soldiers. The moral and spiritual development of man is of supreme importance. A spiritual man may be compared to a light, and the merely materialistic man to a lamp; without the light the lamp is of no real service. The bonds of a common humanity are the constitution of world government and the outcome of this great war will establish a universal brotherhood of mankind. Thus war may be the greatest means for peace.

"Now, we will speak of the third great need of development, the mental faculty. This holds almost equal rank with the moral and spiritual. We say, 'almost,' because merely intellectual development, not reinforced by the spiritual, can be and often is put to perverted use; however, the neglect of the mental capacity may lead to even more stupid evils and should be shunned and abhorred. Therefore, I earnestly charge you to think constructively and creatively. Even though your voice may not be heard in the councils of the generals, your mind may work out the problems which they have to solve; in all probability many of you may be promoted to higher positions before the end of the war, and it is up to you whether you are prepared to fill these positions in the most efficient manner. This is your time of test as to capacity and ability. Challenge your manhood; make it your business not only to be a good soldier, but to be the best-equipped man possible in an all-round development. On duty or off, concentrate all your faculties to a determined purpose. It is just this difference between doing a thing well and doing it the very best you know how that causes the great gap between the ordinarily successful man, often the result of mere chance, and the eminently successful man who has used every means to accomplish his end. You can not afford to neglect what is often superficially regarded as the little things not much worth while. 'Trifles make perfection, but perfection is no trifle.' The care and extra effort applied in the doing of a thing at its best have laid the foundation for all the statesmen, the generals, and the great characters of history.

"It was only yesterday that I read of a Welsh miner who enlisted in the English Army as a private. I think his name was Godfrey Jones. He was soon promoted to a noncommissioned officer, then received a commission. Later he did such good work he was decorated for distinguished service, and in his endeavor to become the best commissioned officer he was promoted again, until he has finally reached the rank of brigadier general. This promotion is typical of the armies of all the democratic nations. It shows that a man from the lowest rank can reach the highest position for which his ability and service fit him. He has a higher position than the heir to the British throne and a higher rank than the Crown Prince, who has evidently merited no promotion since the outbreak of the war. It is the type like this young Welshman who was loyal to the principles for which he was fighting, in defeat as well as victory, that brought him this honor. The strongest test of loyalty is when a man is engulfed in disaster and courageously stands by his guns. He is the same type as our American soldier, and I feel sure that you will become the heroes of the hour, as our men have in the battles at Chateau-Thierry and Belleau Wood.

"What is true of your military life will also be true of your civil and industrial life when you return. There is no country in the world where a man has the advantages and opportunities that he has here in a democracy. Think of it—a child from the humblest home in the land, without money, influence, or position, can strive for the highest office for which his abilities, his character, and genius fit him.

"For thousands of years before the establishment of our Republic no form of government was devised that could secure for its people any one of the great fundamental privileges for which our Republic was primarily organized. In that vast period of time there was no government that secured for its people religious freedom. This is the liberty which gives every man the right to serve God according to the dictates of his conscience. No nation had secured for its people the freedom of speech, freedom of the press, security of individual rights, popular education, and universal franchise. It is a startling statement, but in reviewing all those centuries prior to the founding of our Republic no people enjoyed these great advantages. Furthermore, no historian can point to any form of government in that long period and truthfully say, 'Here is an ideal government and one that works well.' Not until our forefathers, with their farsighted vision, practical wisdom, and moral courage formed the United States of America was there one successful government.

"In his popular work 'The American Commonwealth,' written 30 years ago, Mr. Bryce, afterwards ambassador from England, wrote as an opening sentence in the first chapter, 'What do you think of our Government? is the first question addressed to a European traveler in the United States by each chance acquaintance.' We ask this question with unusual pride. All Americans are proud of their form of government, and especially now, when all the nations of the world are striving to make it universal. No traveler in Germany was ever asked this question, because I can not believe that the German people feel any pride in a government which is not theirs but is the Kaiser's and his ilk. In a democracy the government exists for the people; in an autocracy the people exist for the government. It is this conflict between these two forms of government which is going to be decided by this war. One-eighth of the world is autocratic and the other seven-eighths is democratic. The autocratic portion is like a disease—a cancer. The soul of Germany has been poisoned by Prussianism. We are compelled to perform an operation. We will have to cut it out or this diseased portion will infect the whole body.

"When we have our forces mobilized and backed up by the organized economic and industrial forces in this country, and focus all our strength on the western front, we shall not be long in obtaining a decision.

"Following the adoption of the Constitution and the formation of this Republic there began the greatest era of progress governmentally that the world has ever known. By these principles we solve problems which have baffled the philosopher and statesman for ages. These reforms in popular government have been going on for a century. The light of liberty was first set aglow on our altars of freedom, and the sparks ignited other nations. They were struck with awe and admiration, and marveled at the results achieved as the new light of the young Republic shone with radiating splendor upon old problems and difficulties dispersed as mists before the rising sun. Never in the history of the world had such political privileges been secured to any people. Forthwith the older nations began to modify their ideals and forms of government, gradually becoming more tolerant of religious freedom, more anxious for civil liberty, more considerate of individual rights, more active toward popular education, and favorable toward universal franchise.

To-day mere class distinctions among men are being burned to ashes in the flames of the fires of liberty.

"England the motherland, France the beloved, Italy, and all the nations changed their institutions and became more democratic. The sparks from liberty's torch have even blown to far-off Germany. I shall always believe that it was this fact that the people of Germany were restless and anxious for new forms of government that was the initial cause of the war. The Kaiser knew that his people wanted to take a hand in the government of their own affairs. They wanted more representation at the seat of government, just as the free people of all other nations. He could not hold down the lid of autocracy on this fermenting spirit of liberty which was manifesting itself. He knew that if he could get into war he could quell the disturbance and put an end, for a time at least, to these smoldering embers of democracy which were ever falling closer to his throne. The Kaiser was more afraid of internal strife than of an invading army.

"That there is a larger, deeper reason, however, back of all this world strife I deem it timely to mention. No lasting peace can come to the world until mankind as a whole comes to realize its own shortcomings. The world combat is between the forces of altruism and selfishness. One of these must conquer. I believe altruism will, for when all is said and done, the sins of men must be recognized as a disease and not as their true nature. It is a folly which can be remedied and not a necessity that must be accepted. The fact must be recognized that man is created in the image of his Maker. Therefore it is possible that he may aspire to infinite heights. Let us not be so shortsighted as to limit human nature in its possible achievements. We often find it, where we least expect it, to be a much higher thing than we thought it, and let us beware, for if we persist in thinking it base and low we cause it to become lower, for the power of thought is a masterful factor not nearly enough considered.

"Human nature is capable of infinite heights and infinite descents. False prophets we have always with us, who tell us men are nothing but rascals, thieves, grafters, or wolves. If we believe that, we may sink to that. Refuse to accept it, have faith in yourself, have faith that God made man upright, and strive to become what your highest ideals stand for, and not only America but the world will owe you an everlasting debt of gratitude.

"In conclusion, I would remind you: This old planet is awake! The whole world is astir; we are doing things every hour as never before. We are filling the oceans with ships; we are plowing up the earth, planting it—even the very deserts are being made to bring forth food. We are writing a new charter of liberty for the whole world in the same spirit that our forefathers wrote the Declaration of Independence. The time for a world standard is immediately before us. This tremendous world conflagration looks like a conflict of mind against mind; but it is not. Looks are deceiving. Do not be misled by appearances. This great war is the conscious spirit of man fighting to live—to live spiritually and eternally."

William Crittenden Mooney.

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 17, 1918.

Mr. HOLLINGSWORTH. Mr. Speaker, on Wednesday, July 24, 1918, in a hospital at New York City, following a critical surgical operation, Hon. William Crittenden Mooney, a prominent citizen of the State of Ohio, a distinguished Member of the Sixty-fourth Congress, and well known to most of the Members of this House, died, suddenly and unexpectedly to his friends, in the full flush of his mental powers and at the very zenith of a life of rare usefulness to the community and State in which he lived. There was no twilight zone of anxiety and waiting; the angel of death simply touched him and he was at rest.

A devoted husband and father, a kind, obliging neighbor and friend, a loyal, upright business associate, a faithful Member of Congress, and a true representative of the highest type of American manhood, his passing was of more than ordinary interest, and at his funeral, July 29, in Woodsfield, Ohio, amid the scenes

of his childhood and the later activities of a busy life, there gathered a vast concourse of people from far and near, all of whom, experiencing a feeling of personal loss, were there, quietly and unostentatiously, to pay a last simple tribute of friend to friend. From town and countryside came mourners by the hundreds, strong men who had known him intimately and appreciated his high character and unselfish aims in life, and in many instances had shared with him his open-hearted generosity.

He was the patron saint of a beloved people.

He was par excellence, like the tall oak of the forest, the big man of the community in which he lived, and yet his influence, broad and gracious, was not limited to local surroundings; it radiated and extended over the State and Nation.

A patriot, sincere and true, he gave to his country two noble sons for the supreme sacrifice, if need be, and with pride of heart constantly wore on the lapel of his coat the sacred emblem of his country, its service flag with two white stars, and thoughtful friends at the funeral left it there to be buried with his body, feeling that he would have wished it so could he have spoken to them.

The passing of such a soul truly challenges our deepest thought. Its course is over the gold-paved highway from earth to heaven. Death is but a forward movement; earth's activities cease, but in a fairer clime man's destiny works itself out to full fruition. With such a spirit the realities of life are merely milestones on the way, beacon lights as it were for the weary traveler, signboards on the uproad pointing to the great beyond, and beckoning forward those who wish to follow on to the heavenly goal.

With a heart overflowing with generous impulses Mr. Mooney's friends were legion and his enemies negligible.

It seems fitting, therefore, having been a Member of the American Congress, some of his foremost distinctions should be mentioned in any public record announcing his death.

Living in a rural county with no railroad connection with the outside world, he and his father, the late Col. S. L. Mooney, organized, built, and successfully operated a line of railroad for that purpose. Following this, local financial conditions required increased banking facilities, and the Monroe County Bank was organized by the same parties and soon became widely known as a farm-loan and home-borrowing center. It is said no worthy borrower ever applied to it in vain for a loan. A new courthouse, new churches of different denominations, enlarged public-school buildings, good roads, and other public improvements followed in quick sequence and each and all of them were understood to have the encouragement and substantial assistance of the Mooneys, father and son. Any needed public improvement brought to their attention was an inspiration to action on their part.

Before their activities began the soubriquet, "dark hills of Monroe," was universally applied to the locality and good-naturedly accepted; but since then the county has become one of the most advanced and progressive counties in the State.

Mr. Mooney's one term in Congress was too brief for anyone to win notable distinction as a legislator. Even if the arbitrary rule of seniority, still all powerful in the House notwithstanding the breaking up of absolutism in the Speaker by the Sixty-first Congress, had not stood in the way, Mr. Mooney's inherent modesty would have restrained any kind of self-seeking on his part. He never undertook to address the galleries or sought special committee service or attempted to stuff the Record with vainglorious display—permissible weaknesses in the minds of some who far outranked him in the public eye. This of itself revealed in him real merit, and had he been permitted to remain in Congress he possibly might have risen in time to the rank of McKinley, Garfield, Hayes, Sherman, Thurman, Bingham, Foraker, Hanna, and others of like modest mien, who have in former years given marked distinction to the Ohio delegation in Congress.

As it is, those of us who knew Mr. Mooney intimately realize how conscientiously he discharged every public duty, however small or inconsequential, that fell to his lot without complaint or envy of those who occupied more space than he in the public press and in the "hurrah" of the multitude. Without the slightest disparagement of the present very able and hard-working Representative from the district, or of such former Representatives as Grosvenor, the elder Dawes, Gen. Warner, and others, typically conspicuous as they were, I do not believe the district ever had a more conscientious, conservative, or better Representative than Hon. Mr. Mooney, an all-round safe public servant who looked carefully after local details without in any manner losing sight of the broader matters of national concern.

His keen business instinct led him first of all to secure an able private secretary, capable of relieving him of much office drudgery and ordinary routine work, so that he might have more

time to study, as he did, and understand before voting every measure of importance that came before Congress during his term. As a result his fair-minded constituents with one accord, in fact, without distinction of party, honored and respected him for his conscientious attention to the thousand and one minor details of his office, as well as the larger affairs of government.

It is said that no letter ever came to his office and failed to receive a reply.

The inquiry of an old soldier or his widow on pension matters, a workman's inquiry about proposed legislation likely to affect his interests, like information when sought by the farmer, manufacturer, or other business man—in fact, labor and capital in any and every form received from him prompt and candid consideration.

No constituent ever charged him with partiality or subterfuge in the discharge of duty.

He was, indeed, to my mind an ideal Congressman, and I thank the Speaker and Members of this House for the opportunity of placing this fact of record.

In the tragic crossing of the bar by Mr. Mooney, Ohio lost a distinguished public servant, his business associates a wise, prudent counselor, his family a devoted, loving husband and father, and the community in which he lived a most valuable citizen, whose place it will be difficult to fill.

May his memory remain fresh and green as an incentive to those who must take up the tasks he left unfinished.

War-Revenue Bill, 1918—Tax on Pistols and Revolvers.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 19, 1918.

Mr. LONERGAN. Mr. Speaker, the revenue bill under discussion, Title IX, section 900, paragraph 11, imposes a tax of 25 per cent on all pistols and revolvers sold by the manufacturers, other than such as may be sold during the present war to the United States, political subdivisions thereof, or allied nations, as against a tax of 10 per cent on rifles, shotguns, shells, and cartridges.

Obviously this is discrimination against the manufacturers of pistols and revolvers, who should be taxed only so much as the manufacturers of shotguns and rifles.

There are five large manufacturers of pistols and revolvers in the United States, of which the Colt's Patent Firearms Manufacturing Co., of Hartford, Conn., is the largest. The Colt company has devoted 90 per cent of its products to the service of the Nation since the opening of the war, and will so continue as long as the war lasts. It has postponed and will continue to postpone deliveries on commercial orders. Of the small product delivered on commercial orders, 90 per cent has been sold to municipalities and for the protection of essential plants. The same is practically true of the other manufacturers.

The Colt company now has commercial orders aggregating \$628,991.81 awaiting delivery after the termination of the war. These orders were accepted at flat rates. Hence the tax proposed can not be transferred to the purchasers. These orders, more than 85 per cent of which were accepted prior to the declaration of a state of war, have not been filled, because at the outbreak of the war the Colt company, from patriotic motives and at loss, immediately devoted its entire plant to the production of arms for the United States and its associates to the exclusion of commercial business. Because of this patriotic action the Colt company will become liable to a special tax of \$157,247.95 on these postponed orders, if the bill passes as it now reads.

As is indicated on page 1187, Part II, of the Hearings before the Committee on Ways and Means, House of Representatives, on the proposed revenue act of 1918, the expressed desire of the author of the bill originally proposing such a tax is the reduction in the sale of revolvers and pistols. All the great nations of the world will be equipped to manufacture firearms at the close of the war. Hence a very heavy tax on revolvers and automatic pistols manufactured in the United States will result inevitably in the substitution of foreign makes in all foreign markets. The industry in the United States will natu-

rally be discouraged and the result will be to put the United States at a disadvantage in the event of another war.

The present war is being fought in France because Germany was prepared and England and France were not. The great German works at Essen had plants, machinery, equipment, carefully trained organizations, and experienced operators all ready for the immediate production of arms in huge quantities. In France and England, as in the United States, it was necessary to build factories, create machinery, form new arsenal organizations, and train ballistic engineers as well as mechanics before quantity production could be developed. As a result, some of the best troops of England and France were sacrificed and the cause of freedom jeopardized during the time preparations, long delayed, were made to meet iron with iron and gun with gun. This must never be allowed to happen again.

If it were not for the splendid organizations built up by the revolver and pistol manufacturers in the country prior to the outbreak of the war, the country, with no similar factories under Government jurisdiction, would have been in a bad way, indeed, procuring such products.

It is to be hoped that this will be the last war. History, however, tells us not to be too sanguine in our hopes. Other nations than Germany have in the past set out to conquer the world. Clearly it is the part of wisdom from now on to be prepared. Reasonable preparedness demands the provision of adequate factory equipment and trained organizations for quantity production of munitions. Only by encouraging, rather than discouraging, such manufacture can this preparedness materialize and continue.

A measure designed primarily as a police measure should not, of its very nature, be incorporated in a measure to provide revenue. The proper place for such propositions is the legislative bodies of the several States. The constant carrying of concealed weapons is undesirable and is limited in substantially all civilized States. But the purchase of revolvers by respectable citizens is desirable and rarely limited in civilized States. It is the best protection of the home against marauders. It trains the citizenry in the accurate use of arms should a national emergency arise.

The policy of this tax is undesirable in that it will tend to discourage preparedness, to centralize the manufacture of side arms in foreign countries, to increase rather than decrease domestic crime, to place a premium on initiative in our manufacturing industries.

Furthermore, the revenue bill purports to raise revenue for the war. The revenue under this paragraph to be raised during the war will not be appreciable.

The State of Connecticut, through its manufacturers, has no complaint to make against equitable taxation. With her sister States, she has borne ungrudgingly her share in the raising of revenue for war purposes. The figures in the office of the Collector of Internal Revenue show this. In 1915 the total internal-revenue receipts from the State were \$3,222,249.67. In 1916 the total receipts were \$5,295,874.32. On April 6, 1917, the Government formally declared to exist the state of war thrust upon it by the Imperial German Government. From April 1, 1917, to June 30, 1918, there was collected in Connecticut under internal-revenue laws the sum of \$84,522,102.74. Of this amount \$15,926,778.98 represented the total ordinary and war-revenue receipts, except income and excess-profits tax, or more than three times the receipts for 1916, and the remainder, or \$68,595,323.76, represented income and excess-profits tax receipts. In short, Connecticut paid in war and internal-revenue taxes from April, 1917, to June, 1918, more than fifteen times its total payments in 1916.

Her record is her reason for insisting on equity in the pending bill.

The industries of the State have been brought to their present high development through the genius of their founders and the energy and aggressiveness of their subsequent managers.

Whether one considers the machine shops of Hartford, New Haven, New Britain, Waterbury, and Bridgeport, employing thousands of skilled workmen; the munition plants of Hartford, New Haven, Meriden, and Bridgeport; the brass-rolling mills of Bristol, Waterbury, Torrington, Ansonia, and throughout the Naugatuck Valley; the mills of the eastern section of the State; the foundries in all its large cities, and the large establishments for producing products for domestic use throughout the whole State, one is impressed by the spirit of the men responsible for such success. Far removed from the sources of supply for their raw material, distant from the coal fields, without which power is impossible, handicapped by inadequate transportation, and forced to compete with industries more happily favored by nature, Connecticut plants, thanks to the ability, integrity, and courage of both owners and operators,

not only established themselves high in our national life, but occupied such a position at the outbreak of the war that the State at once became the arsenal of the land. Those already making munitions of war readily expanded; those occupied in domestic trade took steps at once, wherever possible, to transform all work to essential war work.

Connecticut is often called the land of steady habits. Not the least of these is its habit of success.

The Water-Power Bill.

EXTENSION OF REMARKS

OF

HON. NICHOLAS J. SINNOTT,
OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 13, 1918.

Mr. SINNOTT. Mr. Speaker, under leave to extend my remarks in the Record, granted to me on September 13, I wish to have printed a synopsis of the water-power bill, which passed the House on September 5. This synopsis was prepared by Mr. O. C. Merrill, chief engineer of the Forest Service, at my request, to correct the many misleading statements appearing in the press concerning the provisions of the bill, and particularly concerning the recapture provision, and also the effect of the bill upon public ownership and operation of water powers.

MEMORANDUM ON THE WATER-POWER BILL (S. 1419) PASSED BY THE HOUSE OF REPRESENTATIVES SEPTEMBER 5, 1918.

RÉSUMÉ.

The water-power bill passed by the House of Representatives on September 5, 1918, establishes the policy of continued public ownership and control of power sites on the public lands and of power privileges on the navigable rivers, and their development by public and private agencies in conformity with this policy and under conditions fair to the investor and fully protective of the public interest. The administration of the bill is placed in the hands of a commission composed of the Secretaries of War, Interior, and Agriculture, who are granted ample power for putting the provisions of the bill into effect.

The right to develop water power on the public lands and navigable rivers may be secured under license issued by the commission. These licenses may be issued for such period, not greater than 50 years, as the commission may fix, but may be terminated at any time through condemnation proceedings instituted by the United States or by any State or municipality. At the termination of the license period the United States may take over the properties for its own use or for the use of a State or municipality, may issue a new license under new conditions to the original licensee, or may issue the new license, under similar conditions to another private applicant. If the properties are taken over by the United States or by a State or municipality, settlement may be made, at the option of the purchaser, either on the basis of the then value of the properties as determined in condemnation proceedings or on the basis of the "net investment." The latter amount can never be greater than the actual original cost of the property, and under ordinary circumstances will be much less.

The bill provides for full control over the initiation of every enterprise and over the construction and operation of the works. It requires that development shall be made in such manner as to provide adequately for the needs of the market and for the full utilization of the resources of the area affected, that the plant shall be maintained at all times at full operating efficiency, and that adequate financial provision shall be made for all necessary repairs and replacements.

The commission is authorized and empowered to prescribe a system of accounting for all licensees, to have access to their books at all times, and to require the submission of statements or reports concerning the operation of the business. Full provision is made for regulation of rates, service, and securities by either the State or the Federal commission, and earnings, if any, in excess of a specified rate of return may be applied, upon order of the commission, either to the reduction of capital account or in refunds to customers. In any valuation for the purpose of fixing rates the licensees can not claim, or the commission allow, any values in excess of the actual cost of the properties.

The above matters are considered in detail in the following pages. References are made to the sections and to the pages and lines of the Senate print of September 6, 1918.

RETENTION OF PUBLIC RIGHTS IN PUBLIC LANDS AND NAVIGABLE RIVERS.

If the bill becomes law no right to develop water powers on public lands or navigable rivers can be secured except under its provisions. All other existing "acts or parts of acts inconsistent with" the provisions of the bill, with the sole exception of the special act in behalf of the city of San Francisco, will be repealed (sec. 29, p. 53, line 12). The bill also provides that upon the filing of an application for a power site on the public lands, such lands are automatically "reserved from entry, location, or other disposal under the laws of the United States until otherwise directed by the commission or by Congress" (S. 24, 51:17). Such lands may afterwards be acquired only with an express reservation in the patent "of the right of the United States or its permittees or licensees * * * to use any part or all of said lands necessary * * * for the purposes of the act, * * * and no claim or right of compensation shall accrue from the occupation or use of any of said lands for said purposes" (S. 24, 52:7). Under this provision the United States will have the exclusive right in perpetuity to use or to permit the use of power sites on the public lands for power purposes.

PUBLIC OWNERSHIP AND OPERATION OF POWER PROJECTS.

The bill is not intended as a measure for the development of water powers by the United States itself, but primarily for development by private agencies or by States and municipalities. It does not, however, in any respect limit the right of the United States to embark upon a policy of governmental development to any extent or for any purpose that Congress may approve. Furthermore, it specifically provides: (A) That in case the commission shall find that any navigation dam which may hereafter be built in whole or in part by the United States "may be advantageously used by the United States for its public purposes, no license therefor shall be issued until two years after it shall have reported to Congress the facts and conditions relating thereto" (S. 4 (d), 30:1); (B) that if application is filed for any project upon a navigable stream and the commission shall find that the navigation facilities which are required can not reasonably be provided by the applicant, no license shall be issued until the commission shall have reported upon the project to Congress with recommendations for participation by the United States in the construction (S. 12, 40:17); (C) that whenever the commission believes that any project on the navigable rivers or upon the public lands should be undertaken by the United States itself, it shall not issue a license therefor, but shall make full report upon the subject to Congress with recommendation for construction by the United States (S. 7, 34:3); (D) the right of the United States to acquire title at any time to any project under license and thereafter to maintain and operate it is expressly reserved (S. 14, 42:17); and finally, (E), in times of public danger the President may commandeer any project under license, retain possession for such length of time as may be necessary, and then restore the property to the owners upon the payment of "just and fair compensation," to be "fixed by the commission upon the basis of a reasonable profit in time of peace" (S. 16, 44:16).

Under the provisions of the bill States and "municipalities" (S. 3, 25:18) are preferred applicants (S. 7, 33:17), and "any State or municipality likely to be interested in or affected by" any application of "any person or corporation" must be immediately notified of such application (S. 4 (e), 30:12). To the extent that the power developed is used "for State or municipal purposes" (S. 3, 25:23), no charge is to be levied upon any State or municipality (S. 10 (e), 38:2), except for the use of surplus power at dams owned by the United States (S. 10 (e), 38:9).

States and municipalities are granted the right of eminent domain if necessary to acquire lands or other property needed in making a power development (S. 23, 50:1), and the bill further provides that the right of "any State or municipality to take over, maintain, and operate any project licensed under this act at any time by condemnation proceedings upon payment of just compensation is hereby expressly reserved" (S. 14, 43:21).

PUBLIC CONTROL OVER PRIVATE PROJECTS—CONTROL OVER INITIATION OF PROJECTS.

The commission is authorized to issue preliminary permits (S. 4 (e), 30:9) for a period not exceeding three years in order to maintain the priority of an applicant while the necessary surveys are being made, plans prepared, and financial arrangements effected (S. 5, 32:19). Before the permit expires the applicant must present complete maps, plans, specifications, and cost of estimates of the project (S. 9 (a), 35:1), and evidence that he has complied fully with the laws of the State in which the project is situated (S. 9 (b), 35:8; S. 27, 55:1). Licenses will be issued only on the condition "that the project

adopted * * * shall be such as, in the judgment of the commission, will be best adapted to a comprehensive scheme of improvement and utilization for the purposes of navigation, of water-power development, and of other beneficial public uses; and, if necessary, in order to secure such scheme, the commission shall have authority to require the modification of any project and of the plans and specifications of the project works before approval." (S. 10 (a), 35:20.) To determine all matters bearing upon the application the commission may hold hearings, summon witnesses, and order testimony to be taken and documentary evidence submitted. (S. 4 (g), 31:16.)

The commission also is granted authority in interstate projects, and, in absence of State regulations in intrastate projects, to pass upon the securities which the licensee proposes to issue. (S. 19, 47:25; S. 20, 49:3.)

CONTROL OVER CONSTRUCTION OF PROJECT WORKS.

The licenses issued will prescribe the time within which construction must be started and completed and the rate at which it must be prosecuted. (S. 13, 41:7.) If the entire project is not immediately constructed, the licensee "shall from time to time thereafter construct such portions of the balance of such development as the commission may direct, so as to supply adequately the reasonable market demands until such development shall have been completed." (S. 13, 41:14.)

If the licensee does not commence construction of the project works or of any specified part within the time prescribed, his license may be canceled in whole or in part upon written order of the commission. (S. 13, 41:20.) If the licensee fails to complete construction the commission may bring suit, through the Attorney General, "for the revocation of said license, the sale of the project works constructed, and such other equitable relief as the case may demand." (S. 13, 42:9.)

When navigable rivers are involved the licensee may be required to "construct in whole or in part, without expense to the United States," any structures needed for navigation purposes (S. 11 (a), 39:23); or, if such structures are not made a part of the original construction, to furnish free of cost such land, rights of way, and other facilities as may be required by the United States in building such structures itself (S. 11 (b), 40:5.)

The licensee is made solely liable for all damages that may be caused in the performance of the construction work. (S. 10 (c), 36:22.)

The commission is granted authority to take all steps necessary to determine accurately the cost of all construction work. (S. 4 (f), 31:3.)

CONTROL OVER MAINTENANCE AND OPERATION OF PROJECT WORKS.

Licensees are required to operate their project works in such manner as not to interfere with navigation, and to comply with the regulations of the commission "for the protection of life, health, and property." (S. 10 (c), 36:18.) Licensees must "maintain the project works in a condition of repair adequate for the purposes of navigation and for the efficient operation of said works in the development and transmission of power, shall make all necessary renewals and replacements," and "shall maintain adequate depreciation reserves for such purposes." (S. 10 (c), 36:13.) An adequate depreciation of reserve is one which will make provision for the replacement of every item of structure and of equipment when the useful life of such item shall have expired. Such a reserve, therefore, represents at any time the difference between the original cost of the project works and their value at such time. The regulations of the commission will fix the amount of such reserves and will prescribe the manner in which they shall be employed in making replacements of worn-out or of obsolete equipment or structures.

Licensees are required to construct and maintain such fishways as may be prescribed by the Secretary of Commerce (S. 18, 47:3), to conform, in the operation of any navigation facilities, to "such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure as may be made from time to time by the Secretary of War," and "such rules and regulations may include the maintenance and operation by such licensee at its own expense of such lights and signals as may be directed by the Secretary of War." (S. 18, 46:21.)

CONTROL OVER BUSINESS OPERATIONS.

The commission is authorized "to prescribe rules and regulations for the establishment of a system of accounts and for the maintenance thereof by licensees hereunder; to examine all books and accounts of such licensees at any time; to require them to submit at such time or times as the commission may require statements and reports, including full information as to assets and liabilities, capitalization, cost of project, cost of operation, and the production, transmission, use, and sale of

power; and to make adequate provision for currently determining said costs." (S. 4 (f), 30:21.) Statements and reports must be made under oath, and any person making a false statement or report, or a false entry in the books or accounts of a licensee, is subject to fine and imprisonment. (S. 4 (f), 31:7.)

Provision is made for complete public regulation of rates, service, and the issuance of securities. Such regulation will be by the State commissions wherever they exist (S. 19, 47:9; S. 20, 48:21); but wherever there is any lack of State authority in any respect, whether the business is interstate or intrastate, the Federal commission is given jurisdiction (S. 19, 48:2; S. 20, 49:4).

The bill provides that in any rate-fixing proceeding before a State commission, the licensee shall not claim, and in any such proceeding before the Federal commission the commission shall not allow, any values in excess of the "net investment" of the licensee in the project (S. 20, 49:20); that is, nothing can be claimed or allowed in any case in excess of the "actual legitimate original cost" (S. 3, 26:21), and in many cases it may be considerably less (S. 3, 27:1). Nothing will be allowed for "unearned increment" in lands or similar property, or for any intangible elements of value. (S. 14, 43:13.)

With this basis for rate making established, and with the system of accounting prescribed by the bill (S. 4 (f), 30:21), the books of the licensee will show at all times the "rate base," the amount upon which rates may be earned. It will not be necessary to go through the involved, long-drawn-out, and expensive procedure ordinarily required in rate making. The basis provided in the bill is the one toward which the most advanced of State regulating bodies have been working, but which it is not yet possible fully to reach under any State legislation.

The licensees are required to "pay to the United States reasonable annual charges in an amount to be fixed by the commission" (S. 10 (e), 37:20), and where the license involved "dams or other structures owned by the United States * * * the charges * * * may be readjusted at periods of not less than 10 years" (S. 10 (e), 37:23). Furthermore, each license will name a "specified rate of return," and out of any earnings in excess of such rate the licensee is required to "establish and maintain amortization reserves," such reserves to be applied either to the reduction of the capital account during the period of the license or to the reduction of the amount which the licensee may receive for the property at the termination of the license (S. 10 (d), 37:5). Any surplus earnings not devoted to such reserves may be distributed among the customers of the licensee upon order of the commission. (S. 10 (d), 37:14.) These provisions, together with the powers to fix rates, make it impossible for a licensee to earn more than a reasonable return on the actual money invested. The two together form one of the most effective methods of rate regulation ever written into legislation.

Under the provisions of the bill "combination, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy of service" are prohibited (S. 10 (h), 39:10); and all "contracts for the sale and delivery of power for periods extending beyond the date of termination of the license" must receive "the joint approval of the commission and of the public-service commission * * * in the State in which the sale or delivery of power is made (S. 22, 50:12).

SPECIAL REQUIREMENTS.

No license may be voluntarily transferred without the written approval of the commission, and any successor or assign, whether by voluntary transfer or otherwise, is subject to all the conditions of the license and of the law as though an original licensee. (S. 8, 34:13.)

If any licensee is directly benefited by the construction by another licensee, or by the United States, of a storage reservoir or other headwater improvement he may be required to share in the annual costs of interest, maintenance, and operation on such improvement. Any amounts so paid to a licensee must be placed in an amortization reserve to be used to retire the capital charge against the improvement. Any payments made to the United States are to go into a special headwaters improvement fund. (S. 10 (f), 38:14.)

PENALTIES.

Penalties of fine or imprisonment, or both, are provided for falsification of reports, records, or accounts (S. 4 (f), 31:14), for willful failure to comply with any provisions of the act or of the license, with a subpoena of the commission, or with any lawful order or regulation of the commission, or of the Secretary of War (S. 25, 53:3). The license may be canceled in whole or in part on order of the commission if there is failure to begin construction within the time specified (S. 13, 41:20), and may

be forfeited by judicial proceedings if there is failure to complete construction or to operate the plant (S. 13, 42:2), or to comply with the requirements of the license (S. 26, 53:19). If a license is revoked by judicial process "the court is empowered to sell the whole or any part of the project or projects under license, to wind up the business of such licensee conducted in connection with such project or projects, to distribute the proceeds to the parties entitled to the same, and to make and enforce such further orders and decrees as equity and justice may require." (S. 26, 54:10.)

PUBLIC PURCHASE OF DEVELOPED PROJECTS.

Sections 14 and 15 contain what is known as the "recapture provisions of the bill." Under the provisions of these sections the United States or any State or municipality may acquire the properties of any licensee either during the period of the license or at its termination. During the period of the license the properties may be acquired by condemnation proceedings upon the payment of "just compensation"—that is, what the properties are actually worth at the time of acquisition. (S. 14, 43:21.) If the properties are acquired at the end of the license period, the United States, the State, or the municipality has the option of proceeding in condemnation and paying "just compensation," or of proceeding under the special provisions of sections 14 and 15 and paying the "net investment," an amount which under no circumstances can exceed the "actual legitimate original cost" (S. 3, 26:21) of the properties. Hence, under the most unfavorable interpretation, from the public standpoint, that can be placed upon the term "net investment," the United States, the State, or the municipality can, if the properties are worth less than cost, acquire them by condemnation for what they are actually worth, and if they are worth more than cost, acquire them under the provisions of sections 14 and 15 for what they actually cost.

In all but exceptional cases, however, the "net investment" at the end of the license period will be not only less than the value of the property but also less than its cost. Any reasonable exercise of the power of rate regulation will allow a licensee to earn operating expenses, including an adequate allowance for depreciation reserves and a fair return on the money actually invested. As stated previously, these reserves should be sufficient to equal at all times the difference between the actual cost and the then value of the structures and equipment. If a "fair return" is allowed by public rate regulating agencies, these depreciation reserves are deducted from the original cost to determine the "net investment" and thus make the purchase price for the properties much less than their actual cost. (S. 3, 27:5.)

Public regulating bodies do not fix a rate of return and then allow service charges to vary so as to yield such a rate, but they fix the service charges themselves on the assumption that they will yield approximately a certain rate of return. In practice such service charges may yield more or less than the assumed rate of return. If variation from the assumed rate is found to be too great, the service charges are readjusted. Moreover, if two concerns with different costs of product are delivering power in the same market, different rates can not be fixed for the same service, and a service charge which may yield only a fair return to the high-cost producer may yield an unreasonably high return to the low-cost producer. This situation has never been adequately met under the limitations of State legislation, where the authority to act is based upon the police powers of the State and not upon a contract relation such as is involved in a Federal license. This situation is met in the House bill by the provisions of subsection (d) of section 10 (37:5), under which such proportion as the commission may determine of earnings in excess of a specified rate of return shall be paid into an amortization reserve and will be deducted from the original cost in order to determine the price to be paid at time of "recapture." (See also S. 3, 27:6.)

Finally, any unappropriated surplus and any amounts that may have been expended out of surplus or of income in excess of a fair return on the actual money invested will also be deducted from the price to be paid. (S. 3, 27:5:8.) Under reasonable rate regulation, therefore, the "net investment" at the end of the license period will not be greater than the original cost less depreciation of the structures, and in those cases where the rates as fixed have yielded more than a fair return will be still further reduced by the amount of amortization reserves, etc. With the option, as provided in the bill, of purchasing for actual value, if in any particular case the "net investment" should happen to be greater than such value, the public can not lose in any case under the provisions of the House bill.

O. C. MERRILL, Chief Engineer.

My Record of Patriotic Services in and Out of Congress.

EXTENSION OF REMARKS

OF

HON. WALTER M. CHANDLER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 12, 1918.

Mr. CHANDLER of New York. Mr. Speaker, having heretofore secured unanimous consent to place in the Record a résumé of my patriotic services both in and out of Congress, I wish at this time to avail myself of the privilege thus courteously granted me by the House.

I am a candidate for reelection to Congress from the nineteenth congressional district of New York. I represent a brave and intelligent, a proud and patriotic people, who love their country with passionate devotion, and are ready at all times to make supreme sacrifices for the glory of the flag and for the honor and the safety of the Nation. A proper respect for the personal and political opinions of the members of such a constituency demands that I give a satisfactory accounting of my stewardship as a patriotic Congressman during the last two years before asking for another vote of confidence and before seeking a renewal of the legislative commission that I now hold.

My constituents are generous and magnanimous and are not prone to quick resentment. But, being loyal and patriotic themselves to the highest degree they expect and demand the highest degree of loyalty and patriotism in the private and public conduct of their Representative at Washington. Nothing less than the finest patriotism manifesting itself in the most loyal and energetic support of the Government in the successful prosecution of the world war in which we are now engaged will satisfy the patriotic citizens of the congressional district in New York in which are located Columbia University and the tomb of Grant. A sense of public duty, born of these considerations, as well as feelings of personal gratitude for honors that have been conferred upon me, prompt me at this time to prepare to render an accounting to the voters of my district before asking again for their support and suffrage at the coming election.

No mere pride of personal achievements or sentiments of personal vanity could have induced me to ask to be permitted to use the CONGRESSIONAL RECORD to describe my patriotic services in and out of Congress. The character of my public conduct in the past is the very best evidence of what my public conduct in the future will be, and in the stupendous world crisis that now confronts us my constituents are entitled to know not only what I have done but what I propose to do as a Representative in Congress in the matter of winning the great struggle for liberty, humanity, and civilization.

I shall outline my patriotic services while a Member of Congress in enumerated subdivisions, as follows:

(1) NATIONAL PREPAREDNESS.

From the very beginning of my congressional career I was an ardent advocate of strong national preparedness, and I have voted for every amendment to every administration bill providing for a still larger Army and a still stronger Navy than was at first proposed by the bill when it came from committee.

I voted for the Kahn amendment to the Hay bill providing for a Regular Army of 220,000 men. This amendment was defeated. I then voted for the Hay bill under protest as insufficient but as a short step in the right direction.

I voted for the Chamberlain or Senate amendment to the Hay bill providing for a Regular Army of 250,000 men. This amendment was rejected. I then voted for the conference report providing for approximately 206,000 men in the Regular Army. This report was adopted.

I voted for the Roberts amendment to the naval appropriation bill appropriating \$3,500,000, instead of \$2,000,000 as originally proposed, for aviation purposes. This amendment was adopted.

I voted for the Roberts amendment to the naval appropriation bill providing for 50 instead of 20 submarines. This amendment was adopted.

I then voted for the Browning motion to recommit the naval appropriation bill with instructions to report the same back to the House with certain amendments that would have increased the appropriations for naval defense by \$55,000,000. This motion was defeated by a very few votes. I then voted for the administration's naval appropriation bill under protest and as a short step in the right direction.

On August 15, 1916, I delivered a speech in the House of Representatives on the subject of national preparedness, in which I proclaimed my preparedness creed in the following language:

I believe that a Republic of 100,000,000 people, with several thousand miles of coast line to protect, with important insular possessions to defend, with the Panama Canal to fortify and guard, and with the Monroe doctrine to maintain, should have a standing army of at least 250,000 men, with adequate militia and volunteer reserves, and with all the auxiliaries and equipments of modern warfare, together with a navy at least second among the navies of the world. This is my preparedness creed.

These votes on and advocacy of strong national preparedness preceded the beginning of our war with Germany.

(2) DECLARATIONS OF WAR AGAINST GERMANY AND AUSTRIA-HUNGARY.

I voted for the declaration of war against the Imperial German Government and subsequently against the Imperial Austro-Hungarian Government.

(3) VOTES IN CONGRESS SUBSEQUENT TO THE DECLARATION OF WAR.

I have voted since the beginning of the war against Germany and Austria for every important administration measure proposed for the successful prosecution of the war. These measures included both the first and second selective-draft acts or conscription bills. The New York Times in a recent editorial stated that I voted against conscription. I did not. The CONGRESSIONAL RECORD, page 1557, shows that on April 28, 1917, I voted for the first conscription or selective-draft bill. The RECORD, page 9506, also shows that on August 24, 1918, I also voted for the second conscription or selective-draft bill.

The only administration measures that I have voted against since war began were certain revenue bills that I believed were unfair and unjust to the people of my district and to the people of the State that I have the honor in part to represent. New York is big and rich and is willing and eager to bear her full share of the gigantic burden of conducting the world war, but she should not be singled out, as has been done in several revenue measures, for inequitable and unjust taxation simply because she is big and rich and patriotic. She should not be "bled white" while other States and sections of the Union escape their proportionate share of Federal war taxes.

(4) THE PATRIOTIC SERVICE LEAGUE OF THE NINETEENTH CONGRESSIONAL DISTRICT OF NEW YORK.

My patriotic services heretofore referred to related to votes and speeches in Congress. I come now to speak of patriotic services rendered out of Congress.

I helped to organize and to finance, immediately after the declaration of war with Germany, a patriotic service league, called "The Patriotic Service League of the Nineteenth Congressional District." The main purposes of this league were and are to promote patriotic sentiment among the people of the district; to support the Government loyally in the conduct of the war; to aid Red Cross work and to help in the sale of liberty bonds; and, lastly, to aid and comfort the families of men slain or wounded on the battle fields of Europe.

This league has branches in all the election districts of my congressional district, is still active, and performs grandly and nobly the beneficent work for which it was organized. As far as I know, no other congressional district in the United States has an organization like this one.

(5) DISTRIBUTION OF PATRIOTIC LITERATURE.

In cooperation with the National Security League, I caused to be sent out under my frank to all the registered voters of Greater New York some 575,000 Red, White, and Blue Books, entitled "How the War Came to America," issued by the Committee on Public Information. These books were sent out to enlighten the people completely as to the just and righteous causes of our war with Germany and to enlist their active sympathy with and support of the Government in the conduct of the war.

(6) DISTRIBUTION OF PATRIOTIC SPEECHES.

I sent out to the people of my district 40,000 copies of my speech entitled "Plea for the new liberty loan." This speech was printed at my personal expense and was circulated in aid of the sale of liberty bonds.

(7) PATRIOTIC LETTER TO 700,000 PEOPLE OF THE STATE OF NEW YORK.

In cooperation with the Committee on Public Information, I caused to be sent out to 700,000 people of the State of New York a patriotic letter, of which the following is a copy:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., February 20, 1918.

MY DEAR SIR: I am inclosing herewith a printed leaflet and a franked Government postal card, which will speak for themselves. Please read very carefully the leaflet from beginning to end if you wish to order any of the publications. Pay particular attention to the directions on

the front of the postal card. Put an X in square opposite titles desired. Do not send the card to me. Simply drop it in the post office without stamping. Being a franked Government postal card, no stamp is necessary. Only two of these pamphlets will be sent free. If you wish the ones entitled "The Battle Line of Democracy" and "The National Service Handbook" you can secure them in addition to the other two by sending 15 cents each to cover the cost of printing.

As a Member of Congress from the State of New York, I feel it to be my duty to make it possible for every citizen of the State that I have the honor in part to represent to secure these booklets. A sacred and solemn obligation rests upon each and every one of us to support the Government loyally in the prosecution of the world war in which we are now engaged. The reason for America's entrance into the European conflict is made perfectly clear by the Government publications which I am now enabling you to secure.

With kind regards and all good wishes, I am,

Faithfully yours,

WALTER M. CHANDLER.

(8) CHARITABLE CONTRIBUTIONS.

Since the war began I have contributed, whenever requested to do so, and as liberally as my means justified, to all the war charities of my district—Protestant, Catholic, and Jewish.

(9) LIBERTY LOAN INVESTMENTS.

As a matter of patriotic duty, as well as from motives of personal interest, I have invested approximately 60 per cent of all the wealth that I have in the world in liberty bonds.

(10) PATRIOTIC SPEECHES DELIVERED.

Under the auspices and by the appointment of the National Security League, I made more than a dozen patriotic speeches at rallies in the leading cities of New York State just preceding the last liberty loan drive.

In addition to appointments made by the National Security League, I delivered some 20 addresses at other times in several States in behalf of liberty bond sales and Red Cross work.

I respectfully submit this record of patriotic service to the Congress and to my constituents. I do it without boasting, for it was as little as I could have done for my country. Indeed, I should have done more, and if opportunity had presented I would have done more. Nevertheless, without the remotest intention of being immodest or boastful, I make bold to say that this record of patriotic service has been surpassed by few Members of Congress, if indeed it has been excelled by any.

The only severe criticism that I have ever had passed upon my public conduct was in the matter of my vote upon the McLeMore resolution, which was offered and voted upon on March 7, 1916, more than a year before the declaration of war against Germany. A majority of the Republicans in the House, 101 in number, including Republican Leader MANN, LENROOT, of Wisconsin, who has been since elected to the United States Senate, former Speaker CANNON, and JULIUS KAHN, of California, champion of preparedness and pilot of the draft bill through the House, voted for it. Thirty-three Democrats, among them the ablest in the House, men like Fitzgerald, of New York, chairman of the Appropriations Committee, and PAT HARRISON, of Mississippi, who defeated VARDAMAN, voted for it. Six Progressives out of seven in the House voted for it. It was in no sense a partisan question, and, under the true aspects of the case, a vote upon the measure did not remotely involve and can not now be made to involve the question of patriotism. Indeed, it was deliberately thrown into the political junk heap by the people themselves when they renominated and reelected to Congress in November, 1916, practically every man who had voted for the measure, and this after the McLeMore resolution had been made a direct issue in most districts by the political opponents of these men. It may be added that nine out of ten of these men are now again the nominees of their parties for Congress, and a large majority of them will doubtless again be triumphantly elected.

I respectfully submit that the people themselves are the best judges of what constitutes patriotism as well as the qualifications and fitness of public men for places of confidence and trust. The motives of the people are disinterested, except as they desire and advocate intelligent and patriotic service in government. Their minds are open and their hearts are big and generous and just. Several millions of the people returning to Congress men who are alleged to have committed an unpatriotic act are certainly much better judges of what constitutes patriotism than any small group of self-appointed egotists and hypocrites who, imitating the Pharisees, with a holier-than-thou look and attitude, assume to tell the balance of the country what patriotism is.

To me personally this question is now only academic and a matter of ancient history. It has become political res adjudicata in my district. In the campaign of 1916 the question was made a direct issue by my political opponents. By speeches and by circular matter it was sought to defeat me because of my vote on this question. I accepted the challenge, went before the people and explained the character of the measure and my

reasons for voting for it. The result was that I received a majority of 5,105 votes over my opponent, more than ten times the majority that I had received two years before. My constituents either regarded the question as unimportant, overlooked it, condoned it, or actually approved it. I do not know which. I only know that my majority was not diminished but was multiplied tenfold. If my political opponents should be so foolish as to seek to revive a dead issue, as far as I am concerned, they are at liberty to do so. But I warn them against the punishment in store for those who abuse the patience and insult the intelligence of the people by using as exhibits in political campaigns skeletons from political graveyards.

I have appreciated keenly at all times the great honor conferred upon me by the people of my district when they elected me to Congress. I have endeavored diligently at all times to show this appreciation by energetic and patriotic service. I shall continue to strive earnestly to be worthy of the great honor conferred.

The times in which we live are marked by colossal events that will be followed by stupendous and far-reaching consequences. The map of the earth will be very soon materially and permanently changed. Thrones will totter and fall and crowns will crumble. Civilization will experience new developments and assume new phases. If Germany wins, imperialism and absolutism will win and reign upon the earth; if the allies win, freedom will win and the Declaration of Independence will be the chart of the nations for all time to come.

Upon the battle fields of Europe the hosts of freedom are arrayed in solid masses against the hordes of monarchy. There will be no concession or compromise. The great struggle will be fought to a finish and the results will be definite and final. Freedom will win, despots and tyrants will vanish, and the theory of the divine right of kings will be displaced forever by the doctrine of the majesty and sovereignty of the people of the earth. Never again, in my humble judgment, will a few men gathered in Bundesrath or Star Chamber be permitted to imperil the lives and fortunes of the whole human race. This experience is the bitterest and the most awful that mankind has known. The youngest and best and bravest of 20 nations have been offered as a bloody sacrifice to the criminal ambitions of two royal houses of Europe. The possibility of the repetition of this experience is a thing not to be conceived, unless mankind is to abandon reason, repudiate all the teachings and tenets of pure religion and sane philosophy, and relapse permanently into savage and barbaric night.

There must be an awful reckoning with tyrants and despots, and the time for reckoning is now. There must be no aftermath except the absolute triumph of freedom and the permanent establishment upon the earth of the inalienable rights of man. To allow a vestige of Prussian militarism and autocracy to remain would be to mock the manes of all the slaughtered dead of every battle field of Europe. To allow monarchy to dictate even one term of peace would be to slander the lives and insult the memories of Washington and Lincoln and of all the martyred dead of every race and time who made willing and heroic sacrifices of their lives for the freedom of mankind.

To America, the mother of republics, the protagonist of republican virtue in the world, has been given, as if by divine commission, the glorious privilege and task of vindicating on the field of battle the justice and sanctity of her origin and mission among the nations of the earth. Since the foundation of our Government some 20 republics have been founded in the world, all modeled after our Republic. We have thus created institutions of freedom by peaceful example. Our present task is to banish monarchy and destroy despotism forever by force of arms.

How gloriously we are doing this, together with our allies, is told us every day by telegraphic dispatches from the battle fields of France. Our brave boys, great strong-limbed, ruddy-faced youths in khaki, are surpassing all our expectations and are filling our minds and hearts with unbounded pride and joy and exultation. Their heroic deeds are shaking the very thrones of Europe's tyrant kings and are filling their souls with terror and despair. They have met face to face in battle the proud Prussian Guards, the boasted invincibles of the Kaiser, and in terrific hand to hand combat have conquered and destroyed them. They have taught the military despots of Germany that an ounce of freedom in the heart is worth a ton of discipline in the ranks of tyranny. They have taught all the European critics of America who have called us merchants and peddlers and pawnbrokers that we are not only fond of money making but that when freedom calls we derive exceeding great joy from the deafening roar of cannon and from the fierce rapture of a bayonet charge. They have wept and broken rules of discipline when

refused immediate opportunity to lead the van and mingle in the awful mêlée, and when finally summoned to the field of battle they have sent to generations yet unborn and to all the centuries yet to come a message of sublime decision and deathless valor.

The grand achievements of our soldiers at the battle front in France are worthy of all our past and are prophetic of our future. And when the historian of the great war describes the mighty conflict and pays fitting tribute to each of the splendid nations that have waged it, he will say: "The Americans were among the best and bravest and grandest of them all; American Cavalry illustrated superbly the dashing chivalry of mankind; American Infantry drove bayonets through columns that never before yielded to the shock of carnage; American Artillery sent unanswered anthems to the god of battles."

Permit me, in closing, my colleagues and my countrymen, to say that our own duty to our great country and to our noble Army in France imposes upon us many serious and solemn obligations. It is not enough that we watch with pride and satisfaction from afar the heroic conduct of our brave men abroad. We must help and sustain them mightily by every means in our power. We must let them know that a grateful and loving Republic is at their back; that our sympathy and affection and admiration, as well as our money, are all theirs; and that their comrades, exultant and militant, are following them by the hundreds of thousands each month to the trenches of France. Let us help them to feel that they are the makers of history, and that the eyes of all future generations are upon them.

Upon us as Members of this House, my colleagues, rests a mighty responsibility, a sacred and a solemn obligation. The preparation of the material, the devising of the ways and means of winning the war surely and speedily is peculiarly within our hands. Let us not be remotely recreant to the great trust. In the execution of this trust let us be patriots always and partisans never. Let us sustain cheerfully and fully the President of the Republic, as the constitutional head of the Army and the Navy, in all just and reasonable demands. Let us remember that this is not a Democratic war, not a Republican war; that it is an American war for the vindication of American rights and for the permanent establishment of freedom upon the earth. And, as a matter of keen personal selfish interest, let us not forget that the people will visit with merciless wrath at the polls in November any man who seeks to derive partisan advantage at the expense of the welfare of his country.

A supreme determination to win this war, and to win it quickly, should animate all our purposes and inspire all our deliberations. There should be no limit to the force that we employ to win the war, and win it quickly. We have declared war against the Imperial German Government and likewise against the Imperial Austro-Hungarian Government. We have a registered man power at the beginning of this day of 10,000,000 of men. We have a possible man power of 20,000,000 of men. We have a conservatively estimated national wealth of \$230,000,000,000. And before I will consent that the flag of this Republic shall be hauled down in dishonor and disgrace, before I will consent that the brave boys that we have sent to the trenches of Europe shall be ordered back in humiliation and in shame, I will vote to send every man of the 20,000,000 to the field and to cast every dollar of the \$230,000,000,000 into the scales.

My friends and my countrymen, the war that we have declared is the most just and righteous in the history of the world. The dearest rights and the most sacred meaning of liberty, humanity, and civilization are at stake. Let us see to it that America plays a sovereign and illustrious rôle in the great concert of the nations. Let there be no division in our own ranks. Let every brain think and every heart beat for America and her allies. Let this be the prayer to ascend to Heaven each day from every patriot lip:

Great God, who rules the destinies of nations, who sees at once the fall of a sparrow and the flight of worlds, preserve forever to us and to our posterity, and to all mankind, the country of Washington, the Republic of Jefferson, and the Union of Abraham Lincoln.

Go with our brave boys, O God, into the trenches of Europe and guide and protect them with Thy loving care. Fill their minds with patriotism, their hearts with heroic courage, and their souls with pious love for Thee.

Crown their standards with victory, O God, and if it please Thee return them in health and happiness to their country and their countrymen, where their names shall be inscribed forever in the annals of the Republic as the veterans of an Army that crossed the high seas to unite with the free armies of other free peoples that liberty, humanity, and civilization might endure forever upon the earth! We beseech Thee, O God!

The War and Politics—What Things Help and What Things Hurt.

EXTENSION OF REMARKS
OF
HON. DUDLEY DOOLITTLE,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September, 25, 1818.

Mr. DOOLITTLE. Mr. Speaker, many things have been said and written from time to time about the war and its causes. When war was declared there was yet in the minds of some of our people a hazy idea as to some of the facts and aspects. Much of what I am going to say is repetition, some of it may give more light on matters still not entirely understood.

STATUS OF SHIPS AT SEA.

In the first place let us note the status of all ships, merchant and passenger, at sea, whether armed for defense or not. *The high-seas—that is, the ocean outside a limit 3 miles from land—is the common property of all people. Each and every individual person has an absolute property right in it, and can go when and where he pleases so long as he is on a legal mission. No person and no government has the right to order you off the seas any more than he has to order you off your own front porch.*

THE LAW OF BLOCKADE.

In war time one of the weapons of belligerents is the blockade of the enemy's ports. This is an acknowledged legal method of warfare. *But the blockade must be maintained according to law, and persons attempting to run the blockade do so subject to seizure. It means that the blockade must be actual, and that it must be maintained by physical power. A paper blockade, that is, a notification to keep out of certain portions of the ocean, is not a legal blockade unless it is maintained by ships. It is no more a blockade than is the statement of a sheriff that he levies an attachment or execution on personal property without taking it into his actual possession, a levy. Both can be ignored according to all law with impunity. And when a vessel attempts to run a blockade, the blockading warship must warn her to stop, and then make a search of her cargo to ascertain if it contains contraband, which is subject to seizure, or noncontraband, which is not subject to seizure, and whether there are passengers aboard and of what nationality. If the ship attempts to escape or resist capture she may be legally sunk.*

Briefly, I have stated the law of blockade that was recognized by all countries, including Germany, up to the breaking out of the world war in 1914. I here give the general orders of the German Admiralty Staff dated June 22, 1914, for dealing with even enemy merchant vessels, and if that was the case, how much more consideration should be given to neutrals:

If an armed merchant vessel of the enemy offers armed resistance, such resistance may be overcome with all means possible. The crew are to be taken prisoners of war. The passengers are to be left to go free unless it appears that they participated in the resistance.

Before proceeding to the destruction of the (neutral) vessel (which has been seized for proper reason), the safety of all persons on board and, so far as possible, their effects, is to be provided for.

The enemy merchant ship has the right of defense against enemy attack, and this right it can exercise against "visit" (i. e., being stopped and investigated), for this indeed is the first act of capture. The attacked merchant ship can indeed seize the overpowered warship as a prize.

INTERNATIONAL LAW BETWEEN NATIONS CAN NOT BE ALTERED TO SUIT THE CONVENIENCE OR NECESSITY OF ONE NATION WITHOUT MUTUAL CONSENT. A country going into war takes the law as it stands, the same as a litigant going into court takes the law as he finds it, and can not change it during the trial of his case.

THE CIVIL WAR BLOCKADE.

During the Civil War the Union blockaded the southern ports, and they maintained that blockade strictly according to law. Hundreds of attempts to run the blockade were made, some of which were successful, but a majority of the ships that attempted the hazardous task were captured, and from all those ships not one human being was killed either aboard the blockade runner or the blockading fleet. Further, when the Confederate privateer, the *Alabama*, was making her daring raids upon Union shipping, capturing, as she did, vessels and merchandise valued at more than \$100,000,000, in all those seizures and attempted seizures not one human being was killed either aboard the *Alabama* or the vessels attacked until the final and fatal battle between the *Alabama* and the *Kearsarge*. Not only that, but in one instance the *Alabama* captured a Union ship and landed the crew and passengers at a foreign port where there was an epidemic of smallpox raging. As soon as Capt.

Semmes, of the *Alabama*, heard this he took the crew and passengers on board again and finally turned them free rather than expose them to this contagious disease.

I mention these matters in passing, Mr. Speaker, to show what a legal blockade is and that it can be carried out efficiently and effectively and still be legal and humane.

GERMANY'S "BLOCKADE."

But what has been Germany's course? I shall give only a partial list of submarine outrages and stages in the U-boat campaign:

February 4, 1915: German Government proclaims a war zone within which any ship may be sunk unwarned.

February 10, 1915: Mr. Wilson tells German Government it will be held to "strict accountability" if any American rights were violated in this way.

April 22, 1915: German Embassy publishes in New York papers warning against taking passage on ships which our Government had told their people they had a perfect right to take.

May 7, 1915: Sinking of *Lusitania*.

May 13, 1915: Mr. Wilson's first *Lusitania* note.

May 28, 1915: Germany's reply defending the sinking of the *Lusitania*.

June 9, 1915: Mr. Wilson's second *Lusitania* note.

July 21, 1915: Mr. Wilson's third *Lusitania* note (following more unsatisfactory German rejoinders).

August 19, 1915: Sinking of the *Arabic*, whereupon Von Bernstorff gave an oral pledge for his Government that hereafter German submarines would not sink "liners" without warning.

February, 1916 (after still more debatable sinkings): Germany makes proposals looking toward "assuming liability" for the *Lusitania* victims, but the whole case is soon complicated again by the "armed-ship" issue.

March 24, 1916: Sinking of the *Sussex*, passenger vessel with Americans on board.

April 10, 1916: Germany cynically tells United States she can not be sure whether she sunk the *Sussex* or not, although admitting one of her submarines was active close to the place of disaster.

April 18, 1916: President Wilson threatens Germany with breach of diplomatic relations if *Sussex* and similar incidents are repeated.

May 4, 1916: GERMANY GRUDGINGLY MAKES THE PROMISE THAT SHIPS WILL NOT BE SUNK WITHOUT WARNING. (*Sussex* pledge.)

October 8, 1916: German submarine appears off American coast and sinks British passenger steamer *Stephano*, with many American passengers (vacationists returning from Newfoundland) on board. Loss of life almost certain had not American men-of-war been on hand to pick up the refugees.

(From this time until final break several other vessels were sunk under circumstances which made it at least doubtful whether Germany was living up to her pledges.)

January 31, 1917: GERMANY TEARS UP HER "SUSSEX" PLEDGE AND NOTIFIES MR. WILSON SHE WILL BEGIN "UNRESTRICTED SUBMARINE WAR."

February 3, 1917: Mr. Wilson gives Count Bernstorff his passports and recalls Ambassador Gerard from Berlin.

In all modern history it may be doubted if there is another chapter displaying such prolonged patience, forbearance, and conciliatoriness as that shown by Mr. Wilson and Mr. Lansing in the face of a long course of deliberate evasion and prevarication to them personally, as well as outrage upon the property, and, still more, upon the lives of American citizens.

AMERICAN SHIPS SUNK.

And how many American ships were sent to the bottom before we declared war? *Nineteen*, and their names, with the number of Americans in each case aboard, 125 all told, as follows:

Armenian, with 23 Americans; *Iberian*, with 3 Americans; *Anglo-Californian*, with 2 Americans; *Hesperian*, with 1 American; *Arabic*, with 3 Americans; *Persia*, with 2 Americans; *Ancona*, with 7 Americans; *Englishman*, with 6 Americans; *Sabota*, with 1 American; *Marina*, with 8 Americans; *Russian*, with 17 Americans; *Eveston*, with 1 American; *Vedamore*, with 10 Americans; *Turino*, with 1 American; *Athos*, with 1 American; *Lacona*, with 8 Americans; *Sjostad*, with 1 American; *Vigilancia*, with 5 Americans; *Haldton*, with 7 Americans; and the *Crispin*, with 19 Americans. To this number of Americans killed should be added the 121 murdered on non-American ships.

GERMANY'S ACTS OF VIOLENCE IN UNITED STATES.

And what acts of violence were committed in our country by direction of the German Government? ONE HUNDRED AND ONE OF THEM, and I shall name a few, together with intrigues that

the German ambassador, Bernstorff, set under way, afterwards directly traced to him.

1915.

The first of the blows delivered against American commerce, at least in this country, was on January 18, 1915, when the plant of the Roebbing Chain Co., at Trenton, N. J., was blown up by a bomb, the buildings afterwards burning. The loss was \$1,500,000. On January 29, the steamship *Preston*, with a cargo of cotton, was partly burned while en route to England.

The Du Pont Powder Co. mill, at Haskell, N. J., was blown up on February 13, when one man was hurt, and again on March 6, when five were killed.

The *Clan MacKeller* and the *San Guglielmo*, both cotton-laden from the United States, put into Genoa on the 21st and 31st of March, respectively, with fires believed to have been set by bombs. On April 22, the *Devon City*; on April 29, the *Erne*, and on May 8, the *Banksdale*, all laden with sugar for Havre, were found, on arrival there, to have been fired by bombs or to have bombs in their cargo. These all went from the United States.

Two powder-plant explosions occurred in April and two in May, one on April 1 at the Equitable plant in Alton, Ill., where five were killed; another on the last day of April at Carneys Point plant of the Du Pont Co.; the third at Anderson's guncotton storehouse, Wallington, N. J., where three were killed on May 12; and three days later the fourth occurred, again at Carneys Point.

On June 10 the steamship *Kirkoswold*, from New York, was found to have nine bombs in her hold when she was unloaded at Marseille, and on June 26 the Du Pont mill at Wayne, N. J., was blown up.

July saw the start of the real carnival of explosives and two powder plants wrecked. On the 4th the steamship *Minnehaha* was fired at sea by bombs placed on board the ship at New York; on the 13th the United Safety Mill at Jefferson Town, Ky., was destroyed, three being killed, and the Carneys Point plant of the Du Pont Co. was again blown up, one being killed; on the 24th the steamer *Cragside* was fired at her pier in New York, and on the 30th the steamer *Knitsford* was fired in Brooklyn.

August saw the quickening of plots against munition factories. On the 16th five men were killed when the *Aetna* mills at Simamahoning, Pa., were blown up, and on the 29th the Du Pont plant at Wilmington, Del., was blown up, with a loss of two lives, the American Glazing plant, at Acton, Pa., was blown up, an attempt to wreck a train carrying guncotton, at Gary, Ind., was frustrated, and the shrapnel plant of E. J. Codd Co., Baltimore, was damaged by fire. On the 31st the shell plant of the Malleable Iron Works, at St. Charles, Ill., was burned, a dynamite-laden train, at Pinole, Cal., was derailed and blown up, with a loss of three lives, and the door of the home of M. F. Coombs, Depew, N. Y., superintendent of a plant making aeroplanes, was blown in by a bomb.

On September 1 a train carrying 7,000 pounds of dynamite from the Du Pont plant at Pinole, Cal., to the seacoast was wrecked and two were killed. On the 4th a guncotton bomb was found in the Driggs-Seabury Ordnance plant, at Sharon, Pa.; on the 13th the steamship *San' Anna* of the Fabre Line put into the Azores afire as a result of a plot against the Italian reservists she carried; the steamship *Athinai* from Brooklyn, with food supplies for the allies, was burned at sea on the 18th; and the Haskell, N. J., Du Pont plant was blown up on the 29th with a loss of four killed.

In October the plotters seemed to hold back somewhat. On the 1st the Du Pont plant at Pompton, N. J., was blown up, with a loss of one life. On the 6th, 285,000 pounds of explosives at the Emporium, Pa., plant of the *Aetna* Powder Co., were exploded and four were killed and seven hurt. The Du Pont Pompton plant was again blown up on the 12th, seven being burned; and on the 28th warehouses at Seattle, Wash., filled with munitions for Russia were burned, with a loss of \$500,000.

In November there were many additions to the list of ships and munition plants set on fire or blown up, although no lives were lost. The British steamer *Euterpe*, with a cargo of sugar, was fired in Erie Basin, Brooklyn, on the 2d; and two days later the British steamer *Rio Lages*, also with a cargo of sugar, caught fire at sea from bombs. The French liner *Rochambeau*, with a cargo of war supplies, was afire at sea on the 7th.

The East Braintree bleacheries were burned on the 4th, with a loss of \$70,000. They were making guncotton for the allies. On the 9th the No. 4 machine shop of the Bethlehem Steel Co. was burned with 800 big guns, and a loss of over \$2,000,000. The same day the Eddystone plant of the Baldwin Locomotive Works, near Chester, Pa., making rifles, was burned, with a loss of \$40,000, and the next day the Roebbing steel-rope plant at Trenton, N. J., making wire for the allies, was destroyed by fire, entailing a loss of \$1,000,000; and the American Synthetic Color Co., at

Stamford, Conn., experimenting in making dyes from German processes, was burned, the loss being \$30,000.

On the 15th the Frary Spool Co., at Charlemont, Mass., which was making munitions for the allies, was completely burned out.

Providence, R. I., was visited by the plotters on the 16th, when a room at the Providence Warehouse Co. containing cotton for the Russian Government was burned.

The wheelhouses at the Equitable powder plant at East Alton, Ill., were blown up on the 23d, and the Toledo Machine & Tool Co., Toledo, Ohio, making machinery for the manufacture of munitions, was burned on the 24th. On the 26th the British steamer *Banksdale* arrived at Bordeaux with a cargo of horses and a tale of fire at sea caused by bombs.

The list of fires and explosions in December was not so long, but the death record was considerably increased. On the 1st the Wilmington (Del.) plant of the Du Pont Powder Co. was wrecked, with a loss of 31 lives. On the 4th the steamer *Tynninghame*, with a cargo of sugar, was fired in the Erie Basin, and on the 10th the powder town of Hopewell, Va., was wiped out by a \$30,000 fire. The same day cotton for the allies was burned at New York, and there was an explosion at the Bethlehem Steel Works in which one man was killed and 15 hurt. The steamer *Lord Ormondo* reached Bordeaux on the 19th with a fire set by bombs, and on the 27th the steamer *Inchmoor* was fired at New York.

With the dawn of 1916 the plotters introduced a carnival of death and destruction from the Atlantic to the Pacific. On New Year's Day there was an explosion in the New England Manufacturing Co. plant at North Woburn, Mass., and an unexploded bomb was found at the Massachusetts State Capitol. The next day the Norwegian oil tank steamer *Aztec* was blown up at Brooklyn, with a loss of 12 lives.

The Du Pont plant at Story, Ill., was blown up on the 6th, several being injured, and on the 9th the Carneys Point plant of the same company was again blown up, nine men being killed. Also on the 9th bombs were found on board the steamer *Shinyo Maru* off San Francisco and a mysterious fire was discovered at the new United States submarine base at New London.

January 11 the Wilmington, Del., plant of the Du Pont Co. was once more partially wrecked by an explosion, and on the 12th the American Powder Mill Co.'s factory at Acton, Mass., and the Du Pont plant at Newhall, Me., were blown up. Two more of the Du Pont factories—the Gibbstown, N. J., and Pompton shops—were wrecked the next day, one man being killed at the latter place. The *Aetna* Explosive Co.'s works at Huntington, Pa., were set on fire the 14th; the Carneys Point plant of the Du Pont Co. was again the scene of explosions on both the 24th and 27th; and a carload of powder was touched off in the yards of the Norfolk & Western Railroad at Bluefield, W. Va., on the 25th, 30 men being hurt. The Norwegian freight steamer *Sygnna* was damaged by fire at New York on the 21st.

After a week of February had passed without explosions or fires due to plotters, two fires were reported on the 9th, the Midvale Chemical plant at Elizabeth, N. J., and the factory of A. Ortmayer & Sons, saddlery makers, at Chicago, being destroyed with a loss of over \$200,000. The next day the Castner Electrolytic Alkali Co., at Niagara Falls, was blown up, and the powder house of the Bethlehem Steel Co. at Newcastle, Del., was destroyed by an explosion.

On the 13th the munition plant of the General Electric Co. at Schenectady was burned with a loss of \$6,000, and on the 14th the steamship *Dalton*, at Philadelphia, was damaged to the extent of \$150,000 by a fire.

The largest loss, up to this time, was reported on the 15th, when 3 steamships and 37 lighters were burned at Brooklyn with a property damage of \$3,000,000. The same day the Farist Steel shops at Bridgeport were swept by fire, the loss being \$45,000.

Four men were killed when the plant of the Semet-Solvay Co. at Syracuse was blown up on the 17th, and \$50,000 damage was reported when the Middlesex Aniline Chemical Co. at Plainfield, N. J., was wiped out by an explosion and fire on the 18th. On the 27th Hubbard & Co., shovel makers, of Pittsburgh, were burned out; the Woburn Chemical Co. at Woburn, Mass., was blown up; and the steamship *Eurymachos*, loaded with munitions, was damaged by fire at New York.

March saw a falling off in the fires and explosions. On the 1st the office of the Providence Journal was visited by an explosion and fire of incendiary origin. And permit me to state here that I am indebted to that patriotic publication for this data on explosions and fires. On the 6th the Niagara Electric Chemical Co. was blown up and burned, with loss of one life. The ruins were again blown up on the 8th. The property loss was \$200,000.

The steamer *Herman Winter* at Portland, Me., was set on fire on the 14th, and on the 28th the Oliphant plant of the

Du Pont Powder Co. at Uniontown, Pa., was blown up, four being hurt.

Only one fire was reported in April in munition plants, and no explosions were recorded. On the 4th the Silve Co. at South Bethlehem, Pa., making munitions, was burned out, with a loss of \$70,000.

One fire and two explosions came in May, 20 being killed and 45 hurt. On the 7th the Cadillac Chemical Co. at Cadillac, Mich., was burned, with a loss of \$150,000; and the next day the Atlas Powder Co. at Landing, N. J., was blown up, with a loss of 6 lives and 15 hurt. On the 14th the Du Pont plant at Gibbstown, N. J., was blown up, 14 being killed and 30 hurt.

On July 1 six men were killed and six were hurt in an explosion at the Emporium, Pa., plant of the Etna Powder Co., and on July 7 one man was killed and more than a score hurt at the Wilmington, Del., plant of the Du Pont Co.

July 30 saw the most spectacular and by far the most destructive explosion of the whole long series. This was the blowing up of the vast store of munitions at Black Tom, N. J., where they were being shipped abroad. This caused a loss of five lives and a property damage of \$25,000,000. New York City and surrounding cities and towns for miles around were shaken by the blast.

On August 20 two were killed at the Ashland, Wis., plant of the Du Pont Co., and the same day six were hurt at the New Brunswick, N. J., plant.

Early 1917 saw another sporadic outbreak of explosions in the United States, the plant of the Canadian Car & Foundry Co. at Kingsland, N. J., being blown up and destroyed by fire on the 11th. Seventeen persons were reported as missing and the property loss was \$16,000,000. The next day the Du Pont plant at Haskell, N. J., was again the scene of an explosion, 2 being killed and 12 hurt.

AND GERMANY WAS PRETENDING TO BE OUR FRIEND ALL THE TIME.

The famous "ZIMMERMANN NOTE," exposed by our Government March 1, 1917, is a document that should stick in the memories of all Americans. Remember, it was composed on January 19, 1917, at a time when Germany and America were officially very good friends, and the date was just three days before Mr. Wilson appeared in the Senate with his plan for a league to assure peace and justice to the world.

Zimmermann admitted the authenticity of the note, and only deplored that it had been discovered. The significant parts were these:

ZIMMERMANN NOTE.

BERLIN, January 19, 1917. (Note the date.)
ON FEBRUARY 1 WE INTEND TO BEGIN SUBMARINE WARFARE UNRESTRICTED. In spite of this it is our intention to keep neutral the United States of America.

If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.

The rest of the dispatch tells the German minister in Mexico to open secret negotiations with Carranza the moment war with us is certain, and to get Carranza to draw in Japan.

And then to add to this is the famous BERNSTORFF NOTE, which was intercepted in transit by our secret service:

BERNSTORFF NOTE.

Message from Ambassador Bernstorff to the Berlin foreign office, dated JANUARY 22, 1917 (note the date):

I request authority to pay out up to \$50,000 in order, as on former occasions, to influence Congress through the organization you know of, which can perhaps prevent war.

I am beginning in the meantime to act accordingly.

In the above circumstances a public official German declaration in favor of Ireland is highly desirable in order to gain the support of Irish influence here.

AN ADMITTED ATTEMPT TO CORRUPT THE CONGRESS OF THE UNITED STATES.

During the winter of 1916-17 the full extent of Bernstorff's treachery became known. It was definitely ascertained that the acts of violence heretofore enumerated were directed by the German agents. The President had some evidence to this effect prior to this time, and his plea for preparedness came about that time—fall of 1915—prompted, I believe, by the fresh evidences of treachery on the part of Germany that were coming to him. When the President spoke for commanding preparedness early in 1916 our people generally began to respond. Later in the spring I received a letter from a farmer friend of mine that showed the change in the trend of thought among the people. I have read it in public before, but I repeat it here:

AMERICA, KANS., R. F. D. 2,
March 12, 1916.

HON. DUDLEY DOOLITTLE,
Washington, D. C.

DEAR SIR: I am for Wilson's brand of preparedness for five special reasons, and they are five sturdy boys who call me Daddy. Young jay hawkers, every one of them, but men by and by and with enough

patriotic blood in their veins, I am sure, to spring to their country's call when needed. Give them a fighting chance with guns, ammunition, and equipment, so if they must lay down their lives the enemy will have paid the cost in advance. And, friend DOOLITTLE, us hayseed farmers want your farm-loan bill. Keep boosting.

Yours, truly,

STEVE BURCH.

DIFFERENCE BETWEEN MEXICO AND HIGH SEAS.

And there were some of our people who honestly could not see the difference in warning our citizens out of Mexico, which President Taft so wisely and patriotically did, and which President Wilson did in the same wise and patriotic manner, and warning them off the high seas. The difference is this: Mexico is under the control of the legally constituted Mexican Government; it has exclusive jurisdiction over the territory of Mexico. If by reason of revolution or rebellion—and be it remembered that Villa and his bands of cutthroats were vying with the Mexican federal troops at every hand and murdering people, both Mexicans and foreigners, pillaging towns and burning homes—other countries take into consideration the inability of the Government to preserve order and peace and relieve the impotent government authorities from the impossible task of protecting foreigners when they can not protect their own people. But on the high seas the property right of any country does not exist. Outside the 3-mile limit from the shores the ocean belongs to us all, equally share and share alike. Therefore, WHEN ANYBODY OR ANY NATION ATTEMPTS TO TELL YOU TO GET OFF THE OCEAN HE IS PLAYING THE PART OF THE IMPUDENT DICTATOR WHO INSISTS THAT YOU GET OFF YOUR OWN PROPERTY.

SALE OF MUNITIONS.

And then there were those among our population who thought that the sale and shipment of arms and ammunition to the belligerents was illegal, and that the selling of them by our manufacturers to the allies—and to Germany, for the undersea merchantman Deutschland came and went twice from our shores laden down with nickel and rubber sorely needed by Germany in making munitions—was illegal or unneutral.

IT WAS NEITHER UNNEUTRAL OR ILLEGAL. The sale of munitions by neutrals to belligerents is a recognized legal business throughout the world. You and I might not care to engage in the making of things to kill human beings, but that is a personal matter with us. American manufacturers sold to any buyer who could come and get the goods. Delivery was made at our waters' edge, and the purchaser had to have the ships there to take them away. Here is where Germany felt the British blockade; it was not that our manufacturers refused to sell to Germany—I dare say they would have been glad to make the added profit—but it was Germany's misfortune that she could not take munitions home from our shores. In the Spanish war Germany sold both to the United States and to Spain, and let it be remembered now that our country never protested to Germany the sales she made to Spain, although some reports of that kind have been published.

PREWAR ATTITUDE OF MUNITION MAKERS.

And then there were a few people who pretended to think, and some honestly thought, that American munition makers wanted to get our country into the war. If they did, there could be but one object, more profit to them. But the utter fallacy of this contention is so easy to see that it is hardly worth consideration. Before the United States became involved in the war our munition plants were working night and day, Sundays and holidays, filling contracts at fabulous prices for the allies. There was no limit on what they could charge, and their plants were repeatedly enlarged to greater capacity. Thousands of additional men were put to work. Many factories were converted into munition plants. Profits of 1,000 per cent were common. But what happened after we declared war? First, THE GOVERNMENT TOOK OVER MANY OF THE LARGER MUNITION PLANTS AND ALLOWED THE OWNERS REASONABLE COMPENSATION FOR THEIR USE. THEN THE PRICE WAS FIXED ON THE OUTPUT OF OTHERS AT LESS THAN HALF WHAT THE PRICES HAD BEEN, AND ON TOP OF THAT THE GOVERNMENT PLACED A WAR TAX OF FROM 20 TO 63 PER CENT, AND THE NEW REVENUE LAW INCREASED THESE TAXES TO 80 PER CENT.

CULTURE AND WORLD-WIDE DOMINION.

And what kind of an enemy was it that finally made it impossible for any self-respecting nation, any nation that expected to continue a free and independent sovereignty, to refrain from war? It was a nation which, in order to strike terror into the hearts of neutral neighbors and fright into the minds of conquered peoples, committed almost unspeakable outrages in Belgium—literally squashed the life out of brave little Belgium, because she happened to be located between Germany and France, and the Kaiser wanted to get to Paris.

Let me prove to all who would doubt that the Kaiser, as the exponent of Prussia and militarism, believes himself a partner with God; that he was ordained to rule the world; that

Germany was to be a world empire by force of the sword. Their teachings and their books are full of it. Here is some kultur!

The greatest and most intellectual writers and thinkers of Germany clamor for world dominion. In 1913 an official German report reads, in part:

Neither ridiculous shriekings for revenge by French Chauvinists, nor the Englishman's gnashing of teeth, nor the wild gestures of the Slav will turn us from our aim of protecting and extending German influence all the world over. It is our sacred duty to sharpen the sword that has been put into our hands and to hold it ready for defense as well as for offense. * * * We must accustom them (our people) to think that an offensive war on our part is a necessity. * * * We must stir up troubles in the north of Africa and in Russia. In the next European war it will also be necessary that the small States shall be forced to follow us or be subdued. In certain conditions their armies and their fortified places can be rapidly conquered or neutralized; this would probably be the case with Belgium and Holland.

This in 1913, when Germany in 1907 subscribed to the doctrine that the territory of a neutral power is inviolable and that—

Belligerents are forbidden to move across the territory of a neutral power troops or convoys, either of munitions of war or supplies.

And also in view of the fact that Germany, England, Russia, and France had guaranteed to respect the integrity and maintain the neutrality of Belgium.

This report well accords with Bismarck's utterance:

When the power of Prussia is concerned, I know no law.

Several years before the war the Pan Germanic League published a manifesto under the name of Universal Empire. It declared:

Progressive effort will be carried on until our batteries can be unmasked without danger. Europe will then find herself confronted by a situation already prepared, even to the minutest details, and against which she will be powerless.

The Kaiser said:

The sea is our empire; the trident is ours to wield.

German world-wide dominion was taught in the schools. Prof. Von Seyden declared in the *Frankfurter Zeitung*:

Germany should and wishes to be let alone. The Germans are the elect people of the earth. They will accomplish their destiny, which is to govern the world and to direct the other nations for the welfare of humanity.

Maximilian Hardin, in the *Die Zukunft*, said:

After all it is visibly the meaning of history that the white race, under the leadership of the Germans, shall arrive at the real and ultimate domination of the world.

Prof. Schmoller, a German publicist of great authority, is quoted as writing:

We must wish that at any price a German country peopled by twenty to thirty million Germans may grow up in southern Brazil.

Such teachings by the most intellectual men in Germany, after nearly 50 years of gigantic military preparation, coupled with a sincere belief in the minds of many that the German people were the chosen instruments of God to reform and chastise the world, well cause apprehension to the other powers.

J. L. Reimer, in a work entitled "*Ein Pandermanisches Deutschland*" (A Pan German Germany), writes in 1905:

It is precisely our craving for expansion that drives us into the paths of conquest, and, in view of which, all chatter about peace and humanity can and must remain nothing but chatter.

Klaus Wagner, in his work *Krieg or War*, in 1906, writes:

Let us bravely organize great forced migrations of the inferior peoples. Posterity will be grateful to us. We must coerce them. This is one of the tasks of war; the means must be superiority of armed force. Superficially such forced migrations and the penning up of inconvenienced peoples in narrow "reserves" may appear hard, but it is the only solution of the race question that is worthy of humanity. * * * Thus alone can the overpopulation of the earth be controlled; the efficient peoples must secure themselves elbow room by means of war, and the inefficient must be hemmed in and at last driven into reserves where they have no room to grow * * * and where, discouraged and rendered indifferent to the future by the spectacle of the superior energy of their conquerors, they may crawl slowly toward the peaceful death of weary and hopeless senility.

Again:

Every great people need new territory; it must expand over foreign soil; it must expel the foreigner by the power of the sword.

Albrecht Wirth, in his book *Orient und Weltpolitik*, published in 1913, writes:

One thing alone can really profit the German people—the acquisition of new territory.

Maximilian Harden, writing in his paper August 12, 1911, says:

Since the western powers restrict our right to life, it is necessary that we should attach one of them to us or that we should sweep them out of our way by force.

Again, July 29, 1911:

The hostile arrogance of the western powers releases us from all our treaty obligations * * * and forces the German Empire, resolutely defending her vital rights, to revive the ancient Prussian policy of conquest.

C. L. Poehlmann, writing in 1914 in his book, *The Good of the World War*, states:

If every representative, rising to the height of the great time in which he lives—

And so forth—

We shall be an unconquerable people, capable of ruling the world.

In a book, *Germany at the Beginning of the Twentieth Century*, which appeared in 1900, it is written, speaking of the method of conduct of war:

Even if there were no question of vengeance, even if we were not demanding reparation for ancient wrongs, * * * the crime of opposing the development of Germany is so great that the most trenchant measures are scarcely a sufficient punishment for it.

Again:

Whoever enters upon a war in future will do well to look only to his own interests and pay no heed to any so-called international law. He will do well to act without consideration and without scruple * * *

Nietzsche, in his work, *The Joyous Wisdom*, writes:

Hatred, delight in mischief, rapacity, and ambition, and whatever else is called evil, belong to the marvelous economy of the conservation of the race.

Again:

In reality the evil impulses are just in as high a degree expedient, indispensable, and conservative of the species as the good, only their function is different.

Gen. Hartman states in the thirteenth volume of his work on *Military Necessity and Humanity*, that—

Terrorism is seen to be a relatively gentle procedure, useful to keep in a state of obedience the masses of the people.

Reimer writes in his *Pan German Germany*:

If the nations in question have nothing Germanic in them and are therefore foreign to our kultur, the question at once arises, Do they stand in the way of our expansion, or do they not? In the latter case let them develop as their nature prescribes; in the former case it would be folly to spare them, for they would be like a wedge in our flesh, which we refrained from extracting only for their own sake. If we found ourselves forced to break up the historical form of the nation in order to separate its racial elements, taking what belongs to our race and rejecting what is foreign to it, we ought not therefore to have any moral scruples or to think ourselves inhuman.

In a series of pamphlets by the professors of Berlin University and a few others appears a sermon by Pastor D. Baugarten (1914-15), his subject being the Sermon on the Mount, and his statement is as follows:

Whoever can not prevail upon himself to approve from the bottom of his heart the sinking of the *Lusitania*, whoever can not conquer his sense of the gigantic cruelty to unnumbered perfectly innocent victims * * * and give himself up to honest delight at this victorious exploit of German defensive power, him we judge to be no true German.

In a publication, which appeared in 1914, "*Was uns der Krieg bringen muss*" (what the war must bring us), appears this statement:

Treaties under international law are no more than the formulated expression of the existent relations of power between States. If these relations of power have so far changed that a real or imaginary vital interest of one of the States demand and render possible the alterations of such treaties, it is the simple duty of the leader of that State to effect the alteration by all conceivable means, so long as the risk does not appear greater than the anticipated advantage.

Gen. von Bernhardt states in his book, *Germany and the Next War*:

The law of the strong holds good everywhere. Might is the supreme right, and the dispute as to what is right is decided by the arbitrament of war. War gives a biologically just decision.

Reimer states in his work:

Let it not be said that every people has a right to its existence—

And so forth—

By making play with this principle, one may put on a cheap appearance of civilization, but only so long as the people in question * * * does not stand in the way of a more powerful people.

Mr. Speaker, from the above quotations, which might be multiplied almost indefinitely, the philosophy of German autocracy is apparent. Kaiser Wilhelm said:

FIVE MEN HAVE DREAMED OF WORLD-WIDE DOMINION—ALEXANDER THE GREAT, CAESAR, THEODORIC II, FREDERICK THE GREAT, AND NAPOLEON. THEY FAILED, BUT I SHALL WIN BY MY MAILED FIST.

Von Buelow, the Imperial chancellor, says:

We Germans are the most learned people of the earth, and at the same time the most capable in war * * * the military and the intellectual deeds of the Germans are unequalled.

The chiefs of the intellectuals declared:

The German people are the elect of God and their enemies are His enemies.

It is astonishing how many intellectual people could get the idea that they hold a commission from God to regulate the universe. Said the Kaiser:

We Hohenzollerns take our crown from God alone, and to God alone are we responsible.

He contends that he is the vice regent of God; that he is His sword and weapon. He declares that upon him the spirit of God has descended, and he threatens with death all who disbelieve. As a boy he is said to have written on his photograph, presented to a friend:

Let them hate if they but fear.

He once stated to his soldiers, as they started to put down the Boxer rebellion:

Remember when you meet the foe that no quarter will be given and that no prisoners will be taken.

Again, he is reported as saying to his troops:

You are my soldiers. You have given yourself to me body and soul. If I were to ask you to fire upon your own brothers or your parents, or to put them to the sword, remember your oath.

He solemnly announced that—

the world will one day be made whole through the efficacy of the German character.

No wonder the powers of Europe were apprehensive when they listened to such teachings. German kultur teaches that they are morally superior to the other peoples of the world. How have they shown their kultur? How have they proved their morals? Admiral von Tirpitz declared two years ago that the allies' ships should be sunk without warning, and, according to newspaper reports, one German officer, high in rank, recently declared:

It were much better that all on board perished, as it would strike terror to the hearts of the enemies of Germany.

What does German kultur mean? What does German kultur stand for? If a tenth part of the reports we have received are true, it means soldiers going into guiltless, unhappy, defenseless Belgium and committing outrages which would have brought the blush of shame to the face of an aboriginal untutored savage. It means the wholesale violation of young girls before their anguished parents' eyes. It means holding up a white flag and firing on the unsuspecting soldiers as they approached. It means the slaughter of defenseless men, the bayoneting of little children, and the murder of gentlewomen. It means dropping bombs upon sleeping cities, where women and children were torn and mangled beyond recognition. It means the burning and destruction of Red Cross hospitals. It means deporting the men to work in the fields of Germany, leaving the wives and little ones at home to starve. It means cutting off the breasts of women and the hands of boys and girls. It means using helpless men, women, and children as human screens, forcing them to go before the German attack to be shot down by their friends. It means stealthily, silently creeping up on an unsuspecting passenger vessel and sending it to the bottom of the sea, and as the men, women, and children flounder, half strangled, drowning in the water, German kultur means that German bullets shall complete the work the torpedo started.

Credit is acknowledged to my colleagues, VENABLE and COLLIER, for many of these quotations.

This superior kultur was well illustrated in the murder of Miss Edith Cavell, an English nurse, who had in the hospitals nursed back to life again scores of wounded German soldiers. She assisted some wounded English and Belgian prisoners to escape. For this she was tried by a secret court-martial and sentenced to be executed. The American minister tried in every way in his power to save the life of this noble woman.

WAR.

On the 3d of April, 1917, the end came. The President asked Congress to declare that a state of war existed between the United States and Germany. Congress responded.

There are certain professional politicians and partisan candidates for office in the country who declare by inference that we should have gone into war sooner than we did. Other honest men actually think it; and that because President Wilson had waited until every honorable chance to settle our troubles without war had been exhausted, and because he had kept the country out of war for many months, he should be censured; that we should have been equally prepared with Germany, who had been at it for 40 years. They go so far as to state that the fact that he had kept us out of war was a fake campaign slogan made to fool the people and to catch votes. Witness, my friends, this extract from the Republican platform of this year:

"The Democratic slogan of 1916—'kept us out of war'—is now known to every intelligent person to have been political camouflage. Vital information was withheld from the public to make the slogan effective. * * * This concealment of facts showing the fixed and sinister purposes of Germany, and the failure for more than two years to make adequate preparation immeasurably increases the price in blood and money we must now pay for victory."

Shame on those who add this insult to President Wilson, the man who speaks and acts for the forces of humanity. Good Republicans everywhere have repudiated this charge of bad faith.

Let us ascertain the change in status between election day, November 6, 1916, and April 6, 1917, when war was declared. The Zimmerman note of January 19, 1917, was intercepted on the cable; the Bernstorff message of January 22, 1917, was caught in transit, and the solemn pledge given the United States

by Germany May 4, 1916, after the sinking of the *Sussex*, was withdrawn January 31, 1917; and the "overt acts," after final warning and our breaking off of diplomatic relations February 3, 1917, came with the sinking of the *Algonquin*, March 2, 1917, the *Vigilancia*, with five Americans lost, on the 16th; the *City of Memphis*, with eight lost, and the *Illinois* the same day.

With these absolute proofs could any self-respecting nation REFUSE TO FIGHT TO REDEEM BY FORCE WHAT PATIENT DIPLOMACY AND AMPLE WARNING HAD FAILED TO DO AND COULD NOT DO? I say to you, my friends, that had war been declared before it was declared there might have been a reasonable doubt in the minds of many good citizens that we might have avoided war, and I SAY TO YOU WITH EQUAL CONFIDENCE THAT HAD THE PRESIDENT KEPT US OUT OF WAR LONGER THAN HE DID, WE SHOULD HAVE CEASED TO BE A SELF-RESPECTING NATION, OR WORTHY OF THE RESPECT OF THE WORLD.

GERMAN-BLOOD RESOLUTION.

There was a resolution introduced in Congress to prevent the drafting of citizens of German blood to fight their kin across the seas. Let us see about this. When that resolution was introduced there was Ferdinand Hohenzollern, of Roumania, fighting William Hohenzollern, of Germany; Cousin William, of Germany, was fighting his Cousin Nicholas, of Russia; Cousin George, of England, was fighting his Cousin William, of Germany; and Nephew Alex, of Greece, was fighting his Uncle William, of Germany. Could a larger, more bitter family row be imagined? And still a resolution actually got into Congress on the pretended theory that it was too inhumane for blood to fight blood. IF BLOOD HAD NOT FOUGHT BLOOD, BROTHER FOUGHT BROTHER IN OUR CIVIL WAR, WHAT WOULD HAVE BECOME OF THE UNION? This was not aimed toward our winning the war.

The "German-blood" resolution was introduced by an Illinois Congressman who represents a district where 57 per cent of the residents are of German descent. I wonder what the loyal German-Americans the country over think of that kind of business? I venture the statement that few favor it.

ANOTHER RESOLUTION.

Then another Illinois Congressman introduced a bill which, if passed, would have prevented our sending our drafted soldiers out of the United States across the seas. This resolution, if carried, would have crippled us badly. More truckling to un-American sentiment and votes.

PARTISAN AGITATION.

Another thing that hurts our cause is PARTISAN AGITATION. PROFESSIONAL POLITICIANS AND SPYGLASS CRITICS HAVE HAGGLED THE PRESIDENT, THE COMMANDER IN CHIEF. *They have indulged in joyous faultfinding, gloated at our shortcomings, and sneered at the efforts of this great, peaceful giant of a Nation laboriously turning itself from the paths of peace to the business of war.* To keep their consuming partisanship alive they have worked overtime to discover "issues" for election purposes that they could use to run for office on—the professional politician cares for "issues" only as a means for obtaining a political job.

Mr. Speaker, certain partisans are making insistent efforts in different parts of the country to make the people believe that they were exceedingly simple and lacking in ordinary intelligence and were buncoed and defrauded in the election of 1916 when they voted for President Wilson because of his success in keeping the country out of war. That was one big reason why they voted for him, and there were others. The politicians who are searching for an issue should not proceed further in their efforts to make the people think they were fooled. President Wilson made no promise that he could keep us out of war. THE PEOPLE VOTED FOR HIM BECAUSE THEY KNEW HE WOULD DO IT BY THE SAME TOKEN THAT HE HAD DONE IT, IF IT COULD HONORABLY BE DONE. THEY HAD CONFIDENCE IN HIM, AND PARTISANS SHOULD NOT BELITTLE AND BEMIRCH HIS PATIENT, HONEST EFFORTS TO PRESERVE PEACE, which peace was denied our country by the ACTS AND CRIMES OF GERMANY AFTER THE ELECTION OF 1916 AND BEFORE THE DECLARATION OF WAR IN APRIL, 1917, which I have heretofore set forth in detail.

FIGHT OR NOT FIGHT.

These professional critics and ambitious politicians should state once for all and answer the question that presents itself: WOULD THEY HAVE GONE TO WAR SOONER? WOULD THEY HAVE REFRAINED FROM WAR AFTER THE WITHDRAWAL OF GERMANY'S SUBMARINE PLEDGE, ON JANUARY 31, 1917, AND THE DELIBERATE ACTS IN THE SINKING OF THESE AMERICAN SHIPS AND MURDER OF OUR CITIZENS ON MARCH 12, 16, and 17, 1917?

CANTONMENTS.

Climatic conditions alone were responsible for the location of most of the larger cantonments in the milder climate of the Southern States. It may be stated, however, to keep the record

straight, that in our war expenditures five of every six dollars have been spent in the North. Camps, training stations, hospitals, Army, Navy, and Marine barracks and cantonments are in the North and in the South; 158 north of Mason and Dixon's line and 86 south.

COMMITTEE CHAIRMANSHIPS.

Committee chairmanships go by seniority and it happens that in many instances the longest service Member is from a Southern State, where they have the habit of keeping a man in Congress for many terms. As an example, Mr. PADGETT, chairman of the Committee on Naval Affairs, has been in Congress 18 years, and is from Tennessee. Gen. SHERWOOD, of Ohio, has been in Congress 20 years and is chairman of the Invalid Pensions Committee.

PRICE OF WHEAT FIXED.

The fixing of the price on wheat is an entirely different matter from cotton. The price of cotton will be fixed. WHEAT IS THE ONE UNIVERSAL FOOD. Wheat flour is the only flour that will keep in all climates, on land and sea, indefinitely. It is the only cereal food that always arrives sweet after the long sea voyage in a damp ship.

The people of the allied countries, except Italy KNEW NOTHING OF THE USE OF CORN MEAL AND THEY HAD NO CORN MILLS. Wheat had to be available to keep one of our allies, at least, fighting, and Mr. Hoover says if the price of wheat had not been fixed and a supply thereby guaranteed—because with a limited supply and no limit to prices the few rich would have gotten the wheat and the poorer classes would have had none—we might to-day have been fighting Germany single-handed. A hungry soldier with a hungry wife and starving children at home can not remain long in the battle line. A hungry nation with hungry soldiers and starving citizens can not long remain a factor in modern warfare, and that was the position of France when the price of our wheat was fixed.

The guaranteed price of wheat in a distinct advantage to the American consumer. Should the war be won before the next harvest it will sustain the price to the producer and save him from loss.

I am not defending the failure to fix the price of cotton, but I am showing that wheat and cotton and every other farm product are not in the same class as an absolute essential war food. Cotton lintners, that is, the fuzz on the cotton seed, are used in the making of munitions and were selling for 9½ cents per pound until the Government commandeered them at 4½ cents per pound. Here are the average prewar prices for four years for cotton and wheat, and the average four years of war prices: Cotton, 12½ cents per pound prewar, 16½ cents during the war; wheat 87½ cents per bushel prewar, 1.43½ during the war.

GENERAL PRICE FIXING TO DEFEAT PROFITEER.

I would fix the price of every commodity and manufacture required for our use during the war as a sure and definite means of CURBING THE MANIPULATOR AND THE PROFITEER AND TO STABILIZE PRICES. I would even go further, Mr. Speaker, I would have the GOVERNMENT ABSORB THE LOSS OCCASIONED BY HIGH PRICES TO PRODUCERS AND REDUCED PRICES TO CONSUMERS. The cost of living is outrageous, and I have become convinced that the only absolute remedy is an enlargement of the English system of government absorption of losses and differences in cost. England has the 5-cent loaf of bread made from our wheat and high-priced substitutes, and the Government stands the loss of about 4 cents on each loaf. And permit me to name the things on which prices have been fixed by agreement in the United States, and let it be remembered that the first two are southern products exclusively: Rice, hemp, lumber, sugar, steel, copper, wool, zinc, cotton fabrics, hides and leather, aluminum, cement, cement gravel, cotton lintners, and a few others. The "agreement" does not work well in all instances, hides and leather for example. The list will be enlarged and stabilized by statute.

COST-PLUS CONTRACTS CRITICIZED.

We were in a rush and had to have cantonments for our soldiers. Contractors had no precedents to go by to base bids on, and the cost-plus contracts were entered into by the Government. I am opposed to this sort of contract, generally, but we could not wait to discuss prices as carefully as in peace times. The public has been misled as to these contracts. Here is the way they work: If the cost of the work is \$100,000 or under, a fee of 7 per cent of such cost. As the cost of the work increases the per cent of profit decreases, when the cost reaches \$10,000,000 the per cent of profit has been reduced to 2½ per cent.

WAR ACHIEVEMENTS.

Mr. Speaker, the United States has put more than one million and three-quarter soldiers in France. We have 594,000 men in our Navy, and our Navy is second only to Great Britain. When

we entered the war we had 65 officers and 1,120 men in the air service. To-day we have 6,600 officers and 150,000 men in that service. Before the war we had 3 small aviation fields, and to-day we have 28. Before the war we had less than 200 aeroplanes, and to-day we have more than 6,000 American-built planes and more than 2,100 in France.

The War Department has told us in detail where some of the money derived from taxation and liberty bonds has been spent or contracted:

Artillery	\$1,050,000,000
Automatic rifles	300,000,000
Small arms	100,000,000
Artillery ammunition	1,900,000,000
Small-arms ammunition	340,000,000
Small-arms ammunition practice	80,000,409
Stores and supplies (personal, horse, and organization)	230,000,000
Armored motor cars	100,000,000
Total	4,100,000,000

Expenditures in connection with military engineering operations directly relating to the war have exceeded \$375,000,000 during the past year, of which the larger part went for docks and railways in France.

It is recognized that the American Army is well clothed and fed, but some illustrative figures of quartermaster purchases may prove interesting. Take six standard articles of food. Since the beginning of our participation in the war there have been bought for Army use 625,461,392 pounds of flour, at a cost of \$37,000,000; 186,582,316 pounds of sugar, at a cost of \$14,452,512; 110,451,670 pounds of bacon, at a cost of \$43,375,445; 102,894,742 pounds of dry beans, at a cost of \$12,613,469; 72,274,529 cans of tomatoes, at a cost of \$9,278,121; and 38,421,256 pounds of rice, at a cost of \$2,775,519. These are only a few of the items on the Army's bill of fare, but they give an idea of the size of Uncle Sam's market basket.

Here is an idea of the Army's clothing bill from April 1, 1917, to August 1, 1918:

Article.	Quantity.	Value.
Shoes, marching	11,933,000	\$53,488,450
Shoes, field	15,343,000	71,631,810
Coats, cotton	6,673,000	16,993,000
Coats, wool	12,854,000	87,217,920
Breeches, cotton	14,361,000	21,270,000
Breeches, wool	15,439,000	74,512,380
Shirts, cotton	4,038,000	4,038,000
Undershirts, cotton	50,518,000	30,327,600
Undershirts, winter	33,225,000	66,450,000
Shirts, flannel	21,389,000	71,861,500
Drawers, cotton	41,352,000	24,811,200
Drawers, winter	41,690,000	83,380,000
Stockings, cotton	22,654,000	3,624,640
Stockings, wool, light weight	70,592,000	24,707,200
Stockings, wool, heavy	63,426,000	34,884,400
Hats, service	7,779,000	15,558,000
Blankets, 3 pounds	14,134,000	91,871,000
Blankets, 4 pounds	6,871,000	54,968,000

The axes and helves bought for the Army since we entered the war number 5,121,729, costing \$6,397,961. There are 34,972 rolling kitchens, which cost \$47,480,000; 38,427 field ranges, costing \$1,635,994; 109,306 carpenter's chests, costing \$2,732,650; and 5,600 blacksmith's chests, costing \$224,000. The Army is using 2,574,982 shovels, costing \$1 each; 1,392,500 lantern globes, costing 30 cents each; 105,727 desks, costing \$1,377,360; and 47,541 portable forges, costing \$950,820.

There have been contracted for 106,000 motor trucks of all types, sizes, and styles, costing \$240,315,000; 10,700 passenger cars, costing \$12,275,000; 54,400 motorcycles, costing \$10,255,000; together with many thousand bicycles and cargo and tank trailers.

Of wagons and carts the total number is 266,000 and the cost, \$37,025,000. There are 278,772 horses and 131,917 mules, costing \$98,857,622 and the forage for them consists of 1,064,251 tons of hay, costing \$31,927,530, and 592,749 tons of oats at a cost of \$29,637,450, the harness bill alone runs to \$29,040,000.

These are only a few of the figures showing how the people's money is going into the war, but they register a will for victory. The sums are large, but the need is great and the results, it is believed, will vindicate them.

NAVY AND SHIPS.

When we entered the war, 18 months ago, we had in the Navy 304 ships; to-day we have 1,720 ships. At one of the large aviation fields I have just mentioned 135 aeroplanes have been counted flying at one time. We have 16 large cantonments, each containing 1,400 separate buildings. We have a merchant marine that is expanding at the rate of four ships per day. We have more than 1,000 American-built vessels and 400 vessels that we have requisitioned. The tonnage of our

shipping has increased from slightly over 1,000,000 tons, 18 months ago, to about 7,100,000 tons now. Our Red Cross has thousands of nurses and workers. Our Y. M. C. A., K. of C., and Y. W. C. A. have thousands in war work. Every industry in this country is going full blast on a strictly war basis.

The administration has created a Bureau of War-Risk Insurance which has issued 5,227,000 checks to dependents of soldiers, aggregating the sum of \$160,568,598.53, and the total number of beneficiaries is more than 1,012,000.

We have bought 20,000 freight cars. Twenty million blankets have been contracted and 40,000,000 yards of mosquito netting for the protection of our soldiers.

Food is bought for them in such units as 110,000,000 cans of baked beans—a single recent purchase—91,000,000 cans of condensed milk, and 20,287 pounds of prunes.

We have 240,000 machine guns, 725,000 automatic pistols, and 2,484,000 rifles. The number of heavy guns is not given out for military reasons. We are making 15,000,000 cartridges each day.

We stopped the waste of foodstuffs in the making of whisky September 10, 1917, and the making of beer, near beer, and wine has been stopped to take effect October 1 this year. Complete prohibition of the sale of intoxicating liquor of all kinds goes into effect July 1, 1919.

We have built a thousand miles of railroad in France and huge concrete docks 3 miles in length. AND BY THE GRACE OF GOD, THE PATRIOTIC EFFORTS OF OUR FARMERS, AND THE CONSERVATION OF OUR WOMEN IN THE KITCHENS, WE ARE FEEDING OURSELVES AND 120,000,000 HUNGRY MOUTHS OF OUR FRIENDS ACROSS THE SEAS AND WE HAVE LOANED MORE THAN \$6,000,000,000 TO OUR ALLIES.

Aircraft failures are regrettable, but they are not nearly so bad as the happy critic would have us believe.

PATRIOTISM V. PARTISANSHIP.

PARTISANSHIP HAS NO PLACE IN THE UNITED STATES TO-DAY. MR. SPEAKER, THIS IS AMERICA'S WAR. WE MAY BE DEMOCRATS OR REPUBLICANS, BUT WE ARE AMERICANS FIRST. PARTY EMBLEMS SHOULD BE MERGED IN WAR TIME INTO THE ONE NATIONAL EMBLEM—OUR COUNTRY'S FLAG. Patriotism can not be produced from a cross-breed of prejudices. Do not cripple the war machine to repair the party band wagon. UNITY AT HOME MEANS STRENGTH ABROAD. It means encouragement to our brave boys in the trenches, on the seas, and our gallant allies. IT MEANS CONSTERNATION AND DESPAIR TO OUR ENEMIES. Congress is a part of our war machine; the material in this machine has been tested and most of it found true.

Congressmen of both parties who are standing for America and a peace by victory are not seeking the votes of cowards and pro-Germans. THE KAISER WOULD VOTE AGAINST THOSE MEN; it would please him and hearten his doomed autocracy if every American Congressman, Democrat and Republican, who had stood for the United States could be defeated in November. IT WOULD BE HAPPY NEWS IN BERLIN TO HEAR THAT AMERICA'S WAR CONGRESS HAD BEEN REPUDIATED BY THE VOTERS. Our enemies would consider the defeat of those public servants by the votes of our people a sure sign that we are not standing behind the administration and our soldiers in the trenches in the prosecution of the war to victory. Germany's assumption would not be true, but, to quote ex-President Roosevelt, when the United States was at war with Spain:

Remember, whether you will or not, your votes this year will be viewed by the nations of Europe from one standpoint only. They will draw no fine distinction. A refusal to sustain the President this year will, in their eyes, be read as a refusal to sustain the war and to sustain the efforts of our peace commission to secure the fruit of war.

KEEP THE FLAG ABOVE THE PARTY! Experimenting with untried material with the eyes of the world looking on, and when "they will draw no fine distinction," is taking grave chances. Experimenting with new men in new places in war times is more than a grave chance. It is ignoring the red beacon light of danger.

PROFESSIONAL CRITICS.

Carping criticism, petty, jealous, destructive faultfinding, not to be confused with constructive suggestion, is damaging our cause. I must admit that people who fly into print and howl from public platforms their "constructive criticism" become suspicious subjects as to the genuineness of their criticism and come in for close scrutiny to get at the real motive behind it, according to my way of thinking. It is mostly politics. *It is sweet music to the ears of the Kaiser when we quarrel and haggle among ourselves.*

The subtle manner adopted by these strict partisan leaders to divide the country against itself in war time is unbecoming good citizenship. Soldiers from North, South, East, and West are fighting our battles in France. Our Nation as one solid unit

is standing behind these boys in the trenches and will look with small favor on the man who tries to stir up sectionalism and factionalism at home in the search of an issue to run for office on. Our people will not stand for contemptible insinuations against the administration; let there be "no North, no South, no East, no West." Partisans who yearn for office in the guise of "country servers" may find generous demand for their ability in the Red Cross, Young Men's Christian Association, or the Army. This seems to have missed their attention in their burst of eagerness for "national service" on the public pay roll.

And instead of holding the Nation in the bonds of unity we have some political agitators subtly raising the old sectional issue of the North and the South, to kindle anew the fires of prejudice and hatred that burned so fiercely during the Civil War, and all for the purpose of prejudicing the minds of our people against the administration in the hopes that these politicians may profit.

Mr. Speaker, we have prayed and worked that the day of the "BLOODY SHIRT" MIGHT PASS. IT HAS PASSED. THE ONLY RIVALRY NOW BETWEEN THE BOYS OF THE BLUE AND THE BOYS OF THE GRAY IS TO SEE WHICH CAN FIRST PLANT THE STARS AND STRIPES ON THE RAMPARTS OF BERLIN.

A ROGUE ISSUE.

Midnight oil has been burned in the hunt for issues, and here is one which seems to have been found, with the manufacturer's trade-mark still wet, that "THE PRESIDENT IS MAKING IT A ONE-PARTY WAR." I am at a loss to know just what that means. If it means that Democrats and Republicans have not joined in support of war measures they are mistaken, and if they mean that members of both parties do not hold important positions in war activities they are again mistaken. Gentlemen, certain politicians have hatched out the thin issue, and the facts must be stated that the people may know.

THE RECORD.

Mr. Speaker, I have watched closely the votes of Democrats and Republicans before and during this crisis, and the record, which I shall quote briefly, bears me out when I say that most members of both parties have stood squarely for America. Among the acid tests were the McLemore resolution; there were 181 Democrats against it and 93 Republicans against it; there were 31 Democrats for it and 105 Republicans for it. On the declaration of war against Germany there were 181 Democrats and 189 Republicans for it, and 16 Democrats and 32 Republicans voted against it. On the armed-neutrality bill 213 Democrats and 184 Republicans voted yea, 2 Democrats and 10 Republicans voted no. On the arms-embargo amendment 48 Democrats and 73 Republicans voted for it, and 160 Democrats and 121 Republicans voted against it. On the draft act 190 Democrats and 204 Republicans voted for it and 13 Democrats and 9 Republicans voted against it. On the war-revenue bill 151 Democrats and 84 Republicans voted yea and no Democrats and 76 Republicans voted nay. On the food-control bill 168 Democrats and 191 Republicans voted yea, 3 Democrats and 2 Republicans voted no.

APPOINTMENTS.

And what about appointive officers in war matters? THE PRESIDENT IS HEAD OF ALL WAR ACTIVITIES, as Commander in Chief. HE MAY APPOINT AT WILL. He appointed Herbert Hoover—he is a Republican. Charles M. Schwab, head of the United States Shipping Board, is a Republican. Mr. H. P. Davison, head of the war council of the Red Cross, is a Republican. Dr. Garfield, the fuel administrator, is not a Democrat, and neither is Gen. Pershing. The director of the Council of National Defense is Walter S. Gifford, of Massachusetts, a Republican. Senator Root, Republican leader, was selected to head the mission to Russia, and the 1916 nominee, Charles E. Hughes, was appointed to conduct the aircraft investigation. Former President Taft is joint chairman of the War Labor Board. Howard E. Coffin, Republican, is chairman aircraft production committee. F. S. Peabody, chairman of the coal production committee, is a Republican. Frank A. Scott, chairman General Munitions Board, is a Republican. Julius Rosenwald, chairman supplies committee, is a Republican. Mr. Leffingwell, Assistant Secretary of the Treasury, is a Republican. Mr. Crowell, Assistant Secretary of War is a Republican. Any "one-party war" about this? And Woodrow Wilson sanctioned it.

THINGS THAT HELP WIN.

I am going to enumerate a few more things that are helping us win the war. The selective draft is the sure guarantee of success. Mr. Speaker, to me the question of a volunteer system of selective conscription—the draft system, if you please—is answered plainly and clearly. I reached my decision, in the main, based on the following facts:

THE DRAFT.

Our Republic is the greatest of all democracies. It is the duty of every citizen to fight for his country if he be required. Every patriotic, red-blooded young American would respond to a call for volunteers. The praise of neighbors, comrades, and Government accompanies those who go to the front. But no man who would volunteer not is deprived under the draft of an opportunity to prove his patriotism, and the slacker is made to do his share.

Not all the red-blooded young men are needed in the Army, however; millions are needed on the farms. A nation or an army can not exist without sustenance. A doctor is of more value just behind the firing line than in the line. On the firing line he would have but one life to give to his country. Behind the lines he might save hundreds of lives for his country. A young chemist on the firing line might kill a half dozen of the enemy; kept at work in the powder factory he would aid in furnishing ammunition to destroy a thousand. And so we could go on.

Mr. Hoover has said that "Food will win the war." Food is the prime essential; without it men and munitions are impotent. The civil population of our country and allied countries are experiencing the highest cost of living in the world's history. There are two possible remedies for this condition—elimination of food speculators and profiteers, which are being strenuously attacked, and the production of more food. Everywhere is the cry, "More food." In their efforts to produce more food the farmers have been seriously handicapped by the almost complete disappearance of farm labor. The situation is so acute and has been so pressing that many futile efforts have been made to get the labor. Farm and labor organizations throughout the country, leading men, and Government and State officials have considered various sorts of legislation. Prominent men from Kansas and other States came to Washington for conferences, and as a result of these conditions I introduced in the House of Representatives a resolution that would have provided the farm labor, and therefore more food. It is a "farm-or-flight" bill, and, in brief, would have relieved from military service and held on the farms bona fide farmers and farm labor so long as they produced food and continued to do so. The selective-draft law attempts to help out in food production when it specifically declares farming an essential industry, along with other industries like munition works and railroading, and provides for deferred classification. The greatest difficulty has been experienced according to the Food Administration and the Department of Agriculture, in getting draft boards to construe the law properly, and in some counties throughout the United States not one farmer or farm laborer has been given deferred classification on agricultural grounds. Such failure to carry out the intent and spirit of the law has been condemned by Mr. Hoover. Farmers are patriotic and have not pressed their claims, preferring to fight rather than farm if the local authorities felt there was more need for them in the trenches than on the farm; but people who know the food requirements and see the pinch of the poor, and even the family of the average citizen, have expressed their concern. The St. Louis Post-Dispatch, commenting editorially on my original bill, September 10, 1917, says:

If the food production is really as important in this world war as actual fighting, as everyone admits, can we afford not to exempt the only men who are accustomed to the heavy work of bringing out of the soil and garnering the wheat, the corn, and all other food products?

The farm-labor furlough bill recently passed by Congress is the outcome of this situation, and our food producers should not retain the mistaken idea that all the war power of the Republic is in the trenches. Every citizen who produces and conserves is engaged in a highly patriotic undertaking. Without food there can be no army.

The patriotic citizen should not have to decide whether, to serve his country best, he should stay at home or go. If he determines it himself and patriotically decides that he can render more service to his country by staying at his employment, his own neighbors may charge him with lack of patriotism and being a slacker and a coward.

The essence of national service in these trying days is to place oneself at the disposal of the Government for whatever the Government may think best. The individual can not for himself decide where he is most needed; the Government alone can decide. Herein lies the weakness and the unfairness of the volunteer system. It is not a matter of personal choice; it is a matter of national obligation. The fundamentals of democracy demand that what is the business of all must be the duty of all. Democracy means that all shall be treated the same.

The willing patriot should not be sacrificed on the altar of duty because the unwilling shirker prefers to stay at home and

let others take the risk. Selective conscription is the only method that puts all citizens on the same equal basis regardless of social status. It is the democratic scheme, because influence or position in life are of no avail in seeking to escape a plain duty to serve the Republic. Exemption can not be purchased. In a land of equal opportunity and favor there shall also be equal liability and equal obligation resting upon one and all alike when the Nation needs its sons on the battle field. Selective conscription, as defined by the President, the Commander in Chief of the Army and Navy, is not a last alternative; it is a first choice. The Government in time of war should say who it wants for the Army and who to stay at home to balance the fighting efficiency of the Nation.

I reached this conclusion in favor of the selective draft in war time, as against the volunteer system, in spite of my former prejudice against the draft and my strong leaning toward the volunteer system, and I reached the correct conclusion before we voted the draft. I had failed to distinguish between the historical excellence of the volunteer soldier's service and the woefully imperfect system, honeycombed with partisan politics, favoritism, and chance, under which the private volunteer served.

Under the volunteer system of the Civil War President Lincoln called for volunteers. Many thousands of patriots responded. He called again, and more came. As the ranks became depleted from losses, he called still again, and more boys sprang to the colors. You may think that they came in to fill up the decimated companies and regiments, but they did not. Some men, and frequently a politician, recruited an entirely new company or regiment and had himself made captain or colonel. Green officers, men and all, came in as a unit, leaving the veteran companies with as low as 16 men, but a full set of officers.

Members of Congress, together with other Government and State officials, were exempted under the draft. The matter of exemption should not have been brought up, but should have been left to the requirements of a national service and controlled by an order of the President, if he wanted them exempt. I was one to vote against these statutory exemptions.

From the personal standpoint I made one supreme test of myself: Would I be willing to have some one else vote to draft me? I decided in the affirmative, and in making out my questionnaire I shall waive all right to exemption and ask that I be placed in class 1 with the others of my age. I have never voted to place a burden—if this be a burden—on another that I would not be willing to assume myself.

DRAFTING THE 18 TO 45.

Mr. Speaker, one of the hardest votes I have ever been called upon to cast during my six years in Congress was the one to draft the boys from 18 to 21 years old. But as much as we dreaded the casting of this vote, as much as the Secretary of War, the Chief of Staff, and the Provost Marshal General recommended it, still the one sincere, honest conviction of those who know is that necessity commanded us to make this sacrifice in order that we may win this war, and to that decision we must assent. We have entered the war prepared to give all for the preservation of right, and sentiment, dear as it is to us all, must give way to necessity.

I was happy when I could cast my vote for the so-called Dent amendment to put the 18-year old boys in a class by themselves, not to be drafted for the trenches until class 1 of the older boys and men had been called. I prefer that they should be schooled and drilled, and by having them not called until the older members of class 1 from 19 to 45 are exhausted would be *proof positive* that 18-year-olds are required. The amendment was lost by a vote of 147 to 194, but the War Department has covered the matter by regulation placing the 18-year-old boys in a class to themselves as we desired.

WHEN THE WAR IS OVER.

When the days of peace come after the war is won, our country will be faced with a situation entirely new. The world will have been purged of Kaiserism and the stigma of militarism; a bond of fellowship will link us, and the smile of good cheer and companionship will abound as never before. The soldier boys and the sailors will be back from their glorious achievements in France, Belgium, and Germany; many will have souvenirs as tokens of their entrance into Berlin. Proud parents, happy wives, and loving sweethearts will stand open armed to receive the elect of this earth. The population of the country will vie with each other to pay the supreme respect to these heroes, and rejoicing will be all over the land. But there will be the problems that must of course face us. The capitalists will want the railroads returned to them, and the telegraph owners will want to resume control. The packing houses, which

I am confident will have been taken over by the Government, will be seeking to free themselves from Government control and operation. Wage readjustments, price assurances, and the problems peculiar to soldiers returning to their former trades and callings, or to new ones, will require the close attention and study of our citizens and lawmakers. Flood-control legislation must be pressed.

Mr. Speaker, the war period is not a time to give Government operation of the railways a fair trial, but it has relieved the freight congestion. By reason of the extreme crush in passenger service the Director General has done everything possible to discourage unnecessary travel. Rates have been raised and certain accommodations discontinued. In peace times this would be exactly reversed—rates would be lowered and better accommodations provided. Closer time would be made at connecting points, and railway building extensions could be carried out to completion. The recent report of the Federal Trade Commission on the packing business proves what we have known for a long time, and if the President feels that he has not the power under existing law to take over these concerns Congress must provide the necessary authority. Different farmers and live-stock organizations throughout the country have urged this procedure, and consumers everywhere have demanded that something radical be done.

The packers have no love for me, as was disclosed in the private files of Cudahy and Morris, and their desire to bring about my defeat in 1916 and their same desire this year is not surprising. But that is not the cause of my determination to bring about a square deal from these big concerns. Listen to this extract from one of Swift's advertisements:

The packers profits average \$1.29 per head.

Now listen to what Charles H. Swift wrote in a private letter to Louis F. Swift and Edward F. Swift, which says:

If ours and Libby's cattle were thrown together, without including sausage or anything for good measure it would bring ours up over \$2 per head—

Libby, McNeill & Libby, cannery, a subsidiary of Swift & Co.—over \$2 per head *without the sausage!* I have already spoken at some length on the packers in a former address to the House. Congressman BORLAND, of Missouri, who was recently defeated for renomination to Congress, lays his defeat to the activity of the packers working through business concerns and banks in which they were interested. He was defeated because he dared to tackle the meat monopoly.

The packers control the price they pay the producer for live stock, and the price they charge the consumer for meat; they control the ownership of the stockyards at terminal markets and the terminal railways. Cattle-loan companies to a great extent are under their supervision, and some trade papers reflect their sinister influence. The packers control the price of raw hides and the cost of leather through their ownership of the tanneries. They are becoming a menace in their operation of canned fruit and canned vegetable markets. They have embarked into the hotel and restaurant business. Their control of fertilizer and cottonseed products is not far from complete. They have committed frauds on the public by squeezing fat out of bacon and pressing in water, as an example. Much of their activity is directed toward the shaping and control of legislation to their selfish, if not corrupt, ends. They have tried for undue advantages and favors from Government employees and endeavored to fill departments with their friends. At least one packer stole public property and made advances to bribe public officials. They have pushed themselves into local politics and have been active in cunning schemes to defeat Congressmen who were unfriendly. They are confessed lawbreakers and wholesale liars.

USE OF FRANK.

Another bogus issue, Mr. Speaker, is a more personal one. Certain unfriendly persons and newspapers have maliciously or ignorantly accused me by innuendo or direct statements of abusing my franking privilege accorded by law to all Members of Congress. A specific instance occurred in connection with the so-called Dent amendment to the new draft act. One metropolitan paper of large circulation in Kansas, in discussing the votes of Congressmen LITTLE, CAMPBELL, HELVERING, AYRES, and myself—two Republicans and three Democrats—unjustly accused us of voting "to weaken" the draft act when we voted for the Dent amendment, but the paper did not print the amendment, and the public was left in the dark as to what it was. I wrote the paper as courteously as I knew how and requested that it print the text. I was determined that our people should know what it was that their Congressmen had been accused of voting for "to weaken" the draft act, and I sent to the fourth district, including the county papers, some 75 copies, of the following statements under my frank:

A metropolitan daily paper says two Republican and three Democratic Congressmen from Kansas voted "to weaken" the new draft bill when they voted for the so-called Dent amendment, but it failed to inform its readers what that amendment was. Here it is: "Registrants, who on the date fixed by the President for registering are of the age of 18 years, and not over 19 years, shall be designated as the 18 class, and shall be drafted for service subsequent to registrants in class 1 of the age of 19 years and over 19 years." France has not yet had to call her 18-year-olds.

A reading of the amendment is its own best argument.

This statement is as good an illustration of the proper use of the frank as I can think of. The franking law was passed years ago to stimulate the free exchange of thought between Congressmen and their constituents; between the Government agencies in Washington and the rest of the country.

The article in question was specifically approved by the Post Office Department.

Since I first became a Member of Congress I have felt it my plain duty and a real pleasure to keep in close communication with the people I represent in Washington. I try to write at least once each year to every one of my constituents and to account to them each Congress. The many replies I receive have helped me wonderfully in my work here. The exchange of views and suggestions has been valuable to me. And let it be known that the stationery, printing, and so forth, is paid for out of my own pocket, the same as every other Member of Congress. I have sent out large numbers of bulletins on various subjects—Infant Care, The Use of Wheat Substitutes, The Working of the Farm Loan Law, and others among them.

I have sent such books that came to my credit for distribution to persons that I thought would care for them. I have sent Government field seeds and garden seeds that were credited to me by the Agricultural Department. I have mailed the report of the Federal Trade Commission condemning the meat packers as a monopoly and making curative suggestions, letters to old soldiers and widows telling them of pension legislation and to parents and wives of men in the service advising them of my desire to be of every possible service in helping them communicate with the boys in the trenches and on the seas, to help in their allotments and allowances. I have sent speeches from time to time on matters I thought would interest the people and which I hoped would give them information on matters of public and personal interest—and that is what I am going to do with these remarks. And no postage has been paid on any of them, because the law says they shall go free. *The use of the frank has been abused at times, but not by me, Mr. Speaker.*

I am interested to know to what brand of good sense or judgment partisans appeal when they swing the party lash this year, at the same time crying "No one-party war." Consistency, thou art a lost word. I venture the assertion that these leaders who assume to advise the rank and file will be informed November 5 that party ties hold lightly in America when our country fights the common enemy. Party banner bearers, trumpet blowers, and band-wagon attendants will help to enliven the campaign parade, but THE PEOPLE WILL BE MORE INTERESTED IN THE DRAMA OF LIFE AND DEATH ACROSS THE SEA, WHERE THE FORCES OF CHRISTIANITY AND DEMOCRACY COMBAT THE HORDES OF WICKED DESPOTISM, WHERE OUR BOYS IN HOLY ALLIANCE PRESS FORWARD ON GERMAN SOIL, WHERE OUR SONS AND BROTHERS DO AND DIE THAT MILITARISM SHALL BE FOREVER BANISHED, WHERE KAISERISM MEETS ITS FATAL BLOW, WHERE BRAVE LITTLE BELGIUM REDEEMS HER HOMES, WHERE BLEEDING FRANCE HURLS BACK THE INVADER, WHERE MURDERED WOMEN AND SLAUGHTERED BARES SLEEP UNDER THE SOIL, WHERE MAIMED CHILDREN AND RAVISHED WIDOWS LOOK TO HEAVEN, WHERE THE GUARDIAN ANGELS OF "LUSITANIA'S" VICTIMS HOVER OVER OUR AVENGING ARMS, WHERE PERSHING AND FOCH AND HAIG STAND AS ONE IN THE SUPREME MOMENT TO STRIKE DOWN FOREVER THE DYNASTY OF HISTORY'S ARCH CONSPIRATOR, WHERE AUTOCRACY MAKES ITS LAST STAND, AND WHERE THE CRESCENT HAS CHALLENGED THE CROSS. THERE, MY FRIENDS, ON THE FIELD OF BATTLE WILL BE THE FOND INTEREST OF OUR PEOPLE. THEY WILL NOT GIVE THE KAISER HIS CHANCE TO SMILE AND TAKE COURAGE IN ANY SWEET NEWS FROM AMERICA THAT HER PEOPLE HAVE REPUDIATED AT THE POLLS THE MEMBERS OF HER WAR CONGRESS—DEMOCRATS OR REPUBLICANS—WHO HAVE THOUGHT RIGHT, VOTED RIGHT, AND TALKED RIGHT IN AMERICA'S CAUSE BEFORE AND DURING THIS WAR.

In their eagerness to prove to the world that politics is, in fact, adjourned, they will not examine closely party marks, but they will treat with harsh contempt candidates who have not thought right, voted right, and talked right, Democrats and Republicans alike. To them they will render so decisive a defeat that all the world shall know that we are behind this war and in it to WIN AN UNCONDITIONAL SURRENDER OF THE ENEMY, TO DICTATE PEACE TERMS THAT WILL BE FAIR TO MANKIND, INCLUDING OUR ENEMY, AND TO GIVE TO OUR CHILDREN AND THEIR CHILDREN A HERITAGE OF UNDISTURBED PEACE AND CHRISTIAN USEFULNESS TO THE END THAT WHEN THEY LIE DOWN TO DIE IT SHALL BE IN THE FIRM SECURITY

THAT WAR HAS BEEN BANISHED FROM OFF THE EARTH, THAT THE FLAG OF OLD GLORY SHALL FOREVER RETAIN HER SPOTLESS SPLENDOR, THAT THE LAND OF LINCOLN HAS NOT PERISHED.

Ah, my friends, away with agitators at home and elsewhere. We are one, united, brave, determined. *"We entered this war for a worthy purpose, and by the grace of God we shall not stop until that purpose is fulfilled."* In the words of the dead poet-patriot, Col. McCrae, we stand together, and we shall not break the faith.

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place; and in the sky
The larks, still bravely singing, fly,
Scarce heard amid the guns below.

We are the dead. Short days ago
We lived, felt dawn, saw sunset glow;
Loved and were loved, and now we lie
In Flanders fields.

Take up our quarrel with the foe;
To you from falling hands we throw
The torch; be yours to hold it high.
If ye break faith with us who die,
We shall not sleep, though poppies grow
In Flanders fields.

War-Revenue Bill.

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 20, 1918.

Mr. HOLLINGSWORTH. Mr. Speaker, under the general leave graciously obtained by the minority leader of the Ways and Means Committee for "everybody to print in the RECORD speeches confined to the bill," after the committee had itself, individually and collectively, in a most careful and exhaustive manner, considered and discussed every possible phase of the subject, I desire only to make one or two observations.

I shall vote for this eight billion war-tax measure as a patriotic duty, on the same theory in which I followed the lead of the President when he asked Congress for a declaration of war. I then said on the floor of the House:

I shall vote for this resolution as a patriotic duty. I shall vote for it in the same spirit with which over a half century ago I offered my young manhood to my country on a similar call from President Lincoln.

I shall vote for it because our present duly elected Chief Magistrate has said to us in effect that he has exhausted all proper means of avoiding war with a nation which happily heretofore has been at peace with us during all our national life. As the President has well said, "It is a most fearful thing to lead this great peaceful people into war"; but his is the responsibility; our duty in a sense is of lesser degree—that common to all official and patriotic citizenship.

I must respond to duty as I understand it—answer the call of the President and stand by him in matters of immediate concern, such as the resolution we are now considering, reserving only matters of conscience and the future exercise of deliberation and judgment on doubtful governmental policies which may or may not arise after the exigencies of the hour shall have passed.

Later a matter of conscience arose with me, when it came to organizing the vast armies needed for the war, and it was proposed to at once abandon the volunteer system of the Republic for the selective-draft system without first giving the citizen of proper age and willing an opportunity to volunteer in defense of his country when attacked. I was much wedded, although in the light of subsequent experience possibly mistaken, to the volunteer system. I had myself been a volunteer in the Civil War. I voted for the amendment authorizing the President to have a division of volunteers organized in this war, distinctly to be enlisted, not drafted, for foreign service, and to be led by a former Commander in Chief of the Army, Theodore Roosevelt. I arranged to go with that division in a capacity in which it was believed I could be useful to my country, possibly more so than in Congress, notwithstanding I was over the draft age; and his letter releasing me after the President, guided as he said, by "experts on both sides of the water," had turned down the proposition of Congress, is still prized by me and laid away for safe-keeping, along with a time-worn but much-valued discharge from the Federal Army of the long ago.

I have no apologies to make for not having supported the selective-draft law in the first instance. Nor do I apologize for the company I was in. Indeed, on the contrary, I quote my own words at the time—April 28, 1917—with satisfaction:

As this discussion draws to a close it has become apparent that the American volunteer system, successful heretofore in all our wars, is to be stricken down. The conscription system is to be substituted in its place as the future military policy of the Republic by influences powerful enough in this House to override the earnest pleadings of our honored Speaker, former Speaker CANNON, the chairmen of both the Military and Naval Committees, the majority leader, Mr. KITCHIN, Dr. FESS, Mr. MONDELL, Mr. CAMPBELL of Kansas, and many other leaders of experience and conscience.

I desire to say a last word on this subject to fellow Members of this House, whose good opinions I value, and to my constituents. If a law favoring conscription and leading to permanent militarism be enacted, I shall stand ready to vote full power to the President to exhaust, if necessary, all the resources of a brave, free people, all the resources of the Government in men and money, to bring the war to a successful conclusion.

Mr. Speaker, I stand by that pledge; I have stood by it every day I have been in the House since it was made, not in blind obstinacy for consistency's sake but because I believe it to be a patriotic duty; not with hopeful scheming for personal popularity and reelection, for I have not been seeking either; nor yet with cringing fear of criticism either from individual enemies or national security leagues, of which we have recently been hearing much complaint in the House. I early made my position known, and have never been annoyed by threats of political extinction.

In speaking in the House on April 25, 1917, I took occasion to say:

Early after the election of the President last fall, induced largely by the cry that "he kept us out of war," I resolved, as a matter of patriotic duty, to stand by his administration in so far as conscience would permit. I resolved in my humble way, waiving all conditions not vital to conscience, to follow his leadership. I have tried in this respect to be true to my country's best interest according to the light God has given me.

In this spirit I voted approval of the ill-starred expeditions into Mexico, although not entirely convinced that the Taft policy was wrong in declaring an embargo on the shipment of arms and ammunition across the Rio Grande and keeping the American Army encamped on the north bank ready to protect and defend American life and property from any and all assailants.

I voted without question for the President's modest recommendations, as originally made, for increasing our Army, relying, like a majority of American voters, upon his campaign promises.

I voted to sustain him in his German diplomatic letter writing, believing it to be in line with a well-considered policy of avoiding actual rupture with a great nation with which we had been at peace all our national life.

I voted approval of his severance of diplomatic relations, although I felt some hesitation, thinking possibly the necessity might have been avoided by a little stricter adherence to our announced policy of neutrality and the exercise of more real diplomacy in dealing with the German Embassy at Washington.

I voted for the authority asked by the President and his advisers to arm American merchant vessels to defend against German submarines, which now on all hands seems to have been a useless waste of patriotism.

I voted, with confessed misgivings as to where it might lead us, but in accordance with my desire to patriotically stand by the President, for the \$7,000,000,000 appropriation asked to carry on the war, the immensity of which is staggering and has no parallel in history.

I have expressed my willingness to vote for this bill giving, as it does, to the President an absolute war power greater than that ever conferred upon king or potentate, saving only that over the life and death of the subject, if only the ideals of the Republic and its founders can be preserved in a land where now none but freemen live.

I criticize no one who differs with me.

I answer only to my own conscience, to my ideas of an overruling Providence, feeling that I am immune from the embittered charge of political self-seeking hurled against Members of the House, not expecting again to be a candidate for Congress and having no ambition except to do my duty as God gives me to see it during this Congress, the most important parliamentary body ever assembled in the history of the world. I shall hope, however, if I live until March 4, 1919, to take home to my constituents a clear conscience and a pair of clean hands. [Applause.]

Frankly, I now confess, in the light of subsequent exposures, that I was grievously mistaken in my then estimate of the German embassy at Washington.

Subsequent revelations are unthinkable in connection with honorable diplomacy.

Yes, Mr. Speaker, I shall vote for this revenue-raising measure with all its drastic hair-raising features, although during its consideration in the House I have favored amendments which if adopted would have rendered it more just and equitable among the people. But we are at war and the President tells us the Government's war chest needs immediate replenishing. It is not a time for hair splitting. I should vote for the measure if involved much larger amounts if satisfied of its necessity for the successful prosecution of the war, just as I have supported all amendments and extensions of the draft law since its policy was adopted by the President and a majority of Congress.

And yet what a tangled mixture of doubtful provisions the bill presents. Outside of its revenue-raising feature it has not had a whole-hearted defender on the floor of the House. It has been likened to an arbitrary seizure of private property and an attempt made to justify it on the same basis as that of the military draft law, and for one I fail to see why there should be

any distinction. Is property more sacred than the blood of our bravest and best citizenship?

Its proportions—\$8,000,000,000 in a single year and by a single act—are staggering and wholly unparalleled in the annals of legislation. The work of the Ways and Means Committee, composed of 23 members selected for their efficiency, willingly, of course, and not like some draftees under the selective-draft law, has been prodigious, months of exclusive and intelligent care and thought have been given to the intricacies of the measure, between two and three thousand of printed pages of testimony have been taken, and the bill itself covers 190 pages and the report 120. Its ramifications seem to cover every conceivable subject of taxation, except, as explained by one member, the gentleman from Ohio [Mr. LONGWORTH], the consumption taxes and these, he gives solemn warning, are in sight.

With such exhaustive care and with a unanimous report of the committee to the House recommending it for passage, average members naturally thought it was only necessary to call the roll on its passage. The House did not need to be told that it was framed along the border line beyond which taxation could not go without endangering the industrial system of the country. That was manifest from the bill itself, and, after I had read the elaborate report of the committee and waded through the fomes of testimony taken, I was quite ready, seeing it would raise the needed revenue, to vote "aye" and take chances on future consumption taxes.

The theory of the bill as presented in the report seems to be that war taxes should be levied upon wealth, luxuries, pleasure, seminecessities, and nonessentials, so that the financial burdens of the war shall bear as lightly as possible upon the masses of the people, those least able to bear such burdens but who of necessity must and do contribute largely to the man power of our armies; and, in this, the committee is certainly entitled to great credit.

And yet, strangest of strange phenomena, not a speech has been made on the bill during this week of discussion without sharp criticism or apology for some of its provisions, and, strangest of all phenomena, members of the committee, signers of the unanimous report thereon, members to whom we average Members of the House are entitled to look to for helpful guidance and information, have been its most determined and unsparing critics.

The minority leader, for example [Mr. FORDNEY], whose keen tariff reasoning I have greatly admired, denounced the measure unsparingly in argument for the absence of any protective tariff schedule, an omission which to my mind seems un-American and certainly un-Republican.

Yet the honorable gentleman signed the report.

Again, the next ranking member of the minority [Mr. MOORE] assailed it with apparent feeling and called loudly for amendments covering the taxation of cotton and the creation of an advisory or assistant board for the President, in all of which I agree with him, although my nearest male relative is the owner of a Mississippi cotton plantation and, like a real southerner, which he is not, is a cotton booster of approved cotton-belt type.

Yet Mr. MOORE signed the report.

So it goes. Criticism of the bill has been all but universal, all along the line of the committee especially, Republicans and Democrats alike, with possibly one notable exception, the genial, fair, always outspoken chairman, whose criticisms or rather apologies for some of its features have been so mild and gracious as to make of his personality a bouquet center for the committee members and also for the whole House. But admirable gentleman as he is and statesman of the old school, he somehow, except in warm cordiality and personal friendliness, does not seem to have heard of the President's adjournment of politics.

He not only signed but made the report to the House.

But, Mr. Speaker, notwithstanding this half-hearted and veiled indorsement of the bill by leading members of the great Ways and Means Committee, I shall vote for it without batting an eye. It is the President's bill. I am not alarmed by the hobgoblin warning of a future consumption tax measure made by that other distinguished member of the committee, the gentleman from Ohio, Mr. LONGWORTH, who in his closing remarks said the construction of this bill was "a mighty good job," and then painted in dark outlines his warning against a possible consumption tax in the future "when we begin to tax coffee and cotton and men's overalls."

But, Mr. Speaker, with a Hooverized inspector is it not possible to find taxable luxuries sufficient to make up a pretty stiff consumption tax list without seriously interfering with the breakfast table of either the John Smith or John D. Rockefeller whom he places on an equality as taxpayers when the fateful day of consumption levies shall come?

Tea and coffee and plain bread are not the only things consumed in fashionable American homes, as no doubt our good Ohio friend knows.

Trust the President. In the winning of this war, let us do as Lincoln advised in the Civil War, go forward and fear not, God and the people are with us.

Voting Record on War Measures.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 24, 1918.

Mr. HAYDEN. Mr. Speaker, in accordance with the permission granted me by unanimous consent I desire to extend my remarks in the RECORD by printing an anonymous advertisement which attacks my voting record on war measures, together with a letter that I have written in regard thereto.

The advertisement and my letter are as follows:

[Advertisement.]

CARL HAYDEN'S WAR RECORD.

Two years ago CARL HAYDEN, Representative in Congress, in a printed letter, dated August 28, 1916, addressed "To the people of Arizona," said:

"I have not hesitated to address the House of Representatives whenever I thought that I could contribute new ideas to the discussion or when the welfare of our State was involved, but I recognize the fact that the legislative record of a Congressman can better be judged by his votes on important bills than by his oratorical efforts."

Following are six important war measures, according to the National Security League. HAYDEN voted wrong five times out of six:

He voted against: Kahn amendment to the Hay Army bill, March 23, 1916. This amendment sought to increase the Regular Army to 178,000, or more nearly approaching the recommendations of the General Staff of the Army.

He voted against: Brandegee amendment to Hay-Chamberlain Army bill, April 18, 1916. This amendment provided for an army of 250,000 as against 140,000.

He voted against: Section 56, providing for a volunteer reserve army wholly under Federal control, April 18, 1916.

He voted against: Motion to recommit naval appropriation bill, June 2, 1916. This motion was designed to instruct an increase in the Navy beyond what was provided in the original bill.

He voted for: Declaration of war against Germany, April 5, 1917.

He voted against: Kahn amendment to conscription act, April 23, 1917. This provided for the raising by conscription of the necessary army to give effect to the declaration of war.

HAYDEN voted for war, but voted against everything with which to fight the war.

He voted against a volunteer army.

He voted against raising the Army by conscription.

He introduced in the House, at the request of Bill Cleary, the I. W. W. leader, a bill to prevent citizens of Arizona from defending their homes. He is against universal military training as now being carried on by the Government.

He voted to exempt his own salary from the income tax.

If you do not believe it, read his speech against conscription in the House on April 15, 1917, and his published letters on universal military training.

The National Security League plays no favorites, but gives the entire congressional vote on the above important war bills. HAYDEN's record is among the worst.

WASHINGTON, D. C., September 24, 1918.

Mr. VERNON L. VAUGHN,

Phoenix, Ariz.

MY DEAR VERNON: I have your letter transmitting an advertisement which appeared in an Arizona newspaper attacking my voting record on war measures. I do not wonder that my friends are disturbed over these charges, because if they were true I should not only be defeated for reelection, but a recall petition should have been circulated against me long ago.

The advertisement first consists of some extracts from a poster issued by the National Security League in New York, certain officers of which have appointed themselves as critics of Congress and the administration. The remainder of the advertisement is made up of unfounded and untruthful charges and comments prepared by some one who did not have the courage to sign his name to what he had written.

I shall take up this advertisement, paragraph by paragraph, giving the truth and the facts in each instance and citing the dates and pages of the CONGRESSIONAL RECORD where my votes can be verified.

"CARL HAYDEN'S WAR RECORD."

Two years ago CARL HAYDEN, Representative in Congress, in a printed letter dated August 28, 1916, addressed "To the people of Arizona," said:

"I have not hesitated to address the House of Representatives whenever I thought that I could contribute new ideas to the discussion or when the welfare of our State was involved, but I recognize the fact that the legislative record of a Congressman can better be judged by his votes on important bills than by his oratorical efforts."

That statement is truer than ever to-day, and I am more than willing that the people of Arizona shall pass judgment upon my votes on the important bills passed during my service in Congress. The more thoroughly my war record is inspected the better satisfied I shall be.

Following are six important war measures, according to the National Security League. Hayden voted wrong five times out of six.

Here is a cheap and flimsy effort to disparage my voting record. The Security League lists eight measures as of importance, two of which are carefully eliminated from the advertisement, because the league approves of my votes on both of them. The first is the McLeMore resolution, to the effect that American citizens should forego their natural, legal, and constitutional rights to travel on the high seas. On March 7, 1916, I voted to kill this resolution by laying it on the table. (CONGRESSIONAL RECORD, p. 3720.) The second is the Cooper embargo amendment to the armed-neutrality bill, which was designed to prohibit to American ships their legal right to carry arms or ammunition in their cargoes. On March 1, 1917, I voted against the Cooper amendment and then voted in favor of the armed-neutrality bill. (CONGRESSIONAL RECORD, pp. 4691, 4692.)

The vote on the McLeMore resolution was: Yeas—Democrats 181, Republicans 93; nays—Democrats 31, Republicans 105. On this vote I supported the President and voted with the Democratic majority. The vote on the Cooper embargo amendment was: Yeas—Democrats 48, Republicans 73; nays—Democrats 169, Republicans 121. My "nay" vote was again in support of the President and with the Democratic majority.

He voted against: Kahn amendment to the Hay Army bill March 23, 1916. This amendment sought to increase the Regular Army to 178,000, or more nearly approaching the recommendations of the General Staff of the Army.

The Kahn amendment proposed, over a year before the declaration of war, to increase the number of men in the Regular Army from 140,000, as provided in the bill, to 220,000—not 178,000, as stated by the Security League.

The vote on this amendment was: Yeas—Democrats 32, Republicans 154; nays—Democrats 176, Republicans 35 (CONGRESSIONAL RECORD, p. 4729). I voted with the Democratic majority against the Kahn amendment because I knew that in time of peace it had never been possible to recruit by voluntary enlistments 220,000 men for the Regular Army. A maximum of 100,000 men had been authorized since 1901, but 87,000 was the largest number that ever could be obtained. Neither the President nor the Secretary of War had asked for such an increase in the Regular Army, and at the time a vote for the Kahn amendment was considered to be an anti-administration vote.

He voted against: Brandegee amendment to the Hay-Chamberlain Army bill April 18, 1916. This amendment provided for an army of 250,000 as against 140,000.

The vote was taken in the House on May 8, 1916, and not on April 18, as the League states. The motion was to concur in the Senate amendment, raising the Regular Army from 140,000 to 250,000 men. Twenty-nine Democrats and 108 Republicans voted "yea"; 170 Democrats and 50 Republicans voted "nay" (CONGRESSIONAL RECORD, p. 7599). For the same reasons that I voted against the Kahn amendment I again voted with the Democratic majority against the Brandegee amendment. Even if the men could have been obtained the increases proposed in the Kahn and Brandegee amendments would have been negligible when compared with the 4,000,000 soldiers that will be sent to France.

He voted against: Section 56, providing for a volunteer reserve army wholly under Federal control, April 18, 1916.

This was a motion to concur in a Senate amendment which authorized the organization of a volunteer force of not exceeding 600 men in each congressional district. The vote was also taken on May 8, 1916, and not on April 18. This amendment was designed to destroy the National Guard, and I received protests against it from members of the First Arizona Infantry. In reality it meant the adoption of the Continental Army scheme under a slightly different guise. You will recall that Mr. Garrison resigned as Secretary of War because the President would not oppose the National Guard and favor his Continental Army plan. I voted with the administration and with the majority to reject this amendment. The vote was—yeas, Democrats 19, Republicans 87; nays, Democrats 176, Republicans 74 (CONGRESSIONAL RECORD, p. 7600). The magnificent record made by the National Guard troops in France has fully justified this vote.

He voted against: Motion to recommit naval appropriation bill, June 2, 1916. This motion was designed to instruct an increase in the Navy beyond what was provided in the original bill.

The annual naval bill as reported by the Democratic majority of the Committee on Naval Affairs increased the appropriations for the Navy \$91,000,000 over the previous bill, and increased the next year's building program by a hundred millions. On

the recommendation of Capt. Sims, now Vice Admiral of the American Fleet, and other naval officers, five battle cruisers were provided for instead of battleships. Mr. Browning, a Republican, moved to recommit the bill with instructions to provide for another battle cruiser and two additional battleships. I voted against this motion, because the immediate construction of five battle cruisers would exhaust all of our building facilities, and for the further reason that the best naval authorities favored battle cruisers as against battleships. The vote on the Browning motion to recommit was—yeas, Democrats 25, Republicans 153; nays, Democrats 171, Republicans 16. (CONGRESSIONAL RECORD, p. 9189.)

In the Senate the naval appropriation bill was amended to provide for a three-year building program, comprising 10 battleships, 6 battle cruisers, a large number of destroyers, and other craft. The President made it known that he favored these changes in the bill, and on August 15, 1916, I voted to concur in the Senate amendment. (CONGRESSIONAL RECORD, p. 12700.) The vote was—yeas, Democrats 133, Republicans 147; nays, Democrats 33, Republicans 15. The National Security League is unfair when it fails to include this last vote in its list, which shows that, in common with the great majority of the Democrats, I supported the President's preparedness program.

In this connection I want to point out that during President Wilson's first administration \$1,141,856,694.25 was actually appropriated for the Navy. I voted for every dollar of that sum, which exceeds by over a hundred million the entire amount appropriated during the previous eight years under Taft and Roosevelt. When war was declared the Navy was ready, and its efficient performance of every duty has shamed into silence the criticisms of the National Security League against the President, the Secretary of the Navy, and the Democratic Congress.

He voted for: Declaration of war against Germany April 5, 1917.

The Los Angeles Times, in an editorial which appeared on September 5, 1918, accuses me of being a pacifist and states that "HAYDEN voted against the declaration of war against Germany." I not only voted for the declaration of war against Germany but I am in favor of vigorously continuing the conflict until the German Army is totally defeated and President Wilson's peace terms are unconditionally accepted by the German people. The vote on the declaration of war was "yeas" Democrats 181, Republicans 189; "nays" Democrats 16, Republicans 32. (CONGRESSIONAL RECORD, pp. 412-413.)

He voted against: Kahn amendment to conscription act April 23, 1917. This provided for the raising by conscription of the necessary army to give effect to the declaration of war.

The Kahn amendment did nothing except to strike out of the selective-draft bill the provision authorizing the President to call for volunteers. The bill as reported by the Committee on Military Affairs provided for the registration of all males between 21 and 40 for the purposes of the draft. It then authorized the President to call for a million volunteers, and provided that if enough men did not volunteer the President was authorized to promptly set the draft machinery in motion. The Kahn amendment directed that the draft be enforced immediately.

I voted against it because I believed that men should first be given a chance to volunteer, and that all the soldiers that it was then planned to send to Europe could be obtained by volunteering. I stated several times on the floor of the House that if an ample number of volunteers could not be obtained that I was perfectly willing to resort to the draft. If the Kahn amendment had been defeated it would not in the slightest degree have prevented the sending of our Army to France, because the original bill provided for the creation of local and district boards, the registration of our man power, and the President was given authority to apply the draft whenever he saw fit.

The Kahn amendment was adopted by the following vote: "Yeas," Democrats 141, Republicans 170; "nays," Democrats 59, Republicans 48. (CONGRESSIONAL RECORD, p. 1555.) The record vote was taken on April 23, not on April 22, as stated by the Security League. On the same day the selective-draft bill passed the House by a vote of 397 to 24, and I voted in favor of its passage. (CONGRESSIONAL RECORD, p. 1557.) The President has since said that he did not blame the Members of Congress who voted against the Kahn amendment, because it had always been the policy of the Government to first call for volunteers, and any man might honestly hesitate about adopting so radical a change.

The unfairness of the Security League is again clearly shown by its failure to mention the final vote on the selective-draft bill. The vote on the Kahn amendment was not the test vote. The 24 Members who voted against the passage of the bill were the

only Members who voted against conscription. I was not one of them.

HAYDEN voted for war, but voted against everything with which to fight the war.

The latter part of that statement is as villainous a libel as was ever uttered against any man in public life. If I had "voted against everything with which to fight the war" I would be a traitor to my country and unfit to live another day. The truth is that I have voted to provide millions of men, billions of dollars, and every other thing necessary to bring this war to a prompt and successful conclusion. No man can point out a single vote of mine since the declaration of war against Germany which would have occasioned one day's delay in carrying on the conflict. Since April 5, 1917, there have been 319 roll calls in the House of Representatives and my name will not be found anywhere in opposition to the prosecution of the war to the uttermost limit of all our resources.

He voted against a volunteer army.

That statement undoubtedly refers to my vote against section 56 of the Hay Army reorganization bill in 1916, but it is misleading in that no mention is made of the fact that the adoption of section 56 would have accomplished the destruction of the National Guard. (See speeches of Congressman CRAIG, of Pennsylvania, McKENZIE, of Illinois, and ANTHONY, of Kansas, Republican members of the Committee on Military Affairs, CONGRESSIONAL RECORD, May 8, 1916, pp. 7592 to 7597.)

He voted against raising the Army by conscription.

I did not. The CONGRESSIONAL RECORD, page 1557, shows that on April 28, 1917, I voted for the first conscription or selective-draft bill. The temporary RECORD, page 10330, also shows that on August 24, 1918, I voted for the second conscription bill, which made all men between the ages of 18 and 45 subject to the draft. My vote for the last draft bill was cheerfully given because the defeat of Russia has made a great American army in France an imperative necessity.

In this connection I want you to know that on all occasions I have voted against exempting Members of Congress from the draft and in favor of a maximum age limit of 45 years. (CONGRESSIONAL RECORD, Apr. 28, 1917; Mondell amendment, p. 1519; Stephens amendment, p. 1522. Aug. 23 and 24, 1918, Gregg amendment, pp. 10273 and 10329.)

He introduced in the House at the request of Bill Cleary, the I. W. W. leader, a bill to prevent citizens of Arizona from defending their homes.

This undoubtedly refers to my bill, H. R. 6544, "to prohibit and punish the interstate deportation of laborers and other persons," not a word of which would prevent any citizen of Arizona from defending his home. The statement that I introduced this measure "at the request of Bill Cleary" is a willful and deliberate lie. Cleary knew absolutely nothing about its preparation or its introduction. The reference to the I. W. W. is a gratuitous insult. On May 4, 1917, I voted for the espionage act (CONGRESSIONAL RECORD, p. 1841), for the violation of which the I. W. W. leaders were recently convicted in Chicago on the fourth count of the indictment. I was glad when the jury found them guilty. A penitentiary is the proper place for men who unlawfully use force or "direct action" to accomplish their purposes. I also voted for the sabotage bill, which the Department of Justice said was necessary to further curb the activities of the I. W. W. (CONGRESSIONAL RECORD, Mar. 6, 1918, p. 3390.)

My anti-deportation bill was introduced to carry out a recommendation made by the President's Mediation Commission and is in harmony with every principle for which the American people are fighting to-day. The President's recent statement denouncing mob action as a blow at the heart of ordered law and humane justice is a complete justification of its purpose, and no man can oppose my bill without at once repudiating the war policy of President Wilson.

He is against universal-military training as now being carried on by the Government.

That statement is utterly false. As soon as the House decided that conscription was necessary to win the war I stated on the floor that I would bow to the will of the majority and voted for the passage of the selective-draft bill (CONGRESSIONAL RECORD, Apr. 28, 1917, pp. 1523, 1557). From that day to this I have advised every person who has written or spoken to me about the draft that they should cheerfully obey the law, because this is everybody's war and each man should do his share whenever called for military service.

He voted to exempt his own salary from the income tax.

That baseless and unfounded charge against the entire membership of Congress was first made by certain New York newspapers. It was completely answered by Hon. WILLIAM R. GREEN, a Republican of Iowa, on December 7 and December 18, 1917 (CONGRESSIONAL RECORD, pp. 113, 536). He conclusively

proved that Congress neither intended nor accomplished the exemption of Representatives and Senators from the income or excess-profits tax. Every contention made by Mr. GREEN was subsequently confirmed by a decision rendered on February 1, 1918, by the Commissioner of Internal Revenue. I voted for the original income-tax law (CONGRESSIONAL RECORD, Mar. 19, 1912, p. 3637). I voted for the war-revenue bill which increased the tax on my own salary. The vote on the war-revenue bill was: "Yeas," Democrats 205, Republicans 120; "Nays," Democrats none, Republicans 76. (CONGRESSIONAL RECORD, May 23, 1917, pp. 2818, 2819.)

If you do not believe it read his speech against conscription in the House on April 15, 1917, and his published letters on universal military training.

Read my speech on the selective-draft bill and in it you will find that I declared conscription to be constitutional, and that I repeatedly said that I favored the prompt resort to the draft wherever all the soldiers needed to win the war could not be immediately obtained by volunteering. That speech was delivered on April 25, 1917, not April 15, and appears on pages 1103 to 1107 of volume 55 of the bound CONGRESSIONAL RECORD.

In the speech I stated that I had never been in favor of conscription in time of peace and that I hoped that German militarism would be so completely crushed that it would be unnecessary to adopt compulsory military service as a permanent policy after the war is over. In my letters on universal military training I have said that to advocate such a system now implied a lack of faith in our ability to defeat Germany.

Everybody is, of course, agreed that if we do not win this war we must begin immediate preparations for the next war, even before the ink of the signatures to the peace treaty is dry. The President is aiming to secure so complete a victory that the whole world can turn its thoughts to something more beneficial than the building of battleships and the maintenance of great armies. When Germany is defeated he wants to be free to propose disarmament and the abolition of peace-time conscription within the League of Nations. He can not do this if the United States has adopted, as a permanent policy, the plan of giving military training to the million Americans who become of age each year, because the rest of the world will be compelled to equal our efforts in that direction.

The managers of the National Security League now insist that Congress shall immediately pass a bill providing for universal military training after the war is over. The President is opposed to the adoption of such legislation, because it will tie his hands at the peace conference. That is the issue between them, and on that issue I stand four-square with Woodrow Wilson.

The National Security League plays no favorites, but gives the entire congressional vote on the above important war bills. HAYDEN's record is among the worst.

The National Security League certainly does play favorites, because out of 435 Members of the House they can find but 47 who voted "right" on all of the eight measures in their list. Of these, 4 are Democrats and 43 are Republicans. I am recorded by the league as voting "wrong" five times out of eight. The President of the United States has set another and a better standard. On March 19, 1918, in his letter to Mr. Davies, Democratic candidate for the Senate in Wisconsin, the President said:

THE McLEMORE RESOLUTION, THE EMBARGO ISSUE, AND THE ARMED-NEUTRALITY MEASURE PRESENTED THE FIRST OPPORTUNITIES TO APPLY THE ACID TEST IN OUR COUNTRY TO DISCLOSE TRUE LOYALTY AND GENUINE AMERICANISM. IT SHOULD ALWAYS BE A SOURCE OF MUCH SATISFACTION THAT ON THESE CRUCIAL PROPOSITIONS YOU PROVED TRUE.

It is a source of much satisfaction to me that I have the President's approval of my votes against the McLemore resolution and the Cooper embargo amendment, and my vote in favor of the armed-neutrality bill. The Commander in Chief of our Army and Navy is in a better position than anyone else to pass judgment upon what constitutes true loyalty and genuine Americanism.

I have no quarrel with any man who opposes me because I am a Democrat and a supporter of the policies of Woodrow Wilson. If he will honestly state that this is the true reason for his opposition I have no right to ask for his support. But I have the utmost contempt for whoever it was that prepared and published the unsigned advertisement that you sent me. In addition to using the camouflaged attack upon the record of the great majority of Congressmen prepared by the National Security League, an organization that can not disguise its repeated attempts to discredit the Wilson administration, the anonymous author of this advertisement proceeds to deliberately falsify other facts about my votes in Congress. I have confidence that such deception will be rebuked by the people of Arizona whenever the truth is made known to them.

It has taken longer than I expected to assemble the facts contained herein. Your letter came when the business of my office, always sufficient to command my entire time and attention, was heavier than usual. I assure you that I have had to put aside other important matters in order that I might write to you as soon as possible.

Yours, very sincerely,

CARL HAYDEN.

**We Are Unanimous to Provide Revenue to Win This War
Soon and Bring Our Boys Home as Victors—With This
View We Accept the Bill With All Its Faults.**

EXTENSION OF REMARKS

OF

HON. RICHARD WAYNE PARKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 20, 1918,

On H. R. 12683—the revenue act of 1918—under general leave granted.

Mr. PARKER of New Jersey. Mr. Speaker, we vote for this bill unanimously, as we did for the new liberty-loan bill. We must have money to win this war.

UNITED STATES BONDS SHOULD BE TAX FREE.

We borrow to the limit and we must have revenue that will assure the payment of our loans, whether principal or interest, beyond all question.

With that view it is to be regretted that the new liberty loan is made subject to surtax when held in large blocks or by aliens.

We must appeal to the large moneyed interests as well as to the people to market such enormous loans. We need the aid of those who can take and hold the bonds in large blocks. United States securities should be sought for at a premium all over the world. The United States can borrow at a less rate if they be unimpeachable and untaxed. We used to issue bonds at 3 per cent; our credit is as good now as then. The first liberty loan at 3½ per cent free of tax now sells at a premium. On the later issue, at 4½ per cent, we had to extend the exemption from surtax to larger holdings. In order to sustain our credit and keep interest low we must exempt all holdings at home and abroad. This will come of necessity. It should be done now.

BORROWING RAISES PRICES—TAXES TEND TO LOWER THEM.

It is almost as vital to hold prices down as to sustain our credit. High prices oppress people with small fixed incomes. They also embarrass the conduct of the war. Higher prices mean larger expense to the United States and more to pay in the bad times when war work ceases, when Europe comes in to compete, and when prices fall.

Inflation puts prices up. The issue of billions of bonds affords liquid assets that lend themselves to credit and inflation. We have also issued about two billions of Federal reserve notes, which are direct inflation, making money plenty and prices higher than they would be even with the war demands. Taxes check this. They make money scarce, and to that extent tend to hold prices down. It is easier to raise revenue during times of inflation than it will be after the war, when prices have fallen.

It is therefore sound policy as far as possible to obtain revenue by taxation rather than by bonds, even though it is hard to do so.

OUR OLD POLICY—TARIFF AND EXCISE DUTIES.

The House has had no say as to the revenue system contained in this bill. The traditional revenue system of the United States was to levy duties on imports and excises on manufactures and sales. The tariff and excise system of the Civil War, in the opinion of many of us, built up our industries and made for progress and prosperity. That system could be applied now. Mr. STERLING, of the Ways and Means Committee, has told the House that in his opinion a 1 per cent duty on all sales would realize three billions of dollars annually, and that 2 per cent would bring in six billions.

During the Civil War there were excise taxes on all manufactures. Some were specific and some ad valorem. The tax at first averaged 2 per cent of the selling price of the goods, but was raised by successive statutes until the average was 6 per cent. The selling price of our manufactured products is fully sixty billions annually. Five per cent of that price would bring in \$3,000,000,000. An increased tariff of 10 per cent on all imports would net half a billion more.

This present revenue bill contains no tariff provisions. It levies no general excises such as above described, though it selects a few articles of luxury for much higher taxes on the manufacturer's sales or on shop sales.

The bill is founded on the Democratic theory that taxes on articles of common use fall altogether on the consumer and chiefly on the poor, although it is a well-known maxim of the modern political economists, whom they follow, that taxes on necessities will in the end be distributed among and fall on the whole community and not merely on the taxpayer. These economists say that if the tax be paid by the laborer, he must and will receive greater wages from the capitalist, while if they fall first on the capitalist they will be partly repaid to him by the purchaser or laborer and that the law of supply and demand will adjust all inequalities.

We are at war. We need money, and quickly. Theories of this sort are not worth discussion now. The excises proposed on luxuries, such as automobiles and jewelry, will produce much-needed revenue. We only note that it is admitted that like excise and tariff duties, may have to be put on other articles in the near future.

Customs duties are collected when the goods are imported. Excises are collected from the monthly account of sales. They are simple and involve no estimates and complicated book-keeping.

STAMP TAXES.

The stamp taxes in the bill are according to Civil War precedent. They should be extended to checks. Two cents on a check is not onerous.

No amendment embodying these views could be offered under the rules of the House. We could only amend the particular provisions as to specific articles named in the bill.

TOBACCO AND LIQUORS.

The excise taxes on tobacco and on wines, beer, and spirits are increased and are in line with precedent. Recent prohibition legislation, however, will take away about a billion of this revenue, which will be a serious loss and must be replaced.

The great and novel characteristic of this revenue scheme is the heavy surtaxes on large incomes and the war or excess-profits tax on corporations.

THE PROGRESSIVE INCOME TAX.

The surtaxes on incomes in this bill are adjusted on the theory that larger incomes should pay a larger rate of tax, and the largest income pays a tax of 75 per cent. Only one-quarter is left. A legal question may arise as to this scheme under the constitutional provision that all duties, imposts, and excises shall be uniform throughout the United States, for in the last income-tax cases, in 1894, the court was equally divided on the question whether an exemption of \$4,000 infringed this provision for uniformity. A practical objection to these surtaxes lies in the uncertainty how far they will induce capitalists to abstain from war work and from risking their means in the temporary war industries of which we are so much in need. The capitalist is timid. Only large profits will overcome his habit of investing in securities that are safe or in real estate that may pay nothing now but will grow in value for his descendants. It is not so easy to catch big incomes, which can be honestly divided up among descendants and settled on them so as to avoid these high surtaxes.

These legal or practical questions as to the scheme of progressive income taxation and supertaxation can only be settled by practical experience or by the courts. A majority of both parties favors the scheme. All over the civilized world at present a consensus of opinion seems to support the plan of commandeering wealth during the war. That plan, if continued indefinitely, would amount to a partial confiscation of all large estates, because the value of a large plant consists in its income and it can not always be divided or disposed of at will. Only experience or the courts can decide whether this plan is lawful or practical. It is proposed by this bill. In the absence of the customs duties and the taxes on sales, which so many call taxes on consumption, the money raised by these great surtaxes is needed, and the few who doubt agree that we will try the experiment, for we want revenue to win this war.

CORPORATIONS—WAR PROFITS AND EXCESS PROFITS.

The tax on corporations takes 80 per cent of their war profits, or a per cent of such profits as are in excess of a fair return, whichever may be the greater. This provision is skillfully drawn and will bring in a large revenue.

It may be doubted, however, whether this tax should not be extended to industrial plants which are not owned by corporations, but by individuals or partnerships. Otherwise it will be easy to dissolve any corporation and put its plants in private hands, so as to escape this corporation tax. This has already

been done in a few cases. We may have to amend the provision by a subsequent statute. We shall certainly have to replace these profit taxes by something else when war ends and war profits cease.

PROGRESSIVE INHERITANCE TAXES.

The estate tax on inheritance is objected to as invading a domain more appropriately exercised by the several States, which have full control over descent and distribution, which the United States have not. This is not an income tax, and if it be a direct tax on lands it can not be laid without being apportioned among the States according to their population. It seems, however, to be constitutional as an excise tax, not on the lands but on the succession thereto; that is, if the varying of rates on estates of different size does not make it objectionable in law for want of uniformity. Certainly, it seems unfair, however, that one of several children should pay a larger tax on what he receives than is paid by an only child who receives much more, but from a smaller estate. The child has the succession and pays the tax, and if the rate be progressive it should be governed by what the beneficiary receives and not by the size of the estate that he takes it from.

This estate tax is not popular. It comes from the principal of what goes to widows and orphans at a time when a business, mill, or farm has to be divided or sold, when money is hard to get and the property may be unsalable.

Many Members wish it were not in the bill. We retain it because we must have revenue and all that can be got.

GENERAL CONCLUSION.

The revenue schemes embodied in this bill are many of them novel, complicated, and indeed uncertain. Tremendous machinery will be needed for collection, with much irritating inquisition into private affairs.

Some of us prefer the old and simple plan of excise and customs. Under the rules we could not even propose such a plan by amendment.

The means proposed are framed by the majority. We may have to vary them if the minority become the majority. But now we welcome these means, or any means to raise money, that will send men and munitions abroad and that will speed and win this awful war at whatever sacrifice. We recognize the patriotism of those who have framed this bill. We support it as a patriotic measure and, with all its faults, the greatest and most heroic money sacrifice that has ever been put in statute form by the representatives of any people.

And we know that rich and poor will gladly suffer any of the hardships attendant upon such a tremendous scheme of taxation, believing that every dollar paid brings nearer the return of peace to the world by the victory of those who defend its civilization from military conquest.

Cotton.

EXTENSION OF REMARKS

OF

HON. WILLIAM F. STEVENSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 23, 1918.

Mr. STEVENSON. Mr. Speaker, there is general talk of cotton-price fixing, said to be necessary because the price has advanced to an extravagant figure. The Washington Post last week asserted editorially that it was far beyond its worth. Let us see if this statement is justified. The last four years before the war began the South made 59,687,538 bales, in the years 1915, 1916, 1917, and 1918 it made 45,343,125, a reduction of 14,344,413 bales, or more than a year's average crop. The world, outside of the United States, has made for the last four years an average of 6,513,000, or for the four years 26,052,000 bales of cotton, and add to this the number of bales raised in the United States for the last four years and we have 71,395,125 bales, all that has been produced in the world in the last four years. The consumption has been at the rate of 20,000,000 bales a year average, or for the four years 80,000,000 bales, which shows that it has exceeded the production by 9,604,875 bales.

Can we expect the world to get cotton as cheap when consumption exceeds production by two and a quarter million bales a year for four years? Again, fertilizers and labor and supplies and stock and machinery have increased in price from 100 to 300 per cent. The price of goods made from cotton has also

increased on an average of 300 per cent, and shall cotton be held down to bare cost of production and less? The price of cotton when the war broke out in 1914 was 13 cents per pound; it is now 33 cents, and there is a proposition to fix it at 25 cents per pound. The following shows the price of cotton goods as of last spring in comparison with 1914, and I am informed they have since advanced:

Comparison of price of cotton goods in 1918 with 1914.

[Figures compiled by former Senator McLaurin, of South Carolina, an expert both in raising and marketing cotton.]

	1914	1918
Standard 27-inch dress gingham.....	\$0.07½	\$0.25
Standard 4-yard sheeting.....	.06	.23
Ten quarter pepperrill sheeting.....	.20	.62½
William Anderson Ivanhoe gingham.....	.10½	.32½
William Simpson standard prints.....	.06	.22½
A. C. A. bedticking.....	.10½	.38½
Cotton blankets, special size and weight.....	.75	2.25
Child's ribbed stockings, per dozen.....	.85	2.25

Certainly it would be unfair to cut the price of cotton down and thus enable the manufacturer to increase his handsome profit. The plea for fixing the price of wheat was to fix such a price as would guarantee a safe return and stimulate production. The fixing of any price under 35 cents will have the opposite tendency in cotton. Let supply and demand regulate it. That was what we were told in 1914, when we were unable to sell cotton for more than 50 per cent of its cost of production. It was our patriotic duty to pocket our loss, and the Government could not guarantee a price or stabilize it or do anything for us. Now that the demands of the world are eating up the crop in sight we are to be called upon to surrender our profit for the good of the cause. If it is so decreed, the South will make the sacrifice and do it gracefully; but it will be poor policy to discourage production of a commodity for which the world is suffering merely to satisfy the clamor that the southern farmer should be stopped from profiteering.

Prohibition.

EXTENSION OF REMARKS

OF

HON. EDWARD VOIGT,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 23, 1918.

On the bill (H. R. 11945) to enable the Secretary of Agriculture to carry out during the fiscal year ending June 30, 1919, the purposes of the act entitled "An act to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products."

Mr. VOIGT. Mr. Speaker, Senate amendment No. 13 to the bill now under consideration provides (1) that after June 30, 1919, and (2) until the end of the war, and (3) after the war until the termination of demobilization, the date of which shall be determined and proclaimed by the President, it shall be unlawful to sell for beverage purposes distilled liquors, beer, wine, or other intoxicating liquor. The amendment also proposes to stop the production of beer and wine after May 1, 1919.

I am opposed to this amendment because I consider it wrong in principle, and also because I consider it superfluous. Under the food bill passed by Congress in August, 1917, the manufacture of distilled liquor during the war was prohibited and the President was given full power to deal with the question of the manufacture and use of beer and wine. Under the power given the President, he issued a proclamation in December, 1917, reducing the alcoholic content of beer to 2½ per cent. Without the passage of this amendment, the President has full power to deal with the question of prohibition. In addition to cutting down the alcoholic content of beer, the brewers were also restricted for the year 1918 to the use of 70 per cent of materials entering into the manufacture of beer in 1917. Recently an order has been issued by the President directing that the manufacture of beer shall cease on December 1, 1918. There is a conflict in the date set by the President for the cessation of the brewing of beer and the date proposed by this amendment. With the law prohibiting the manufacture of distilled liquor and the President's order discontinuing the brewing of beer on December 1 of this year, I am unable to see any real need for the enactment of the legislation now proposed.

I am forced to conclude that this legislation is being crowded by the prohibition forces in order to foist prohibition upon the people of this country. I was one of those who voted against the submission of the prohibition amendment. I was then of the opinion, and am now, that the question of prohibition or no prohibition, is one that should be solved by the people of each State by and for themselves. I deny the right of the people of other States to dictate to the people of my State whether they shall drink whisky, wine, or beer. In my humble judgment, the framers of the Constitution never intended that the matter of the personal habits of the people of the various States should be regulated by the Federal Constitution or Federal law. A prohibition amendment in the Federal Constitution looks to me like a police regulation inserted in a great charter of the people's fundamental political and religious rights.

It will be conceded by everyone that this proposed amendment would be unconstitutional if passed by Congress in times of peace. The only authority that Congress has now for passing this amendment is the war power. The war power is the most sweeping power possessed by Congress. In the exercise of it, Congress has the undoubted right to pass any legislation on any subject which will aid in the effective prosecution of the war. If Congress is of the opinion that prohibition will aid in winning the war, then Congress has a right to enact legislation to give us prohibition during the war. Further than this, Congress, in my judgment, has no power to legislate. This amendment does not only provide for prohibition during the war, but also until the termination of the mobilization; in other words, after we are again at peace, complete prohibition shall continue until our armed forces are returned to civil life. No one can now see how long it will take to demobilize our troops after we are again at peace. I ask in all fairness, is it just that Congress should legislate on the question of prohibition, to be in effect when the country is at peace? Suppose that a small body of our troops should remain for some time in Europe after we are at peace, would that justify taking away the rights of all the States in dealing with the liquor question for themselves? In my judgment, this portion of the amendment which seeks to enact prohibition for the entire country after the termination of the war is unconstitutional, and I should vote against the amendment for that reason alone, if for no other.

I am opposed to prohibition as a matter of principle, but I am not opposed to such reasonable rules and regulations as may be necessary by reason of the condition of war. Legislation already passed and the unlimited power conferred upon the President, seem to me to be all the regulation on the subject that Congress should enact. I am not willing to be a party to prohibition legislation under the guise of a war measure. The present amendment goes far beyond what prohibition legislation is reasonably required for the conduct of the war.

I have received some petitions from people in my district asking me to vote for war prohibition. So far as I can ascertain, the people who signed these petitions are prohibitionists, and they wish to gain their object by connecting up prohibition with the war. The main reason that has been set forth by these petitioners is that we should have prohibition in order to conserve the food and fuel supply. The fact is that we are shipping vast quantities of grain to our allies, which is manufactured into whisky and beer in their countries.

If these petitioners are primarily interested in conserving the food supply, why do they not change the burden of their petitions and pray that the food supply be conserved by discontinuing or limiting the quantity of grain and coal shipped out of the country for distilling and brewing purposes? Is it fair to permit distillers and brewers in allied countries to continue their business and ruin our own? No other country engaged in the war has prohibition. It is well known that our allies supply their troops with wine and beer, and in some cases stronger drink. Is it not a significant fact that the experience of all the European countries engaged in the war has dictated against absolute prohibition? And if our allies are dependent on us for grain and coal, why is it that we must have complete prohibition and they are permitted to receive them from us, to use them for purposes which it is claimed we should not use them for? The fact is, the desire to save materials, fuel, and labor is not the main consideration back of this proposed legislation. The moving cause is the desire of the prohibitionists, under the guise of war necessity, to force their program on the people of this country, not only during the war but God only knows how long thereafter. The country will lose more as a result of disarrangement of business, change of the normal habits of the people, and in discontent than can be gained by this move.

Here is another question: If we must have total prohibition to save food and fuel, why do we permit the export of large

quantities of liquor, in the manufacture of which food and fuel are used? I have heard of no prohibitionist who has insisted that it should be stopped. What becomes of the moral side of the question? Are the prohibitionists willing to export, at the expense of fuel and food, a product for consumption by others which they claim to be harmful?

This measure is going to destroy millions of dollars' worth of property. It is going to ruin financially thousands and thousands of men. It may be argued that their business is only a licensed one; but, waiving technicalities aside, their business has been recognized by law; they have been permitted to invest their money in it; and it is unfair to confiscate their property in the manner attempted by this bill. The brewers and liquor dealers have patriotically acquiesced in every regulation affecting their business which has been deemed necessary as a result of the war condition, just as other business men have done. They have liberally bought liberty bonds and contributed to war charities. To confiscate their property and business after we return to peace conditions is not only a monstrous injustice to them but it is a usurpation of the powers reserved to the States by the Federal Constitution. When France and Switzerland stopped the manufacture of absinth, they compensated those who were financially damaged. When Great Britain puts a liquor dealer out of business, it compensates him. Even under the autocratic Government of the Czar compensation was paid in such cases.

By making this country completely dry we are going to lose directly over a billion dollars in taxes each year. We are also going to lose hundreds of millions in income taxes. In fact, it has been estimated that the loss in revenue to the Government with a condition of total prohibition will run near to \$2,000,000,000 a year. Of course, the Government can get this revenue from other sources, but I have heard no one propose where it is to come from. This is another phase of the subject entitled to serious consideration.

Since the submission of Federal prohibition amendment was voted by Congress by a two-thirds vote, it is very evident to me that this proposed prohibition legislation is going to pass by an overwhelming vote, but I feel in duty bound to record my objection against it.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. ANDREW J. VOLSTEAD,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 27, 1918.

Mr. VOLSTEAD. Mr. Speaker, when this bill was passed this summer it contained a provision fixing the price of wheat at \$2.40 per bushel. The President vetoed it because of that provision. The veto message was disappointing. It was evidently written under a misapprehension of the facts. While I realize that a discussion of the matter can have no immediate effect in restoring the legislation, it may be of value in hastening a correction.

I shall not comment on the President's confident claim that the farmers are satisfied with present prices, nor upon his criticism of the form of the provision in question. That he was in error on both has been clearly pointed out. I pass those by to call attention to his claim that, since we are to have a crop of some 900,000,000 bushels, the increase to \$2.40 per bushel would mean a total increase of \$387,000,000. He bases this on the assumption that this increased price would mean an increase of \$2 per barrel for flour. There is nothing to warrant this assumption. The increase from \$2.20 per bushel for No. 1, the price at that time, to \$2.40 for No. 2 wheat, as provided in the bill, would make a difference of not more than 25 cents per bushel. It takes 4½ bushels of wheat to make a barrel of flour. This number of bushels multiplied by 25 cents makes only \$1.12½, showing that the increase in the price per barrel would not exceed \$1.13. If all of this 900,000,000 bushels were converted into flour, it would mean a total increase of only \$225,000,000 instead of \$387,000,000. This large figure was evidently supplied by some one anxious to help the President make as strong a showing against the increase as possible and to establish that the legislation would impose an enormous burden on the American public. A little reflection would have called to mind that the farmers who raise wheat will need about 90,000,000 bushels for seed next year. The wheat area is about

60,000,000 acres, each acre of which will require a bushel and a half of seed. He would also have thought of the fact that these same farmers support a population of about 20,000,000, and will need for their own consumption about 90,000,000 bushels—enough to make a barrel of flour for each person—making a total of 180,000,000 bushels consumed by them. It is not of much consequence whether the wheat they keep for seed or food is worth one price or another. A little more figuring would have shown that the balance of our population, about 80,000,000, would not consume the rest of the wheat, but only about 360,000,000 bushels, a liberal amount under present conditions. That amount figured at an increase of 25 cents per bushel would only make \$80,000,000 instead of \$387,000,000. The wheat not consumed at home, some 360,000,000 bushels, will be exported and paid for, not only by our allies but also by other nations in need of food. If the bill had not been vetoed, the farmers would have received as an added return from these foreign nations some \$80,000,000. If the President had not been misled but had realized what this increase actually meant, I doubt that the opposition vociferated by labor organizations or others could have induced him to veto the bill. It is true that in the aggregate \$80,000,000 is a large sum, even in these days when a committee of Congress can, without hardly eliciting an expression of surprise, report that in the course of less than a year the War Department has practically wasted \$640,000,000 in an effort to produce aeroplanes; but when you consider that this \$80,000,000 would be paid by 80,000,000 people and be distributed among another 20,000,000, it assumes an entirely different aspect. It then only means an added dollar of expense for each individual a year. Compare this with increases which the administration has sanctioned and it is insignificant.

Barely two years ago the President asked Congress for a law to increase the wages of certain railway employees. An act was passed, and a public commission created by that act reported that this law increased the wages of some 300,000 employees more than \$61,500,000. The indirect effect upon the wages of other railway employees no doubt made the total increase more than twice that figure. Since the railways have been taken over by the Government other and much larger increases have been made, one of \$300,000,000. To pay these increases, freight rates have been greatly increased, many of the rates have been doubled, and passenger rates raised from 2 to 3 cents per mile for travel in a day coach and from 2 to 3½ cents in a sleeper. The express companies have been taken over by the Government. Since then they have been allowed to charge the public rates amounting in the aggregate to more than twenty millions in excess of the old rates. Since the Government took over the telephone and telegraph companies, increases in rates and pay to employees are in contemplation and will no doubt be granted. The Treasury Department reported that since the European war started the profits of individuals and corporations, as shown by income-tax returns, have doubled. As an illustration of these increases let me call your attention to the fact that the four Chicago packers, known as the Beef Trust, made an additional profit last year of some \$140,000,000, a sum almost twice that asked for on behalf of the farmers. I have before me a statement that 2,800,000 railway employees and coal miners have been officially allowed an increase of more than \$755,000,000, and still a measly allowance of \$80,000,000 was denied to the farmers.

The farmers receive their pay for their work in the prices they get for their products. When the Government arbitrarily reduced the price of wheat from more than \$3 per bushel to \$2.20 they were deprived of that much of their wages. Suppose the Government, instead of sanctioning the increases in the pay of labor had demanded a law reducing existing pay a dollar a day, what do you suppose would have happened? And still that is in effect what has happened to the farmers—that is, the northern farmers. Their southern neighbors raising cotton and other southern products have so far not suffered.

There is another grievance that the northern farmers have against this Government affecting the price of his wheat—that is the grading of his grain. Some years ago a demand was made that the National Government establish grades on grain and supervise grading. Congress was finally persuaded to give the Secretary of Agriculture power to fix grades and license inspectors to see that these grades were enforced. The grades have been established, and farmers and others interested in grain have been in trouble ever since. The Secretary evidently started out with the idea that this law gave him the mission to reform not only the method of raising grain but also the grain trade. Instead of fixing the grades to determine the value of the grain actually raised he insists that grain must be raised to meet his grades, and instead of making his standard fit the actual and necessary conditions in the trade he insists that these

conditions must be changed. His whole proceeding has been arbitrary and has ignored the experience of the last half century.

The grades in existence when the Secretary was given his commission divided the ordinary spring wheat into five regular grades, No. 1 hard spring wheat and Nos. 1 to 4 northern spring, making in all five grades. The No. 1 hard served the purpose of a premium grade for especially higher quality grain, so as to insure the farmers who raised such wheat its full value.

These grades had been developed after many years of practical experience and were the result of thorough and painstaking study by State officers of my State and others charged with establishing and applying grain standards. The Secretary, disregarding the experience of others, has in place of these 5 grades prescribed 15 different grades for the ordinary spring wheat, besides 4 subclasses with 5 grades each of other classes of spring wheat, making in all 35 regular grades, besides a number of other subgrades designated otherwise than by numbers. I do not understand how anyone could in all seriousness prescribe as an honest and practical wheat-grading system one that divides the ordinary spring wheat into so many grades. If the person who invented this scheme was required to purchase wheat at an ordinary country elevator during a rush season, he would see how ridiculously impractical and dishonest his grades are. To create all these different grades it was necessary to fix all sorts of hair-splitting distinctions that can not in the nature of things be accurately determined except in a laboratory. Wheat must as a rule be graded by the local buyer on mere inspection, with practically no instruments except a small sieve and a pair of scales. Many of the most important tests that distinguish these different grades can not be determined by either of these instruments. No two men, no matter how competent and experienced, will agree as to the grade of a very large part of the grain offered for sale. The local buyers are, as a rule, required to give bonds to account not only for the quantity of grain they purchase, but also for the grades they pay for. The inevitable consequence is that these buyers must decide every question of doubt against the farmer. The owner of a local elevator is in no better position. Early this fall I was informed that a local buyer near my home lost some \$1,700 because he had purchased wheat at too high a grade. The farmers complain bitterly, and with reason; in the end they are the losers. The difference between the price at Minneapolis and the local elevator, only a little more than a hundred miles distant, was this fall from 30 to 40 cents per bushel, while under the old grades this difference was rarely more than 10 to 15 cents. If these grades actually determine the milling value of the grain, there might be some excuse for insisting on them, but anyone who will look at the market reports will find that on the same day in the same town and for the same grades the millers pay different prices according to the milling value of the grain.

From the standpoint of the grain trade, this scheme is also utterly impractical. The elevators that purchase the wheat from the farmer in the great grain-growing sections have, as a rule, not more than five or six bins in which to store wheat. This makes it necessary to either grade all the wheat into five or six grades, regardless of what grade the wheat happens to be, or grade according to standards and then mix the various grades. In either event the farmer who happens to have a high quality of grain can not hope to get a price higher than the average of the wheat stored in the bin with which his is mixed. It is manifestly unjust to reduce the grade of wheat because it may contain a small mixture of other grain equally valuable for wheat flour. The milling value is what the trade is interested in; still, under the Federal grades, such a mixture reduces the grade and, under present conditions, the price paid for it. Mr. Livingston, of the Agriculture Department, at a public hearing at Indianapolis, in speaking of these grades, said:

Complaints came from all parts of the United States regarding all classes of wheat. The least complaint was in the Pacific Northwest; but complaints have come from all the territory east of the Rocky Mountains, and they come principally from country grain dealers and producers.

He also made the following statement:

We formulated the grades which are now in effect, and when fixed prices and other war measures came in we received complaints from everybody except the millers.

Hoover, the Food Administrator, who buys wheat for the Government, has likewise condemned these grades as unjust.

There is good reason why the millers should be satisfied. They and the terminal elevator companies are the ones who profit. The millers last year, though the crop was very short and their business consequently light, more than doubled their

earnings—this in spite of the fact that labor, fuel, and many other things were unusually high.

Against these grades we have repeatedly and earnestly protested, not only to the bureau in charge of making and enforcing them but also to the Secretary of Agriculture and the President himself, but all without effect. The farmers are not asking an opportunity to profiteer, but only that they be not discriminated against. There is no danger that the farmers will become plutocrats. Only about 14,000 out of more than 6,000,000 have an income large enough so they pay an income tax. There is good reason to believe that one result of this war will be the end of profiteering and the end of great fortunes. The enormous debts that the Government is incurring will make it necessary to take not only all in excess of a reasonable return but to cut to the quick all income in excess of what may be reasonably needed for the comforts and conveniences of life. We make a good beginning along that line in the pending revenue bill. When it becomes a law, as it must, it will pretty well take care of the large profits made since last January. There will not be much left after the Government gets its share. This bill also has in it an inheritance-tax provision under which the Government will take 40 per cent of the larger estates. As many of the States have heavy inheritance taxes on this class of estates, the heirs are likely to get a comparatively small share. Estates below \$50,000 are not taxed. The rates are progressive, increasing as the estates increase in amount.

I understand that the President recently appointed a commission to determine what would be a reasonable price for wheat under present conditions. If newspaper reports are correct, it came to the conclusion that \$2.50 would be fair. It has not been possible to get a copy of that report. Whether this was the finding of the commission or not, I hope the President may reconsider his opposition to the figure fixed by Congress, and that Congress may be willing to relieve us against that overscientific system of grading to which the Secretary of Agriculture appears to be wedded.

EXTENSION OF REMARKS

OF

HON. JOHN T. WATKINS,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 23, 1918.

On the bill (H. R. 11945) entitled "An act to enable the Secretary of Agriculture to carry out, during the fiscal year ending June 30, 1919, the purpose of the act entitled 'An act to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products.'"

Mr. WATKINS. Mr. Speaker, during the consideration of this bill, having for its object the stimulating of agriculture, it is deemed appropriate to call attention to a situation of momentous importance to the agriculturists of a large section of this great country. Last Saturday, the 21st instant, the Associated Press sent out to the country the following special:

NEW YORK, September 21.

The report that a price would be fixed for cotton, and that the Government would also take control of its distribution, caused great excitement and heavy general selling on the cotton market here this morning. October contracts broke to 31.30 at the opening, or \$7 a bale below last night's closing prices and \$29.75 a bale from the high price touched early in the month.

It will be noted that upon this report the price of cotton fell off \$7 a bale overnight. That is, on 11,000,000 bales of cotton there was lost in one night \$77,000,000.

On August 12 the gentleman from Indiana [Mr. Cox] filed a bill (H. R. 12737) to have the price of middling cotton fixed at 15 cents a pound. Cotton at once dropped in price, and the Associated Press report shows that since that time there has been a reduction of \$29.75 a bale in cotton, making on an 11,000,000-bale crop a loss on cotton of \$327,250,000.

If the price of cotton is not abnormally high, it can be readily seen what a disastrous effect this will have upon the cotton growers of the South as well as upon the merchants who have made advances to the farmers, the bankers who have financed the merchants, and to those in all other vocations who are dependent upon cotton for a livelihood. It is particularly unfortunate for the whole country that the people of the South should be forced to bear this loss just as the fourth liberty loan drive is about to begin, as they had looked forward with great satisfaction to the prospect of being able to contribute liberally, and it will be a source of mortification and a sore disappointment to them if they are prevented from doing so on account of the loss of so large an amount of revenue.

The cotton-growing section has undergone this season the most disastrous drought ever known in its history. The farmers planted for a 16,000,000-bale crop. The Government report indicated a 15,000,000-bale crop in July. The last official report fixes the crop at approximately 11,000,000 bales.

The land planted to cotton, the horsepower used, the fertilizer, the wages paid the laborers, the accounts made with the merchants and the bankers were all based on a crop of approximately 16,000,000 bales. Hence it cost the same to mature the crop of 11,000,000 bales as if the crop had matured 16,000,000 bales. The price of cotton was about 30 cents a pound when the crop was estimated at 15,000,000 bales. Fifteen million bales at 30 cents a pound would bring \$2,250,000,000. At 40 cents a pound, 11,000,000 bales would bring only \$2,200,000,000. The difference, or \$50,000,000, is the loss which would be sustained on cotton at 40 cents a pound on an 11,000,000-bale crop, instead of the prevailing price of 30 cents a pound on a 15,000,000-bale crop, as then estimated.

A bill passed Congress and was approved August 10, 1917, fixing the price of food, feeds, fuel, and so forth. It was necessary that this legislation should be passed by Congress before the prices could be fixed by the Executive. Therefore it is just as essential that a law be passed fixing the price of cotton before the President can fix the price of this commodity; hence, the President will not fix a price at which cotton will sell in the open market, but he may designate a price which the Government will pay for that cotton which it is necessary for the Government to purchase. He may also designate to foreign buyers a price which it is thought should be paid. He can regulate the distribution and the handling of cotton during the war. In cooperation with the foreign countries, if it could be so arranged as to reduce the cost of transporting cotton abroad, the price here could be greatly reduced, as it is estimated that the cost of transportation now is ten times as much as when the war began, and the great bulk of the cotton crop is consumed by foreign countries.

The War Industries Board has such extensive powers enabling them to stabilize the handling and distribution as to allow them to go far toward regulating the price of those commodities which are essential for the use of the Government in the conduct of the war. The chairman of the War Industries Board, Mr. Baruch, has had extensive experience in his brokerage business with cotton and no doubt fully understands all the phases of the question bearing upon the value and the fluctuation in the price of cotton, and no doubt will be able and willing to have the matter so adjusted as to cause the least possible injury to the South.

I have uniformly stood by the President in all administration measures, and especially those measures advocated in the conduct of the war, the selective draft, the revenue bills, and all other important matters, and I feel sure that we can trust implicitly in the wisdom and sense of justice of the President to do what is right in this instance.

While I believe a mistake has been made in the report as to the attitude of the President in reference to fixing the price on cotton, still it may not be amiss to refer to the facts to show that if a price is to be fixed it should not be less than the prevailing market price at the time when the market was depressed through the artificial medium of a bill filed in Congress to have the price fixed at 15 cents a pound at a time when the price was ranging close around 40 cents a pound.

I represent an agricultural constituency, and no prouder or more loyal people ever lived than they are. Whenever their interests are jeopardized it is my duty, as it is my pleasure, to come to their rescue, as is evidenced by my interest in the farm-loan law, good roads, rural free delivery routes, parcel post, the exemption of the farmers' unions from the operation of the antitrust laws, and in every instance where their interests are involved. As Members of this House are aware, I remained here to attend a hearing before the Committee on Agriculture, opposing the fixing the price of cotton, after the recess of Congress had been announced last July, and the committee declined to report the bill to fix the price. In spite of this action on the part of the committee at that time, we are now confronted with the bill of the gentleman from Indiana [Mr. Cox] to have the price fixed at 15 cents a pound.

Let us quote from page 8792 of the CONGRESSIONAL RECORD. The gentleman from Indiana [Mr. Cox] says:

Prices have been fixed on many of the great staples of the North, but of the great staple of the South, cotton, the price has not been fixed at all.

He continues:

You gentlemen of the South are willing to stand by and fix the price of wheat of the northern farmer and do nothing at all to get the price fixed on cotton. You are boasting of the fourteen or fifteen millions of bales of cotton that you are raising this year in an unfixed market, the

prices being from 30 to 35 cents a pound. We of the North do not raise cotton, but we have to purchase the finished commodity of raw cotton in the nature of wearing apparel, and we are interested in getting cotton goods as cheaply as possible. You are interested in cheap wheat in the South. You want cheap bread for your cotton planters. We in the North are interested in getting some corresponding benefit in getting cheap cotton goods to wear. You are willing to stand here and see the price of wool fixed. You are willing to stand here and see the price of sugar fixed, the three great staple commodities raised by the farmers of the North, and we are told by both words and action, "Do not touch cotton." There is something sacred about cotton in the South. The cotton planter must be permitted to raise all the cotton he can, sell it at an unfixed price, and because the price of cotton is unfixed—the price of the finished commodity of cotton—even the cheaper grades of calicoes, factory and bleachings, are almost beyond the reach of the poor of both North and South.

All the farmers of the North want is a square deal, and it is the only way that Congress can afford to play this game. Play it equally fair between the North and the South. The same argument as to the necessity of fixing the price of wheat, sugar, and wool produced in the North applies with the same force as to the fixing of the price of cotton in the South. It is unfair, unjust, can not be defended upon any ground, moral or political, to fix the price of things produced in the North and refuse to fix the price of cotton raised in the South. All I ask and all the farmers of the North ask is a square deal. Down to this hour it has been a one-sided affair, and that side has been in favor of the South. My friend from Milwaukee, Mr. STAWSON, said that Congress fixed the price of wheat. What a ridiculous proposition to say that Congress fixed the price of wheat. If I know anything about it, and I think I do, because I have watched it, the President, by Executive order, fixed the price of wheat. If we do not give the farmers some assurance that the price of wheat to them will be increased, I fear very much that we will wake up when it is too late, and find next year that they have not seeded the wheat they did this year.

He raises the question of sectionalism over 50 years after the Civil War is ended. Reduced to penury through four long years of sacrifice in defense of their country, the veterans of the Confederate war returned to their homes to find them devastated. With all lost save honor, they began to reestablish themselves, and overcoming almost insurmountable obstacles the Southland was rehabilitated. Of the few survivors of the "Lost Cause" who returned, there are now serving in the defense of our reunited country 165,000 sons. These 165,000 sons of Confederate veterans are as loyal to the Union as those north of the Mason and Dixon line.

The remarks of the gentleman from Indiana would indicate that the vote on fixing a price on wheat would be along sectional lines. To the contrary, quite a large number of southern Members agree with the gentleman that in view of the high cost of everything, the price fixed on wheat should be correspondingly high. He refers to the fact that cotton goods are high and have to be used by the people of the North. He advocates a high price for wheat, the product of which is bought by the people of the South.

Indiana raises corn, oats, barley, rye, hay, and other feed products which are extensively sold in the South, as well as the stock which is fed and the meat which is made by the use of these feed stuffs. All these commodities are abnormally high; but we do not hear of any effort on the part of the gentleman from Indiana to procure the passage of a law to cut the prices of these commodities in half. If the price of cotton is fixed at an inordinately low price, the people of the cotton-growing States will not be able to buy these commodities unless the price of them is fixed at a correspondingly low figure. In other words, the high price of meat, stock, feed stuffs, and food-stuffs sold to the people of the South by the people of the North, as well as farming implements and nearly everything which is essential for making a crop of cotton, causes the cost of making cotton to be much higher than it was before the price of these commodities doubled and trebled.

While I regard the gentleman from Indiana [Mr. Cox] as one of the ablest Members of this House, he is not familiar with the conditions in the South; does not know the scarcity and high price of labor, of fertilizer, of the cost of transporting and hauling the high-priced commodities which we buy from the North, the additional expense incurred when goods are bought at retail on a credit based on the uncertainty of a crop of cotton.

As an illustration of this uncertainty, I call attention to the fact that the official Government report fixed the crop of cotton at 15,200,000 bales in July, and I incorporate as a part of my remarks a statement from the Bureau of Crop Estimates, showing the crop to be 11,137,000 bales on September 3:

EXHIBIT A.

UNITED STATES DEPARTMENT OF AGRICULTURE.
BUREAU OF CROP ESTIMATES.
Washington, D. C., September 3, 1918, 11 a. m.

The crop reporting board of the Bureau of Crop Estimates of the United States Department of Agriculture estimates from the reports of the correspondents and agents of the bureau that the condition of the cotton crop on August 25 was 55.7 per cent of a normal, as compared with 73.6 on July 25, 1918; 67.8 on August 25, 1917; 61.2 on August 25, 1916; and 70.4, the average on August 25 of the past 10 years.

A condition of 55.7 on August 25 forecasts a yield per acre of about 145.2 pounds and a total production (allowing 1 per cent from planted area for abandonment) of about 11,137,000 bales. That is, the final

outturn will probably be larger or smaller than this amount according as conditions hereafter are better or worse than average conditions. Last year the production was 11,300,254 bales; two years ago, 11,449,930; three years ago, 11,191,820; and four years ago, 10,134,930 bales.

Comparison of conditions by States follows:

NAT C. MURRAY,
Acting Chief of Bureau, Chairman,
G. K. HOLMES,
FRANK ANDREWS,
S. A. JONES,
B. B. HARE,
Crop Reporting Board.

Approved.

D. F. HOUSTON, Secretary.

The War Industries Board has released to-day a statement giving the attitude of the board toward fixing and stabilizing the price of cotton and providing for its distribution, which I incorporate in my remarks as Exhibit B:

EXHIBIT B.

SEPTEMBER 23, 1918.

From the Committee on Public Information. Immediate release.

The War Industries Board in behalf of the cotton and cotton distribution committees, selected by the War Industries Board and approved by the President, authorizes the following:

"On September 14 the President issued a statement in connection with the present cotton situation to the effect that a committee would be appointed to devise methods for (a) broadening the channels of distribution and use of the great stock of low grades now practically unmarketable, (b) eliminating speculation and hoarding, and (c) apportioning the foreign orders; and that it might be a part of this committee's duty to recommend basic prices on cotton, and that if, after investigation, it be found necessary a fair price would be fixed.

"With the approval of the President, the following have been appointed members of this committee, which has been designated the cotton committee: Thomas W. Page, vice chairman United States Tariff Commission, Washington, D. C., chairman; from 1908 to date professor of economics University of Virginia; member of the United States Tariff Board 1911 and 1912; at present member of the Tariff Commission. W. R. Beattie, Greenville, S. C.; president of the Piedmont Manufacturing Co., a large cotton-milling concern, and an executive officer in a group of other cotton mills. R. L. Bennett, Paris, Tex.; a cotton grower and seed breeder, formerly connected with the agricultural colleges of Texas and Arkansas. Ward M. Burgess, Omaha, Neb.; a retail merchant connected with the Burgess-Nash department store and E. M. Smith & Co., of Omaha. Edward Farrum Greene, Boston, Mass.; a cotton spinner and former president of the National Association of Cotton Manufacturers; at present treasurer of the Pacific Mills. J. C. Redmon, St. Matthews, S. C.; a cotton grower and member of the State Legislature of South Carolina. M. P. Sturdivant, Glendora, Miss.; an active cotton grower on a large scale and the executive manager of a cottonseed-oil mill owned and operated by planters. S. W. Weis, New Orleans, La.; a cotton factor and member of the firm of Julius Weis & Co., one of the oldest in the New Orleans cotton trade. D. S. Murph, Department of Agriculture, secretary; specialist in cotton marketing and warehousing in the Bureau of Markets.

"The President further stated that during investigation by the cotton committee, and in order to avoid stagnation, a separate committee would be set up with authority to buy cotton for the use of the United States Government and the allies, at prices to be approved by the President. With the approval of the President, the following have been appointed members of this committee, which has been designated the Committee on Cotton Distribution: Charles J. Brand, United States Department of Agriculture, Washington, D. C., chairman. Mr. Brand has been Chief of the Bureau of Markets of the Department of Agriculture since its establishment, and as such is in charge of all of the cotton-handling and marketing activities of the Government, including the enforcement of the United States cotton-futures act. William L. Clayton, Houston, Tex., member of one of the large and well-known cotton firms in the Southwest. Anderson, Clayton & Co., which operates extensively in Oklahoma and Texas. J. Temple Gwathmey, New York City, member of the firm of George H. McFadden & Bros., cotton merchants, engaged in the conduct of a large domestic and foreign business with headquarters at Philadelphia and New York City, and with branches at many points in the United States and at numerous points in foreign countries. Edward H. Inman, Atlanta, Ga. Mr. Inman was formerly a member of the well-known firm of cotton merchants, Inman, Howard & Inman, of Atlanta, but since the declaration of war he has severed his connection with that firm and has been active as a purchasing agent for the United States Government.

"Messrs. Clayton, Gwathmey, and Iman are disassociating themselves from their business and will remain so disassociated as long as they continue in the service of the Government as members of this committee."

"After full discussion, the cotton committee unanimously passed the following:

"*Resolved*, That the Committee on Cotton Distribution be authorized immediately to allot cotton as to quantity and grade to all domestic and foreign consumers, and that they also be authorized to buy cotton, if and when necessary, for the requirements of the United States and allied Governments."

"*Resolved further*, That the cotton committee feels that this will have an important effect in stabilizing prices, but in the meantime they will keep in close touch with the whole situation with a view of determining the effect of this action and whether price fixing or any other measure will be necessary."

Preparation for and Prosecution of the War.

EXTENSION OF REMARKS

OF

HON. HARVEY HELM,
OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 14, 1918.

Mr. HELM. Mr. Speaker, our country above party always. I can say, "My country, may it always be right; but, right or wrong, my country"; and I can say, "May my party always be right," but I can not say, "My party, right or wrong." The sole and only question now is how to win the war as quickly as possible with as little loss of life as possible and the least possible expense on the basis of a just and permanent peace. This is the supreme aim of the administration and of the Congress.

On the issue of bread on the table or grain for the breweries and the distilleries, the Congress went on record for bread and war-time prohibition, effective July 1, 1919, which closes this issue.

Every department of the Government is functioning efficiently and with full steam ahead. We have 2,000,000 soldiers in France; the best fed, best clothed, the best paid, and the best cared-for soldiers the world has ever seen; provisioned three months ahead, and all done in 18 months; and, furthermore, they constitute the best fighting troops to-day on the battle fields of France, performing prodigious deeds of valor.

The Navy is working with the precision of a Corliss engine.

The Treasury Department is financing the world.

The Department of Justice is weeding out the profiteers and prosecuting the grafters, arresting the disloyal and rounding up the spies.

The Department of Commerce is watching carefully and expanding our domestic and overseas trade. New American enterprises are being born every day, furnishing a larger home market for our raw material. The American dollar is a household word the world over.

The Department of the Interior is taking steps to locate the returning disabled soldiers and sailors on the best vacant lands obtainable and teaching them a profitable trade; establishing sanitariums in which to restore to health such soldiers as are afflicted with disease contracted in the service.

The Post Office Department is handling the enormous increased volume of mail with the least possible delay.

The Department of Agriculture has and is stimulating production, with the result that we are virtually feeding the entire world, and every industrious, alert farmer is making money.

The Department of Labor has successfully settled, or averted, every strike that has threatened to interfere with the output of the mines, factories, or munition plants. It has organized an army of laborers that harvested the wheat crop in the face of the alarming scarcity of farm labor, and is endeavoring to supply every section with needed help.

The Department of State, with masterly skill, has lined up the entire Western Hemisphere with the allies, with the exception of Mexico, which is now beginning to manifest a more friendly attitude.

The President's voice is the voice of the allied world against the tyranny, the ruthless frightfulness, and brute force of the Imperial German Government.

The occupation of the croakers and the critics, so much in evidence in the beginning, is gone.

The Army in the field is measuring up to the American standard; in fact, has set a newer and higher mark for the veteran

armies of Europe. The results amaze the allies. Godspeed the glorious day when they may come marching home victorious to gladden each waiting heart!

Reviewing the four years of constructive peace legislation and the 18 months of preparation for and prosecution of the war by the present administration, no government can present a favorable comparison, much less a parallel, compelled, as we are, to travel 3,000 miles over an ocean infested with the treacherous submarine.

For my part I do not consider it the proper time to discuss post bellum projects; there remains much hard fighting to be done. The house is on fire; it is no time to discuss repairs or the color of the paint on the new structure—put the fire out and then plan.

The party that depends on pro-German and pacifist sentiment does not deserve to win. Every post of duty requires 100 per cent American on guard. Every change in the administration of any of our enemy governments is heralded as tokens of weakness. Let the result of this election convey no such comfort to them.

The administration by its vigorous prosecution of the profiteers who seek to defraud the Government is determined that there shall be no Russian grafters in the American Army. On the contrary, it is striving to get value received for every dollar raised by taxation and by the sale of bonds.

Be it said to the everlasting credit and praise of the people in mass that they are practicing self-denial that the food and money may go to the support of the Army. They realize that the soldier who falls on the field of battle has given his all, while they are lending only a part.

Congress has provided insurance for disability or loss of life of the soldiers and sailors; allotments and allowances for dependents, or the family, as soon as he enters the service and while he is serving his country, instead of no allotment and allowance while he serves, and a possible pension after the war.

Does such legislation meet with your approval or with your condemnation? Does it mean defeat or reelection of the Democratic majority that proposed and is responsible for its enactment?

It would be as reasonable to expect one religious denomination, zealous of its doctrines, to conduct a revival for a different religious denomination equally zealous of its creed, as to expect a Republican Congress to enthusiastically support a Democratic administration.

Taxes to support the Army have been levied equitably, and heavy taxes have been placed on those best able to pay them—that is, on the profiteers and millionaires—while well-paid labor has not sought to be relieved from its just share of its expenses.

Russia is a horrible example of a peace made in Germany.

Deploping the heavy toll and loss of life that the war has imposed, as well as all wars that have and will continue to impose so long as nations go to war, we have nevertheless learned valuable lessons of thrift and economy.

The Young Men's Christian Association and other like organizations have made the whole world kin and lowered the barriers of class and creed.

The United States stands out before the nations of the world. Its institutions will become world standards. The war can even now salute democracy. Our 2,000 ships will carry the commerce of the world and ply every ocean trade lane. As good roads and trunk lines enhance the value of lands, so will our ships increase the value of our products and carry them to the remotest corner of the globe.

The doctrine that force makes right will be overthrown and an era of equal rights and justice will be ushered in. The end will come as a farewell—a long farewell—to German world-wide empire and international lawlessness.

The work of Congress finds its fullest fruition in the advancing and victorious American Army on the battle fields of France. If the situation can not be improved, then be certain it is not injured by rebuking those who laid the groundwork on which this marvelous fighting force depends and relies. Do not disrupt the teamwork of the administration, the Congress, and the Army. Would you recall Pershing or any officer under his command? If not, why defeat the Democratic majority that is upholding the President with needed legislation, every soldier and every dollar asked for? Every instrument of warfare that Congress could supply has been placed at his command.

All of the legislation that has created and organized the present Army and Navy has been brought forward and presented to the Congress by the Democratic majority, and to it belongs the credit of proposing the war-time constructive legislation that has given us the efficient Army and Navy that is winning the war.

I want to direct and, if possible, arrest the attention of that great body of loyal, true Americans affiliating with the Republican Party, who put country above party, who have sons in the Army, and who have indorsed and approved the conduct and management of the war by enthusiastically subscribing for liberty bonds, to the fact that the Army of the United States has snatched victory from defeat that when the French and English were being driven back to the Channel and to Paris it was the American divisions that threw themselves across the paths of the on-rushing Huns, stopped, and drove them back. From that hour until this the world has recognized the valor and training of the American soldier; and I assert that the organization, equipment, and training of this Army is the work of the administration and the Congress that initiated and put into actual operation the legislation from whence sprang the American Army that is now winning such glorious victories over the greatest fighting machine the world has ever seen. These are facts that the world admits, and yet the only critics and detractors of those on whom the responsibility of bringing forward the legislation, perfecting the organization, supplying the equipment, and directing the training of this Army that has accomplished such marvelous achievements in so short a period of time are a bunch of a few politicians who hunger and thirst after Federal offices and political power.

As stated in the beginning, the one question for the voter in this election, be he Democrat or Republican, who is not a pro-German or a pacifist is, Is the war progressing satisfactorily? Is it being waged efficiently so it will be brought to a close as soon as possible on a just and permanent peace basis, with the least loss of life and treasure? If so, every patriotic American citizen will cast a vote of confidence and not a vote of censure, drawing a sponge over the errors and open an account of new credit for those who in this crisis have done well.

EXTENSION OF REMARKS
OF
HON. CORDELL HULL,
OF TENNESSEE.
IN THE HOUSE OF REPRESENTATIVES,
Friday, September 27, 1918.

Mr. HULL of Tennessee. Mr. Speaker, from the standpoint of patriotism and intelligent self-interest, the property and life of every citizen should be at the disposal of the Government in time of war. Justice and liberty are not mere names; they are things worth having, worth fighting for, worth dying for. These inalienable rights were established in this country at the cost of untold privations and hardships, sacrifices, and self-denial. The people of this generation are ready to defend and maintain them against the infamous aggressions of German militarism "to the last farthing of money, the last ounce of strength, the last drop of blood." The war now being waged to this end is not a war of the United States Government within itself, but is the war of every citizen, whether he be exerting his fullest capacity as a soldier on the battle field, as a sailor on the high seas, as a workman in the factory, in the field, or in the mine. Our soldiers and sailors can not fight our battles at the front unless provided with foodstuffs, clothing, munitions, and other military supplies. These must be produced by the civilian population at home as the war progresses. The Government purchases them and in turn makes suitable and judicious distribution throughout the Army and Navy. The result is that the war means a continuous increase of expenditure, debt, and taxation. Our Government, which is alike the government of every citizen, can only look to the people for the means with which to make payments of these huge war expenditures. Taxation and loans are the only feasible methods of government war financing.

It is a matter of extreme gratification that the ablest statesmen, financiers, and economists the world over agree that the Government of the United States has thus far financed the war on lines far sounder and wiser than any other nation. The executive and legislative branches have promptly and patriotically met and solved every problem relating to the financing of the war in a most constructive way. The great statesmen and financiers of Europe can bestow on the heads of our Government no higher praise than the approval and admiration which they have freely expressed with respect to our policies of war finance. The political minority in this country, whatever the grounds of its opposition now or hereafter, has in this great emergency, in part by voice or vote, and in part by default of spirit frankly

to suggest or ability to offer improved or more effectual methods given even stronger approval.

It is a great compliment to the wisdom, statesmanship, and foresight of this administration that the political minority, with all its astuteness and the disposition of some of its members to criticize, has been wholly unable to offer a single important substitute method of superior merit, but has been satisfied to support the constructive methods and policies of the administration. This fact, as well as the record, attests the ability of those now in charge of the Government to administer and direct its affairs wisely, ably, and soundly both in peace and in war. Upon what ground or remote pretext, therefore, could the patriotic citizen, or even the narrow partisan, ask for a change of the political complexion of either the executive or the legislative branch of the Government during this period of supreme crisis? Such course would be contrary to practice and experience in all wars. In view of the ability and success with which the war is being prosecuted a political change in Congress could not be for the better and would probably be considerably for the worse. Why not "let well enough alone"?

Lincoln requested a Congress of his own political faith as the most efficient agency for the prosecution of the Civil War, and the people gave it to him. McKinley made a similar request upon like grounds during the Spanish-American War, and the people readily complied. To reverse this time-honored policy now would be construed in enemy countries as a direct assault upon the Commander in Chief of the Army and the Navy, the President of the United States, and our allies would likely discern any change of the directors of this policy, which has substantially aided them, given them the highest moral heart, an evidence that the German propaganda was still busy here, as it has been in other countries, by cunning methods doing its utmost to promote confusion of council and disintegration of that national unity which has been cemented by the will of the whole people to fight the war to a victorious end.

When the United States entered the war, on April 6, 1917, Congress proceeded with the work of formulating a suitable war-revenue policy. After a careful consideration of the fundamental principles of taxation, the consensus of opinion was that an equitable and comprehensive war tax should be laid principally upon wealth, luxury, pleasure, and seminecessities. With a basis of taxation thus established on lines broad and sound at the beginning of the war, the tax could be increased and extended as the war progressed and our revenue needs increased and after business had adjusted itself to such new system of taxation, without disturbance of our economic conditions and without the necessity later of readjusting or patching up our tax structure. In adopting this view Congress was actuated by the three controlling considerations of adequate revenue, equity in the tax levy, and ability to pay. This general policy was written into the war-revenue act of 1917 and is further conspicuously reflected in the proposed war-revenue act of 1918. The war taxation embraced in these two measures is recognized by economists and financiers everywhere as more nearly meeting all the requirements of soundness and scientific accuracy as to its scope, nature, and extent than the war-revenue system of any other nation.

Congress has been guided by the further principle of wise war finance, nowhere controverted, to the effect that during the war the Government should levy the largest amount of taxes that can be imposed without materially injuring business or seriously handicapping the normal course and development of any essential industry. This policy, rather than any arbitrary rule fixing the proportion of taxes and bonds that should be utilized for war purposes, has been adopted and generally acquiesced in. To pay in the largest measure as we go maintains our credit, prevents many unsound economic conditions, and in the end greatly reduces the amount of our war burdens, which would otherwise later rest heavily upon the taxpayers. Our huge war expenditures are being contracted in inflated prices of near 100 per cent, and to pay them in similar inflated values will result in a tremendous saving to the American people. To illustrate further, the proceeds of a mule, or of any staple commodity, will now pay off as large an amount of war expenditures as it will be possible with the proceeds of two mules or two such commodities to pay on our bonded war debt during the years following the war when values have declined to normal. Another important consideration in this connection is the fact that during the war profits are swollen, production is near its maximum, business conditions are more or less artificial, and the people generally are more able to pay large taxes with far less injury or deprivation than at any other time. A tax levy of \$8,000,000,000 now only amounts in buying power to a tax levy of \$4,000,000,000 under normal conditions before the war. This policy of war taxation will, therefore, avoid the hard and heavy tax levies that would otherwise

be required in after years for the payment of the interest and principal of war debt. The adoption of this course will also place the United States in the strongest possible attitude to meet competition in foreign trade and to secure large, favorable trade balances with which to pay off our public debt after the war.

Mr. Speaker, many people have the erroneous idea that the tariff offers an inexhaustible source of revenue to be tapped at will by the Federal Government and capable of meeting the most extraordinary expenditures. There never was a more erroneous impression. Congress seemed to entertain this view during the first three years of the Civil War, with the result that the largest obtainable yield of tariff taxes did not average \$70,000,000 per annum. In 1863, Secretary of the Treasury Chase announced that customs revenues were inadequate and unreliable in time of war. It was not until 1864 that the necessity for levying real revenue-producing taxes from internal sources dawned upon Congress. The result was that no substantial war-tax levies were made or realized until 1864. The inevitable outcome was that the Government was obliged to finance itself from the proceeds of bonds issued at high rates of interest and tax free, and from greenbacks. There was widespread inflation of currency and credit. The ultimate cost of the war to the taxpayers was almost double what it would have been under the policy of "pay as you go."

The largest customhouse yield of revenue in the history of the Government was \$333,000,000. It is true that our imports have apparently increased considerably during the present war, yet at least one-half of this increase is clearly due to mere increase of values and not of quantity. Besides, the chief imports are foodstuffs and crude raw materials, most of which are kept on the free list at all times by all nations. Of our imports for the year ending June, 1918, valued at \$2,946,000,000, crude raw materials constituted \$1,227,000,000 and foodstuffs \$750,000,000. The value of manufactures imported for this period was \$394,000,000—and it is to these we look for revenue, in the main—and they are now no greater than the value of those imported for a similar period under the Payne tariff law, while the quantity would not be more than one-half. We should also keep in mind the fact that when each country entered the war, or soon afterwards, all foodstuffs and essential raw materials that were not already on the free list were promptly placed there, and in addition, embargoes were imposed against other large classes of imports as well as exports.

For any person to attempt to magnify customs revenue possibilities now, other than somewhat after the English system, and to minimize the necessity for large internal taxes, is the sheerest nonsense, hypocrisy, and unadulated partisan demagoguery. Some gentleman refers to the fact that England now derives \$472,000,000 at the customhouse. This is true, but it is also true that of this sum \$412,000,000 comes from tea, sugar, coffee, and tobacco. It must be clear from universal experience that the United States can not under normal conditions after the war expect a maximum tariff tax levy of more than \$500,000,000 per annum, while our after-war expenditures for a few years will approach \$4,000,000,000, provided the war ends in the autumn of 1919.

The United States is in a far stronger attitude to bear the enormous burdens of war than any other country. Our banking resources are near \$40,000,000,000. Our home production of unexceeded quantities of coal, oil, gas, lead, iron, steel, cotton, copper, corn, wheat, and most other products and supplies necessary for the prosecution of the war, as well as our self-sustenance, place us in a position of commanding advantage. The best part of industrial France is occupied by the enemy. England must import the chief portion of her raw materials, with the result that the balance of trade against her for this fiscal year will probably be \$4,000,000,000. Since the outbreak of the war the balance of trade against England amounts to \$8,500,000,000, while the balance of trade in favor of the United States amounts to more than \$9,800,000,000. It is now \$3,000,000,000 annually.

We are already sure of a great merchant marine, an unprecedented gold reserve, and adequate foreign banking facilities. We will have available our immense resources, including raw materials, to be manufactured and sold everywhere when the war closes. Europe will be greatly deficient in raw materials. The shelves of the business houses in all European and far-eastern countries will be empty, and if our manufacturers are well stocked with goods they should have enormous foreign sales after the close of the war.

The United States has now gone from third to first place as exporter of manufactured goods, or from a valuation of \$1,099,000,000 to \$4,019,000,000. Our growing export trade will retain our gold at home. Prior to our entry into the war last year we

had paid \$3,000,000,000 of our indebtedness to Europe and loaned \$3,000,000,000 over there.

England has increased her tax levy from less than \$1,000,000,000 before the war to more than \$4,000,000,000 at present. Her total expenditures for four years of war have been \$39,650,000,000. Since England has only half our wealth and population this would correspond to an expenditure of \$80,000,000,000 by the United States; in other words, this Nation could expend the latter amount and still be no deeper involved than England was on August 4, 1918.

Mr. Speaker, when the United States entered the war on April 6, 1917, our ordinary receipts were \$1,118,174,000 for the fiscal year ending June 30, 1917. From April 6 to June 30 of that year the Government realized \$1,466,335,000 from the sale of the first liberty bonds. The expenditures during this period were \$1,218,502,000. Of this amount loans to our allies comprised \$885,000,000. This sum added to our other war expenditures for the same period shows a total of \$945,000,000, apart from normal expenditures from April 6 to June 30, 1917. For the next fiscal year ending June 30, 1918, the total ordinary and war expenditures of the Government were \$12,696,702,000. Of this amount \$4,738,029,000 were loaned to the allies, which would leave remaining a total expenditure of the Government for that fiscal year of \$7,958,673,000. This latter sum represents our normal and war expenditures, less loans to the allies.

The aggregate amount of these entire annual expenditures were met by revenue receipts of all kinds amounting to \$3,664,581,000, by proceeds of the first, second, and third liberty loans of \$7,566,034,000, and by war-savings certificates and thrift stamps of \$307,019,000, or a grand total of \$11,537,634,000, to which was added a sufficient amount of the proceeds of certificates of indebtedness to meet the total expenditures as stated. Without enumerating in detail the sources of receipts and the expenditures for July and August, 1918, I may say that the total expenditures of the Government for all purposes since April 6, 1917, to August 31, 1918, aggregate \$17,329,000,000, while the total receipts from revenues, liberty loan, and war-savings sources for the same period aggregate \$15,699,766,000. I may add that the total revenue receipts for this period were \$5,017,109,000, total liberty loan proceeds \$9,961,559,000, and total proceeds of war savings and thrift stamps \$641,097,000. The total loans to the allies for the same period, April 6, 1917, to August 31, 1918, were \$6,245,764,000. Our estimated total expenditures for the entire fiscal year ending June 30, 1919, is \$24,000,000,000 or more. Our estimated revenue receipts for this period are \$8,000,000,000. The remaining \$16,000,000,000 or more will have to be met by the proceeds of liberty loans, war savings certificates and stamps, and certificates of indebtedness. I append to my remarks detailed estimates of revenue yield from the various classes of taxes. I also add a table showing the income-tax rates.

Next to fighting in the front lines there is no better test of patriotism than the willingness of the citizen cheerfully to pay the maximum amount of taxes for the support of the Government in its prosecution of the war. On the other hand, the lack, or the degrees, of patriotism can no more quickly be detected than in the person who complains of, or resents, the payment of his fair share of a necessarily high war-tax levy.

Occasionally a very narrow partisan Republican announces his dissatisfaction with the present and proposed system of war taxes and intimates that he would have imposed them on a materially different basis. In the light of the plain facts and unmistakable conditions, this attitude is a mere pretense to oppose any substantial amount of war taxation unless the monstrous method of relieving those able to pay and heaping these huge taxes on the middle and poorer classes should be followed. This is the only alternative. No patriotic citizen with the most hide-bound political proclivities should be allowed to play politics in the manner just stated without a complete exposure of his political patriotism and his entire willingness to place politics above every consideration of patriotic obligation.

Mr. Speaker, the most surprising, disappointing, and unpatriotic utterances I have heard on the floor of the House during the war have been made by a few individuals, partisan Republicans, in a pretended effort to make it appear that the war-tax burdens are sectional. These gentlemen are willing by the most strenuous and sensational assertions to divert the attention of the people from their war duties and war obligations and play up whatever political prejudices it may be possible to arouse by a base, unmanly, and unpatriotic appeal to sectionalism. This political propaganda arises in connection with the operation of the income and excess-profits tax measures and is based on a theory which ignores every sound principle of taxation and every economic fact. It flies in the face of the sixteenth amendment to the Constitution, which abrogated the impossible rule of im-

posing income taxation by apportionment. The effect of this political and sectional by-play under the operation of a tax law would be to impose a head tax, so that the wealthiest individual would pay no more than the pauper, as a rule. This baseless theory ignores the real question of where income is produced and assumes that it is produced where it happens to be returned for taxation.

The sophistry of this whole matter has been so completely exposed by that great stand-pat Republican statesman, Hon. Elihu Root, in his letter to State Senator Davenport on February 17, 1910, urging the New York Legislature to ratify the income-tax amendment to the Constitution, that I read it as the most complete and crushing reply to every little sectional politician who sticks his head up in any part of the country. Mr. Root asserted:

It is said that a very large part of any income tax under the amendment would be paid by citizens of New York. That is undoubtedly true, but there is all the more reason why our legislature should take special care to exclude every narrow and selfish motive from influence upon its action and should consider the proposal in a spirit of broad national patriotism and should act upon it for the best interests of the whole country.

The main reason why the citizens of New York will pay so large a part of the tax is that New York City is the chief financial and commercial center of a great country, with vast resources and industrial activity. For many years Americans engaged in developing the wealth of all parts of the country have been going to New York to secure capital and market their securities and to buy their supplies. Thousands of men who have amassed fortunes in all sorts of enterprises in other States have gone to New York to live, because they like the life of the city or because their distant enterprises require representation at the financial center. The incomes of New York are in a great measure derived from the country at large. A continual stream of wealth sets toward the great city from the mines and manufactories and railroads outside of New York. The United States is no longer a mere group of separate communities embraced in a political union; it has become a product of organic growth, a vast industrial organization covering and including the whole country; and the relation of New York City to the whole organization of which it is a part is the great source of her wealth and the chief reason why her citizens will pay so great a part of an income tax. We have the wealth because behind the city stands the country. We ought to be willing to share the burdens of the National Government in the same proportion in which we share its benefits.

This broad, sound, and patriotic statement of Senator Root applies in almost equal measure to such great industrial and financial centers as Philadelphia, Chicago, and Boston.

Mr. Speaker, to one familiar with our present tax laws little difficulty will be experienced in grasping and readily understanding this bill which has passed the House. The bill in its chief effects does four things: First, in a general way it practically doubles most of the existing tax rates; second, inserts a war-profits provision in the alternative with the present excess-profits law; third, codifies the income and estate tax provisions; fourth, adds a so-called luxury schedule of taxes. There are, of course, minor administrative changes or insertions here and there in the bill, as well as certain other additional or modifying provisions, but which are not generally of a fundamental nature. It will be seen that the language of the income and estate tax statutes is retained almost entirely intact.

Every member of the Committee on Ways and Means knows that it was the intention and controlling motive of the committee to apportion taxes equitably in all its work of drafting and reporting the present revenue measure, and that not a serious hint or suggestion calculated to help one section or hurt another was heard. The bill also contains many safeguards against any inequities that may arise from its operation with respect to individual taxpayers. The income tax comes first in the bill. Most civilized countries now have this tax. Its underlying principle is that every citizen should pay in proportion to his ability, and that net income is the best measure of such ability. The income tax, with the excess-profits tax superimposed on it as a basis, is the backbone of our financial system, as it is in England, and as the income tax alone must be in both countries in the future.

Many complain of the complicated nature of an income-tax law. Equity and simplicity should be the prime requisites of any tax law. To secure equity it is necessary, on account of our complicated business conditions, to insert numerous saving provisions, exceptions, and qualifications in the general provisions of the law. These produce the principal complications complained of. The taxpayer must realize, therefore, that in the endeavor of Congress to make his tax burdens equitable it has proceeded as far as possible to secure the maximum of equity with the minimum of complexity, notwithstanding the fact that in this endeavor complexities increase as the equities increase.

It is estimated that 615,000 individuals had a net income of \$4,000 or over for the year 1917, and 2,440,000 had incomes of \$1,000 and \$2,000 to \$4,000, according to whether single or married. As showing the ability of the country to pay taxes, the total aggregate net income returned by individuals and cor-

porations subject to income tax for the years 1915-1917 and the estimated amount for 1918 is near \$45,000,000,000. From this entire amount the Government has derived in income and excess-profits taxes thus far less than \$3,500,000,000. The added income and excess-profits tax levy for 1918, estimated at \$5,500,000,000, would make a combined levy from these sources of \$9,000,000,000 for these four years, leaving to the taxpayers of the country \$36,000,000,000 net profit. To the person who is willing to keep an account of his gross profits and the expenses of producing them, a five-minute study of an income-tax return will enable him to fill it out without delay or inconvenience. There is scarcely any material change in the provisions of the present income tax law, save of a minor administrative character here and there. The marked increase in the rates is the distinguishing feature of this part of the new bill. The exemptions and deductions are virtually the same as existing law. The normal tax on individuals is fixed at 12 per cent, with a proviso that the rate of 6 per cent shall apply to all taxable incomes up to \$4,000.

A married person, for example, with a net income of \$6,000 would pay 6 per cent normal tax on \$4,000 and 2 per cent supertax on the excess over \$5,000. Corporations are subjected to the same normal rate of 12 per cent as to all profits distributed as dividends or paid on indebtedness or used to purchase liberty bonds. On the amount retained in the corporate business the rate is 18 per cent. This is in lieu of the so-called Jones amendment in the present law relating to the taxation of undistributed profits. Corporations are allowed deductions for all interest on indebtedness under the proposed change. Losses in transactions entered into for profit, whether constituting a business or not, are now made deductible. Certain specific allowances for amortization of buildings, machinery, and so forth, erected for war purposes, directly or indirectly, but which will be of little or no use after the war, are proposed. Domestic corporations are allowed a deduction of \$2,000 under a new provision of the bill. It is clear that the income and excess or war profits levy, large as it is proposed, will leave business a much higher level of profits than the normal prewar level. This will enable business concerns to deal with high-priced inventories, the high price of labor, and to grow and expand.

Mr. Speaker, the war-profits and excess-profits provision is based upon the view, now universally agreed to, that it is entirely justifiable for the Government to take the chief portion of abnormal profits arising during the war for the payment of war expenditures. Some 14 nations have enacted such measures, and they are cheerfully acquiesced in by all citizens. It is true that any excess or war profits act that may be devised will necessarily be lacking in equity and scientific accuracy in many individual cases. The principal feature of equity is that no citizen should desire or be permitted to make and keep abnormal or colossal profits out of this awful war, but that most of the excess above normal profits should go into the Treasury. This method of taxation is therefore a temporary war measure and is offered as the most feasible method of reaching this class of profits.

The controlling purpose of the law is to ascertain the amount of profits of a given concern in excess of its fair normal level of profits prior to the war and take 80 per cent of the excess for the Treasury. This is the war-profits provision. It can be administered without injustice as to normal business, but there is difficulty in applying this general principle to what is known as "exceptional business," wherein there are different elements of capitalization and different income-producing factors other than "capital invested." The proposed revenue bill undertakes to confer the fullest latitude possible in a statute on the Treasury to deal with individual cases and classes of cases of exceptional business in the light of the particular circumstances. The Treasury is authorized to adopt different rules of computation to the end that the same relative standard with respect to "capital invested" and income may be arrived at that is prescribed for normal business. In no other way can equity and equality under this tax method be secured. The net income, for the purpose of this tax, is computed on the same basis as income for the purpose of the income tax. The present excess-profits law is retained with some modifications. The rates are increased, so that under the present bill they are as follows: Thirty-five per cent of the amount of the net income in excess of 8 per cent of the invested capital plus \$3,000, and not in excess of 15 per cent of the invested capital; 50 per cent of the amount of the net income in excess of 15 per cent of the invested capital and not in excess of 20 per cent; and 70 per cent of the amount of the net income in excess of 20 per cent of such capital. The war and excess-profits provisions are in the alternative. Whichever method produces the largest reve-

nue yield is applied. It is estimated that 90 per cent of the cases will fall under the war-profits provision. The 8 per cent provision of the present law, which applies to salaries and similar incomes as to the excess over \$6,000, is repealed.

Provisions for relief to corporations with invested capital of less than \$50,000 are proposed. Another class of corporations whose invested capital is not a material or the principal income-producing factor are made subject to a flat tax of 20 per cent upon the amount of net income in excess of \$3,000, in lieu of the regular excess and war profits provisions. Corporations, however, though falling within this class, who derive 50 per cent or more of their gross income from the performance of Government contracts, or from commissions connected with the same, are denied this classification. None can take advantage of it unless their invested capital is less than \$100,000. The capital percentage exemption rate under the excess-profits act is made a flat 8 per cent in lieu of the present 7 to 9 per cent. All corporations exempt under the income-tax law are likewise exempt under the excess and war profits provisions.

Under the war-profits provision the prewar period comprises the calendar years 1911-12-13, or if a corporation was not in existence during the whole of such period, then as many of such years during the whole of which the corporation was in existence. Each corporation under this method is allowed a specific exemption of \$3,000 in addition to its average prewar earnings. Corporations which have increased or decreased their capital since the prewar period will apply 10 per cent as an allowance or deduction, as the case may be. If a corporation was not in existence during the whole of any one calendar year during the prewar period, or if it had no net income for that period, or if its prewar earnings were less than 10 per cent of its invested capital for the calendar year, it can have in lieu a deduction of 10 per cent of its invested capital for the taxable year, plus \$3,000. Individuals and partnerships are exempt from the operation of the proposed war and excess profits provisions. The graduated income surtax on individuals is expected to equalize the condition thus created.

Cases of hardship are taken care of by certain new provisions conferring on the Treasury authority to deal with them according to the particular circumstances and within certain limits prescribed by the provisions of the bill. It will be seen that the entire provisions of the war and excess-profits measure are designed to allow each business concern a fair and reasonable profit as a basis and then tax rather vigorously the excess. This plan should result in the greatest measure of relative fairness among the taxpayers and the minimum of injustice or hardship in particular cases. The proposed measure creates a board of tax advisers in the Treasury Department to deal with all exceptional cases such as have been described. No business concern, therefore, should have any apprehension as to discriminatory treatment under the operation of the law, because he is assured in advance of just, equitable, and impartial action by the Treasury in applying the law to his business profits. England expects to levy \$1,500,000,000 of excess profits for this fiscal year. Our country is far more able to pay \$3,200,000,000 without business injury or disturbance.

The estate or inheritance tax comes next. This tax is based upon the doctrine that since the citizens derives the right to transmit property from the laws of the country it is not unjust that in exercising this privilege a fair contribution should be made for the support of the Federal and State Governments. The States now derive about \$35,000,000 from this source. It is estimated that the Federal Government will derive \$140,000,000 for a full year. England for many years has been collecting \$135,000,000 from estates and inheritances. The aggregate tax imposed in this country is therefore comparatively moderate. The burden of the State inheritance systems rests upon the collateral beneficiary. Since three-fourths of all property passing by death goes to lineal descendants, it was deemed justifiable that the Federal Government should impose a substantial graduated system of rates on the net estate itself.

The Federal law exempts estates under \$50,000. One-half of all property passing by death falls under this exemption provision. The bill now pending makes a general increase in the estate tax rates, raising the bottom rate from 2 per cent to 3 per cent on that part of a net estate of \$100,000 which exceeds \$50,000, with corresponding increases, with the result that the top rate on that part of net estates exceeding \$10,000,000 is increased from 25 per cent to 40 per cent.

Mr. Speaker, the policy of the tax on transportation and other facilities finds precedents in our Civil War revenue acts and in most of the war-revenue laws of European countries at the present time. The amount of tax sought through these agencies is comparatively less than that now imposed in other countries.

The rate on transportation of freight remains at 3 per cent. The rate on express matter continues at 1 cent for each 20-cent payment as in the present law. The rate on Pullman accommodations is reduced from 10 per cent to 8 per cent, on recommendation of the Director General of Railroads. The flat 5 per cent rate on telegraph and telephone messages is graduated under the proposed bill according to the amount of the charge for each message.

Some readjustments, as well as material increases of rates, are made with respect to the tax on beverages. The tax on distilled spirits is increased from \$3.20 to \$8 per gallon, while the tax on such beverages used for manufacturing purpose is increased from \$2.20 to \$4.40 per gallon. In the case of all other beverages, except soft drinks, the rates under existing law are doubled. As to soft drinks, it is now proposed to levy a tax of 30 per cent upon the manufacturers', producers', or importers' selling price of cereal beverages, and 20 per cent upon the manufacturers', producers', or importers' selling price of all other soft drinks. This method is substituted for the gallon basis upon which the present law imposes the tax. Soft drinks compounded or mixed at the soda fountain, ice-cream parlor, or similar place, and ice cream and ice-cream compounds, when sold for consumption as a business is subjected to a tax of 2 cents for each 10 cents or fraction thereof of the selling price, but in case of sales amounting to 7 cents or less the tax is 1 cent.

The tax on cigars, cigarettes, tobacco, and other manufactures thereof has been doubled in the case of cigarettes and some cigars and substantially increased in all other respects. Large exemption privileges are eliminated, and a floor tax as to retailers is inserted.

The tax on admissions is increased from 1 cent to 2 cents for each 10 cents or fraction thereof paid for such admission. In cases where persons in the naval or military service are admitted free by the proprietor no tax is imposed. The tax upon dues or membership fees to any social, athletic, or sporting club is increased from 10 per cent to 20 per cent, where the annual dues exceed \$10 per annum, and also upon initiation fees amounting to more than \$10.

A more extended and comprehensive system of excise taxes is imposed in the revenue bill which has passed the House. This embraces a luxury schedule which is set out in two classifications. The first classification, which is taxed 10 per cent, relates to articles which constitute luxuries by reason of their nature, such as jewelry, valuable furs, yachts, liveries, hunting garments, tapestries, and so forth. The second classification relates to articles deemed luxuries by reason of the price at which sold, with respect to which a tax of 20 per cent is imposed on the amount paid in excess of the price fixed in the bill. To illustrate: A tax of 20 per cent in each instance is imposed on the price paid by the consumer for carpets in excess of \$5 per square yard; purses in excess of \$7.50; valises in excess of \$25; umbrellas and parasols in excess of \$4; men's and boys' suits in excess of \$50; women's and misses' cloaks, suits, and coats in excess of \$50; women's and misses' dresses in excess of \$40; women's and misses' hats in excess of \$15; men's and boys' hats in excess of \$5; men's, women's, boys', and misses' boots and shoes in excess of \$10; men's and boys' neckties and neckwear in excess of \$2; and so forth. This luxury tax was first introduced in France during last year. It has since been adopted in England and is now proposed here. The tax has the twofold purpose of providing revenue and reducing extravagance. This is upon the theory that such expenditures should be diverted as much as possible to war purposes. A luxury-tax schedule will doubtless be perfected and developed and made a permanent peace tax, at least until the war debt has been measurably wiped out.

The list of special taxes embraced in the bill is very similar to the system of special taxes found in the Civil War revenue act. The same may be said of the stamp taxes in the present law and which are reenacted in the proposed bill.

Mr. Speaker, the somewhat brief review and comment I have made with respect to our system of war-revenue taxation as existing and proposed clearly shows that the tax imposed in each case and class of cases is based on both precedent and experience, either in this country or in other important commercial countries. Our income-tax law is to be found in more than 50 countries and States, and the present statute on this subject is everywhere recognized as superior to any other income-tax act now in existence. The war and excess-profits measure is in operation in more than 14 countries. The estate tax is one of the oldest tax methods in existence and is universal in its use. The transportation and the gross-receipts taxes are recognized war measures in almost all the twenty-odd nations at war. The beverage and stamp taxes, in their chief provisions,

posing income taxation by apportionment. The effect of this political and sectional by-play under the operation of a tax law would be to impose a head tax, so that the wealthiest individual would pay no more than the pauper, as a rule. This baseless theory ignores the real question of where income is produced and assumes that it is produced where it happens to be returned for taxation.

The sophistry of this whole matter has been so completely exposed by that great stand-pat Republican statesman, Hon. Elihu Root, in his letter to State Senator Davenport on February 17, 1910, urging the New York Legislature to ratify the income-tax amendment to the Constitution, that I read it as the most complete and crushing reply to every little sectional politician who sticks his head up in any part of the country. Mr. Root asserted:

It is said that a very large part of any income tax under the amendment would be paid by citizens of New York. That is undoubtedly true, but there is all the more reason why our legislature should take special care to exclude every narrow and selfish motive from influence upon its action and should consider the proposal in a spirit of broad national patriotism and should act upon it for the best interests of the whole country.

The main reason why the citizens of New York will pay so large a part of the tax is that New York City is the chief financial and commercial center of a great country, with vast resources and industrial activity. For many years Americans engaged in developing the wealth of all parts of the country have been going to New York to secure capital and market their securities and to buy their supplies. Thousands of men who have amassed fortunes in all sorts of enterprises in other States have gone to New York to live, because they like the life of the city or because their distant enterprises require representation at the financial center. The incomes of New York are in a great measure derived from the country at large. A continual stream of wealth sets toward the great city from the mines and manufactories and railroads outside of New York. The United States is no longer a mere group of separate communities embraced in a political union; it has become a product of organic growth, a vast industrial organization covering and including the whole country; and the relation of New York City to the whole organization of which it is a part is the great source of her wealth and the chief reason why her citizens will pay so great a part of an income tax. We have the wealth because behind the city stands the country. We ought to be willing to share the burdens of the National Government in the same proportion in which we share its benefits.

This broad, sound, and patriotic statement of Senator Root applies in almost equal measure to such great industrial and financial centers as Philadelphia, Chicago, and Boston.

Mr. Speaker, to one familiar with our present tax laws little difficulty will be experienced in grasping and readily understanding this bill which has passed the House. The bill in its chief effects does four things: First, in a general way it practically doubles most of the existing tax rates; second, inserts a war-profits provision in the alternative with the present excess-profits law; third, codifies the income and estate tax provisions; fourth, adds a so-called luxury schedule of taxes. There are, of course, minor administrative changes or insertions here and there in the bill, as well as certain other additional or modifying provisions, but which are not generally of a fundamental nature. It will be seen that the language of the income and estate tax statutes is retained almost entirely intact.

Every member of the Committee on Ways and Means knows that it was the intention and controlling motive of the committee to apportion taxes equitably in all its work of drafting and reporting the present revenue measure, and that not a serious hint or suggestion calculated to help one section or hurt another was heard. The bill also contains many safeguards against any inequities that may arise from its operation with respect to individual taxpayers. The income tax comes first in the bill. Most civilized countries now have this tax. Its underlying principle is that every citizen should pay in proportion to his ability, and that net income is the best measure of such ability. The income tax, with the excess-profits tax superimposed on it as a basis, is the backbone of our financial system, as it is in England, and as the income tax alone must be in both countries in the future.

Many complain of the complicated nature of an income-tax law. Equity and simplicity should be the prime requisites of any tax law. To secure equity it is necessary, on account of our complicated business conditions, to insert numerous saving provisions, exceptions, and qualifications in the general provisions of the law. These produce the principal complications complained of. The taxpayer must realize, therefore, that in the endeavor of Congress to make his tax burdens equitable it has proceeded as far as possible to secure the maximum of equity with the minimum of complexity, notwithstanding the fact that in this endeavor complexities increase as the equities increase.

It is estimated that 615,000 individuals had a net income of \$4,000 or over for the year 1917, and 2,440,000 had incomes of \$1,000 and \$2,000 to \$4,000, according to whether single or married. As showing the ability of the country to pay taxes, the total aggregate net income returned by individuals and cor-

porations subject to income tax for the years 1915-1917 and the estimated amount for 1918 is near \$45,000,000,000. From this entire amount the Government has derived in income and excess-profits taxes thus far less than \$3,500,000,000. The added income and excess-profits tax levy for 1918, estimated at \$5,500,000,000, would make a combined levy from these sources of \$9,000,000,000 for these four years, leaving to the taxpayers of the country \$36,000,000,000 net profit. To the person who is willing to keep an account of his gross profits and the expenses of producing them, a five-minute study of an income-tax return will enable him to fill it out without delay or inconvenience. There is scarcely any material change in the provisions of the present income tax law, save of a minor administrative character here and there. The marked increase in the rates is the distinguishing feature of this part of the new bill. The exemptions and deductions are virtually the same as existing law. The normal tax on individuals is fixed at 12 per cent, with a proviso that the rate of 6 per cent shall apply to all taxable incomes up to \$4,000.

A married person, for example, with a net income of \$6,000 would pay 6 per cent normal tax on \$4,000 and 2 per cent surtax on the excess over \$5,000. Corporations are subjected to the same normal rate of 12 per cent as to all profits distributed as dividends or paid on indebtedness or used to purchase liberty bonds. On the amount retained in the corporate business the rate is 18 per cent. This is in lieu of the so-called Jones amendment in the present law relating to the taxation of undistributed profits. Corporations are allowed deductions for all interest on indebtedness under the proposed change. Losses in transactions entered into for profit, whether constituting a business or not, are now made deductible. Certain specific allowances for amortization of buildings, machinery, and so forth, erected for war purposes, directly or indirectly, but which will be of little or no use after the war, are proposed. Domestic corporations are allowed a deduction of \$2,000 under a new provision of the bill. It is clear that the income and excess or war profits levy, large as it is proposed, will leave business a much higher level of profits than the normal prewar level. This will enable business concerns to deal with high-priced inventories, the high price of labor, and to grow and expand.

Mr. Speaker, the war-profits and excess-profits provision is based upon the view, now universally agreed to, that it is entirely justifiable for the Government to take the chief portion of abnormal profits arising during the war for the payment of war expenditures. Some 14 nations have enacted such measures, and they are cheerfully acquiesced in by all citizens. It is true that any excess or war profits act that may be devised will necessarily be lacking in equity and scientific accuracy in many individual cases. The principal feature of equity is that no citizen should desire or be permitted to make and keep abnormal or colossal profits out of this awful war, but that most of the excess above normal profits should go into the Treasury. This method of taxation is therefore a temporary war measure and is offered as the most feasible method of reaching this class of profits.

The controlling purpose of the law is to ascertain the amount of profits of a given concern in excess of its fair normal level of profits prior to the war and take 80 per cent of the excess for the Treasury. This is the war-profits provision. It can be administered without injustice as to normal business, but there is difficulty in applying this general principle to what is known as "exceptional business," wherein there are different elements of capitalization and different income-producing factors other than "capital invested." The proposed revenue bill undertakes to confer the fullest latitude possible in a statute on the Treasury to deal with individual cases and classes of cases of exceptional business in the light of the particular circumstances. The Treasury is authorized to adopt different rules of computation to the end that the same relative standard with respect to "capital invested" and income may be arrived at that is prescribed for normal business. In no other way can equity and equality under this tax method be secured. The net income, for the purpose of this tax, is computed on the same basis as income for the purpose of the income tax. The present excess-profits law is retained with some modifications. The rates are increased, so that under the present bill they are as follows: Thirty-five per cent of the amount of the net income in excess of 8 per cent of the invested capital plus \$3,000, and not in excess of 15 per cent of the invested capital; 50 per cent of the amount of the net income in excess of 15 per cent of the invested capital and not in excess of 20 per cent; and 70 per cent of the amount of the net income in excess of 20 per cent of such capital. The war and excess-profits provisions are in the alternative. Whichever method produces the largest reve-

nue yield is applied. It is estimated that 90 per cent of the cases will fall under the war-profits provision. The 8 per cent provision of the present law, which applies to salaries and similar incomes as to the excess over \$6,000, is repealed.

Provisions for relief to corporations with invested capital of less than \$50,000 are proposed. Another class of corporations whose invested capital is not a material or the principal income-producing factor are made subject to a flat tax of 20 per cent upon the amount of net income in excess of \$3,000, in lieu of the regular excess and war profits provisions. Corporations, however, though falling within this class, who derive 50 per cent or more of their gross income from the performance of Government contracts, or from commissions connected with the same, are denied this classification. None can take advantage of it unless their invested capital is less than \$100,000. The capital percentage exemption rate under the excess-profits act is made a flat 8 per cent in lieu of the present 7 to 9 per cent. All corporations exempt under the income-tax law are likewise exempt under the excess and war profits provisions.

Under the war-profits provision the prewar period comprises the calendar years 1911-12-13, or if a corporation was not in existence during the whole of such period, then as many of such years during the whole of which the corporation was in existence. Each corporation under this method is allowed a specific exemption of \$3,000 in addition to its average prewar earnings. Corporations which have increased or decreased their capital since the prewar period will apply 10 per cent as an allowance or deduction, as the case may be. If a corporation was not in existence during the whole of any one calendar year during the prewar period, or if it had no net income for that period, or if its prewar earnings were less than 10 per cent of its invested capital for the calendar year, it can have in lieu a deduction of 10 per cent of its invested capital for the taxable year, plus \$3,000. Individuals and partnerships are exempt from the operation of the proposed war and excess profits provisions. The graduated income surtax on individuals is expected to equalize the condition thus created.

Cases of hardship are taken care of by certain new provisions conferring on the Treasury authority to deal with them according to the particular circumstances and within certain limits prescribed by the provisions of the bill. It will be seen that the entire provisions of the war and excess-profits measure are designed to allow each business concern a fair and reasonable profit as a basis and then tax rather vigorously the excess. This plan should result in the greatest measure of relative fairness among the taxpayers and the minimum of injustice or hardship in particular cases. The proposed measure creates a board of tax advisers in the Treasury Department to deal with all exceptional cases such as have been described. No business concern, therefore, should have any apprehension as to discriminatory treatment under the operation of the law, because he is assured in advance of just, equitable, and impartial action by the Treasury in applying the law to his business profits. England expects to levy \$1,500,000,000 of excess profits for this fiscal year. Our country is far more able to pay \$3,200,000,000 without business injury or disturbance.

The estate or inheritance tax comes next. This tax is based upon the doctrine that since the citizens derives the right to transmit property from the laws of the country it is not unjust that in exercising this privilege a fair contribution should be made for the support of the Federal and State Governments. The States now derive about \$35,000,000 from this source. It is estimated that the Federal Government will derive \$140,000,000 for a full year. England for many years has been collecting \$135,000,000 from estates and inheritances. The aggregate tax imposed in this country is therefore comparatively moderate. The burden of the State inheritance systems rests upon the collateral beneficiary. Since three-fourths of all property passing by death goes to lineal descendants, it was deemed justifiable that the Federal Government should impose a substantial graduated system of rates on the net estate itself.

The Federal law exempts estates under \$50,000. One-half of all property passing by death falls under this exemption provision. The bill now pending makes a general increase in the estate tax rates, raising the bottom rate from 2 per cent to 3 per cent on that part of a net estate of \$100,000 which exceeds \$50,000, with corresponding increases, with the result that the top rate on that part of net estates exceeding \$10,000,000 is increased from 25 per cent to 40 per cent.

Mr. Speaker, the policy of the tax on transportation and other facilities finds precedents in our Civil War revenue acts and in most of the war-revenue laws of European countries at the present time. The amount of tax sought through these agencies is comparatively less than that now imposed in other countries.

The rate on transportation of freight remains at 3 per cent. The rate on express matter continues at 1 cent for each 20-cent payment as in the present law. The rate on Pullman accommodations is reduced from 10 per cent to 8 per cent, on recommendation of the Director General of Railroads. The flat 5 per cent rate on telegraph and telephone messages is graduated under the proposed bill according to the amount of the charge for each message.

Some readjustments, as well as material increases of rates, are made with respect to the tax on beverages. The tax on distilled spirits is increased from \$3.20 to \$8 per gallon, while the tax on such beverages used for manufacturing purpose is increased from \$2.20 to \$4.40 per gallon. In the case of all other beverages, except soft drinks, the rates under existing law are doubled. As to soft drinks, it is now proposed to levy a tax of 30 per cent upon the manufacturers', producers', or importers' selling price of cereal beverages, and 20 per cent upon the manufacturers', producers', or importers' selling price of all other soft drinks. This method is substituted for the gallon basis upon which the present law imposes the tax. Soft drinks compounded or mixed at the soda fountain, ice-cream parlor, or similar place, and ice cream and ice-cream compounds, when sold for consumption as a business is subjected to a tax of 2 cents for each 10 cents or fraction thereof of the selling price, but in case of sales amounting to 7 cents or less the tax is 1 cent.

The tax on cigars, cigarettes, tobacco, and other manufactures thereof has been doubled in the case of cigarettes and some cigars and substantially increased in all other respects. Large exemption privileges are eliminated, and a floor tax as to retailers is inserted.

The tax on admissions is increased from 1 cent to 2 cents for each 10 cents or fraction thereof paid for such admission. In cases where persons in the naval or military service are admitted free by the proprietor no tax is imposed. The tax upon dues or membership fees to any social, athletic, or sporting club is increased from 10 per cent to 20 per cent, where the annual dues exceed \$10 per annum, and also upon initiation fees amounting to more than \$10.

A more extended and comprehensive system of excise taxes is imposed in the revenue bill which has passed the House. This embraces a luxury schedule which is set out in two classifications. The first classification, which is taxed 10 per cent, relates to articles which constitute luxuries by reason of their nature, such as jewelry, valuable furs, yachts, liveries, hunting garments, tapestries, and so forth. The second classification relates to articles deemed luxuries by reason of the price at which sold, with respect to which a tax of 20 per cent is imposed on the amount paid in excess of the price fixed in the bill. To illustrate: A tax of 20 per cent in each instance is imposed on the price paid by the consumer for carpets in excess of \$5 per square yard; purses in excess of \$7.50; valises in excess of \$25; umbrellas and parasols in excess of \$4; men's and boys' suits in excess of \$50; women's and misses' cloaks, suits, and coats in excess of \$50; women's and misses' dresses in excess of \$40; women's and misses' hats in excess of \$15; men's and boys' hats in excess of \$5; men's, women's, boys', and misses' boots and shoes in excess of \$10; men's and boys' neckties and neckwear in excess of \$2; and so forth. This luxury tax was first introduced in France during last year. It has since been adopted in England and is now proposed here. The tax has the twofold purpose of providing revenue and reducing extravagance. This is upon the theory that such expenditures should be diverted as much as possible to war purposes. A luxury-tax schedule will doubtless be perfected and developed and made a permanent peace tax, at least until the war debt has been measurably wiped out.

The list of special taxes embraced in the bill is very similar to the system of special taxes found in the Civil War revenue act. The same may be said of the stamp taxes in the present law and which are reenacted in the proposed bill.

Mr. Speaker, the somewhat brief review and comment I have made with respect to our system of war-revenue taxation as existing and proposed clearly shows that the tax imposed in each case and class of cases is based on both precedent and experience, either in this country or in other important commercial countries. Our income-tax law is to be found in more than 50 countries and States, and the present statute on this subject is everywhere recognized as superior to any other income-tax act now in existence. The war and excess-profits measure is in operation in more than 14 countries. The estate tax is one of the oldest tax methods in existence and is universal in its use. The transportation and the gross-receipts taxes are recognized war measures in almost all the twenty-odd nations at war. The beverage and stamp taxes, in their chief provisions,

have long been utilized in time of peace as well as war in most European countries. The taxpayer in the United States can feel absolutely assured that however high the tax rate in a given instance or whatever the method of levy, the burden or, in an exceptional case, the hardship, if he should be pleased so to term it, is substantially less to the citizens of the United States during this war than to the citizens of any other country, large or small. The citizens of the nations which entered the war at the beginning have been patiently, cheerfully, and even gladly submitting to more onerous and inequitable tax burdens and to far greater hardships and privations in many other respects than any citizen of the United States has been or will be called upon to undergo. We can, therefore, congratulate ourselves that whatever war burdens of any kind it may fall to our lot to bear, they fall upon us, in any event, in far lighter measure than upon the citizenship of England, France, Italy, and that of all the other countries which drew the sword long in advance of us.

That the American people under these relatively favorable conditions will cheerfully acquiesce in and meet these war obligations and burdens, in view of the righteous cause for which we fight, I have no doubt. For the civilian population to murmur and complain in the face of these conditions would be to discourage our soldiers at the front and to discount their sacrifices. On the other hand, we can send to them no more cheering message than the report that the American people are willingly and gladly undertaking to shoulder and carry through our revenue and bond programs, aggregating more than \$24,000,000,000 for this fiscal year. With every citizen pursuing a true, steady course, under the matchless leadership of our great President, peace will soon crown our efforts, and it will not be a peace of negotiation with unprincipled German rulers, but a real, lasting peace—a peace by military decision.

APPENDIX I.

Revenue receipts during the fiscal year 1918 and estimated receipts during the fiscal year 1919 under existing law and under the proposed bill.

	Revenue receipts.		
	Fiscal year 1918.	Fiscal year 1919 under existing law (estimated).	For 12-month period under proposed bill.
Income tax:			
Individual.....	\$930,000,000	\$930,000,000	\$1,482,186,000
Corporation.....	528,500,000	528,500,000	894,000,000
Excess-profits tax.....	1,791,000,000	1,791,000,000	3,200,000,000
Estate tax.....	47,453,000	75,000,000	110,000,000
Transportation:			
Freight.....	30,000,000	75,000,000	75,000,000
Express.....	6,429,000	20,000,000	20,000,000
Persons.....	24,308,000	60,000,000	60,000,000
Oil by pipelines.....	1,453,000	3,500,000	4,550,000
Seats and berths.....	2,237,000	5,000,000	5,000,000
Telegraph and telephone.....	6,298,000	14,000,000	16,000,000
Insurance.....	6,492,000	12,000,000	12,000,000
Admissions.....	26,357,000	50,000,000	100,000,000
Club dues.....	2,259,000	4,500,000	9,000,000
Excise taxes:			
Automobiles, etc.....	23,981,000	41,000,000	123,750,000
Jewelry, sporting goods, etc.....	13,000,000	35,000,000	80,000,000
Other taxes on luxuries, at 10 per cent.....			88,700,000
Other taxes on luxuries, at 20 per cent.....			184,795,000
Gasoline.....			40,000,000
Yachts and pleasure boats.....			1,000,000
Beverages.....	300,000,000	500,000,000	1,137,000,000
Stamp taxes.....	18,815,000	32,000,000	32,000,000
Tobacco:			
Cigars.....	30,909,000	41,700,000	61,364,000
Cigarettes.....	66,000,000	100,000,000	165,240,000
Tobacco.....	48,000,000	63,700,000	104,000,000
Snuff, etc.....	10,000,000	6,000,000	9,100,000
Papers and tubes.....	325,000	750,000	1,500,000
Special taxes:			
Capital stock.....	24,996,000	25,000,000	70,000,000
Brokers.....	333,000	850,000	1,765,000
Theaters, etc.....	865,000	1,070,000	2,145,000

How the Department of Agriculture is Helping to Win the War.

EXTENSION OF REMARKS

OF

HON. ARTHUR W. OVERMYER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 27, 1918.

Mr. OVERMYER. Mr. Speaker, in the prosecution of the war, with daily increasing evidences of early success, the United States Department of Agriculture, through cooperation with State departments of agriculture and the millions of patriotic farmers throughout the country, has rendered a service second only in importance, if second to any, to the War and Navy Departments. Just as the accomplishments of our War Department and Navy Department in this war stand unrivaled and unequalled in the history of the world, so are the achievements and accomplishments of the United States Department of Agriculture without parallel.

THE DEPARTMENT OF AGRICULTURE AND THE UNITED STATES FOOD ADMINISTRATION SEPARATE AGENCIES.

Gentlemen will recall the reasons for placing the Food Administration under management other than the Department of Agriculture. This was indeed a wise thing to do, for it has been possible, through cooperation between the two departments, to accomplish what could not have been done if the organization of the Department of Agriculture had been burdened with the arduous and distasteful work of the Food Administration. And whatever petty criticisms may have come from a few of our people, some in public life, as to the restrictions and regulations imposed from time to time by the United States Food Administration, they are swept aside by the following tribute from the English press, speaking for our most powerful ally in this war. Writing in the London Daily News of our powerful military assistance which, he says, "is represented by the momentous change that has come over the face of the war during the past few weeks," the editor goes on to say:

But it is not in the military field only that America (made effective, he it remembered, by the British command of the sea) has turned the tide of the war finally. She has struck down another weapon whose

shadow was over us last winter and spring. We are able to speak about that weapon freely now, for the peril is over. There is plenty of food in the land and we are on the brink of harvest. It is morally certain that to the end of the war, whenever it may come, there will be no return of the specter of starvation. Only those in the inner councils of the ministry of food know how that specter haunted us last winter, how perilously near we were to disaster, how our fate and the fate of our allies hung upon the capacity of the United States to feed us.

There was one dark period when it seemed that it could not be done. The harvest of last year in the United States was 9 per cent below the average, and the normal export of food from the United States is only 7 per cent of the total production. That is to say, the harvest was 2 per cent below the country's normal home consumption. But something little short of a miracle was performed. The United States poured into the countries of the allies 10,000,000 tons of food and saved them in the economic field as her soldiers have helped to save them on the battle field. In all the achievements of the war there has been nothing more remarkable than this, and in any true estimate of the personal triumphs of the war there is none that would rank above that of Mr. Hoover, who is now on a visit to this country, and the allies generally to arrange what the President calls the "common table."

But Mr. Hoover would himself be the first to disclaim the credit for the miracle. It belongs to the American people who, at his inspiration, voluntarily gave up the use of wheat flour in order that the allied armies and peoples might be tided over the critical months of spring and early summer. There is no precedent for a self-denying ordinance imposed on such a scale.

It was the business of the Department of Agriculture to see to the production of foodstuffs and feed, increasing it to every ounce possible, and the business of the Food Administration to regulate and control the distribution of the food when produced. The fact that our armies at home and abroad, as well as the armies of our allies, have been fed and are being fed liberally and regularly, and the further fact that our civilian population and that of our allied countries has been kept pacified, if not always satisfied, is due to the administration of the powers granted by this Congress under the food-control legislation enacted last year. The production of the food necessary to solve this tremendous problem is another story and forms an interesting and brilliant chapter in the history of the world war and our participation in it.

As a member of the Committee on Agriculture of the House, I have taken a deep interest in the work of the Department of Agriculture, and I shall endeavor to give a brief summary of the work of the department in meeting the emergency that confronted this country and the world in the spring of 1917 regarding food and feeds.

PREWAR REORGANIZATION AND LEGISLATION.

It is fortunate, indeed, that the Department of Agriculture was prepared to meet the shock of a world war. In 1913 the Secretary of Agriculture asked for and obtained authority of Congress to reorganize the department by establishing a more effective and workable grouping of department activities. This reorganization was promptly effected, and simultaneously there were enacted several laws the administration of which was intrusted to the Department of Agriculture and which laws marked an epoch in agricultural legislation. They were the cooperative agricultural extension act, the cotton-futures act, the United States warehouse act, and the Federal good-roads act.

The new banking and currency law, the Federal farm-loan law, and the vocational-education law, all enacted since 1913 and before or contemporaneous with our entry into the war, contributed to the legislative program that enabled the Department of Agriculture to be prepared for war-time conditions.

Under the provisions of the cooperative agricultural extension act, enacted in 1914, there were appointed and acting in the 2,800 agricultural counties of the United States 2,400 county agents and assistants and 1,200 demonstration agents when we entered the war. In addition there are 170 counties of the South that have negro farm agents and demonstration agents, and in the home-economies work of the department there are acting 190 urban home-demonstration agents in the larger cities. There was a total of approximately 5,500 men and women cooperatively employed by the Department of Agriculture and the State agricultural colleges when we entered war, and through this force of trained men and women, moving about among our agricultural people, bringing to them by demonstration in the field and in the home, by groups and individuals, the scientific and practical information accumulated by the Department of Agriculture, it was possible at once to enlist the patriotic efforts of all our people to increased production and effective conservation. And it is through this group of men and women that the department to-day is able to reach practically every agricultural community in the United States with its suggestions and advice on war-time agricultural problems.

Equipped with this splendid organization, reaching to every nook and corner of the country, cooperating with all the State agricultural departments and all agricultural colleges, the United States Department of Agriculture went into the war

with a war-time organization. In addition to the cooperative agricultural extension act, the following legislative enactments of the preceding four years, supplemented by additional agricultural war measures which will be referred to hereafter, made possible the prompt mobilization of American agriculture.

PREWAR LEGISLATION FOR AGRICULTURE.

(a) The cotton-futures act of August 18, 1914, reenacted with amendments in the agricultural appropriation act for the fiscal year 1917, has resulted in the establishment of definite standards for cotton, has made possible the supervision of the operations of the futures exchanges, and has placed cotton trading on a sounder basis.

(b) The United States grain-standards act, which was included in the agricultural appropriation act for the fiscal year 1917 and 1918, is bringing about uniformity in grading, is enabling the farmer to obtain a fairer price for his product and to improve its quality, and is preventing or diminishing materially the shipment of adulterated grain.

(c) The United States warehouse act, also included in the agricultural appropriation act for 1917 and 1918, authorizes the Department of Agriculture to license bonded warehouses which handle certain agricultural products. It makes possible the issuance of reliable and easily negotiable warehouse receipts, promotes the better storing of farm products, and encourages the standardizing of storages and of marketing processes.

(d) The Federal farm-loan act was approved July 17, 1916. It creates a banking system which reaches intimately into the rural districts, operates on terms suited to a farmer's needs under sympathetic management, introduces business methods into farm finances, brings order out of chaos, reduces the cost of handling farm loans, places upon the market mortgages which are a safe investment for private funds, attracts into agricultural operations a fair share of the capital of the Nation, and reduces interest.

(e) A provision in the Federal reserve act, approved December 23, 1913, authorized national banks to lend money on farm mortgages and recognized the peculiar needs of the farmer by giving his paper a maturity period of six months.

(f) The Federal good-roads act, approved July 11, 1916, provides for cooperation between the Federal Government and the States in the construction of rural post roads and of roads and trails within or partly within the national forests. It has contributed to the establishment of a more effective highway machinery in each State, strongly influenced the development of good-road building along right lines, stimulated larger production and better marketing, promoted a fuller and more attractive rural life, added greatly to the convenience and economic welfare of all the people, and strengthened the national foundations. It appropriates from the Federal Treasury the following amounts to be expended in cooperation with the States in the construction and improvement of rural post roads: For the fiscal year 1917, \$5,000,000; 1918, \$10,000,000; 1919, \$15,000,000; 1920, \$20,000,000; 1921, \$25,000,000; total, \$75,000,000. As the States are required to make available at least an equal amount or its equivalent in labor and materials there will be available not less than \$150,000,000 for cooperative construction work extending over a period of five years.

WHEN THE WAR CAME.

Three days after our entry into the war representatives of all the agricultural forces of the United States, headed by Secretary Houston of the United States Department of Agriculture, sat in a conference at St. Louis and drew up a program of food production and conservation the substantial part of which, within four months, had been enacted into law, and the wisdom of which has been fully proven by results attained.

To carry out this program the following legislation was enacted by Congress:

WAR-TIME LEGISLATION FOR AGRICULTURE.

(a) The food-control act of August 10, 1917, vesting in the President regulatory powers, in considerable part of a commercial nature, to be exercised through an emergency organization rather than through an existing department to deal with special and urgent national and international food problems growing out of the war. The provisions of the food-control act, so far as they relate to food and feedstuffs, are executed by the Food Administrator.

(b) The food-production act of August 10, 1917, an act "to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products," is administered by the Department of Agriculture and carried an appropriation of \$11,346,400 for the following purposes:

1. The prevention, control, and eradication of the diseases and pests of live stock; the enlargement of live-stock produc-

tion; and the conservation and utilization of meat, poultry, dairy, and other animal products, \$885,000.

2. Procuring, storing, and furnishing seeds for cash at cost to farmers in restricted areas where emergency conditions prevail, \$2,500,000.

3. The prevention, control, and eradication of insects and plant diseases injurious to agriculture, and the conservation and utilization of plant products, \$441,000.

4. The further development of the extension service, which is conducted in cooperation with the agricultural colleges in the various States, \$4,348,400.

5. Surveys of the food supply of the United States, gathering and disseminating information concerning farm products, extending and enlarging the market-news services, preventing waste of food in storage, in transit, or held for sale, giving advice concerning the market movement or distribution of perishable products, and investigating and certifying to shippers the condition as to soundness of fruits, vegetables, and other food products received at important central markets, \$2,522,000.

6. The development of the information work of the department, enlarging the facilities for dealing with the farm-labor problem, and extending the work of the Bureaus of Crop Estimates, Chemistry, and Biological Survey, \$650,000.

7. With an appropriation of \$10,000,000 contained in the food-control act, the War Industries Board purchased 120,000 tons of nitrate of soda for fertilizer use, and the Department of Agriculture is selling it to farmers for cash at cost.

8. Congress made available \$200,000,000 to facilitate the operations of the Farm Loan Board, because of the unusual demands on funds which otherwise might have been invested more freely in such bonds.

9. Congress appropriated \$4,000,000, in addition to the \$2,500,000 in the food-production act, for the purchase and sale of seed to farmers for cash at cost.

10. Under the powers given in the food-control act there has been placed under license and control by the Department of Agriculture—

- (a) The ammonia industry.
- (b) The fertilizer industry.
- (c) The farm-equipment industry.
- (d) The stockyards industry.

11. Under the selective-service law—

(a) Skilled farm labor has been given deferred classification, being placed in class 2.

(b) Assistant and associate managers of necessary agricultural enterprises have been given deferred classification, being placed in class 3.

(c) Heads of necessary agricultural enterprises have been given deferred classification, being placed in class 4.

(d) In order to prevent the possibility of a failure of leaders in the agricultural field provision has been made for a reserve from the first third of agricultural seniors in the agricultural colleges.

12. The Secretary of War requested Congress to give him authority to furlough farmers in the National Army in order that they might return to their farms for certain periods if military conditions permitted it. The Congress granted the authority.

The food-production act has been continued for the next fiscal year and carries an appropriation of nearly \$12,000,000.

RESULTS.

Through the States Relations Service, which administers the cooperative agricultural extension act, 6,000,000 farmers were reached during 1917, 3,000,000 through institutes and other meetings, and 3,000,000 additional through demonstrations and other work of county agents. Thus the results of experience and research in agriculture and home economics are carried virtually to every farm and into every farm home in the land.

The results of these farm demonstrations, conducted through county agents, become very apparent when comparison is made between the production in 1913 and 1917. In the South, which for the first time was able last year to feed itself, the records show that—

(a) The number of bushels of corn increased from 658,252,000 to 682,643,000.

(b) The number of bushels of wheat increased from 51,009,000 to 74,857,000, or approximately 50 per cent.

(c) The number of bushels of oats increased from 97,237,000 to 120,613,000, an increase of over 50 per cent.

(d) The number of tons of hay increased from 4,214,000 to 6,510,000.

(e) The number of bushels of white potatoes increased from 17,798,000 to 27,987,000.

(f) The number of bushels of sweet potatoes increased from 47,055,000 to 72,870,000.

In the Northern and Western States, where the work is relatively new, the extension work is having splendid influence. The records show that—

(a) During 1917 they assisted approximately 125,000 farmers in securing better seed, and it is estimated that this increased the production of those farmers by at least 35,000,000 bushels.

(b) During 1917, as a result of a special campaign, they were able to increase the number of live stock of farmers by 43,405 head of cattle, 130,125 head of swine, 148,211 head of sheep, and 327,095 head of poultry.

(c) Seven hundred and fifty-six farmers were aided in securing tractors, with the result that they increased their production 105,000 acres.

(d) As a result of a special campaign to use selected corn 64,000 farmers planted 1,300,000 acres with selected seed, 24,000 farmers planted 100,000 acres of potatoes with seed which were treated for a disease, and 60,000 farmers planted 1,120,000 acres of oats treated for smut.

As an example of the work done among women and girls last year, the canning effort may be cited. Federal and State leaders taught 1,900,000 women and girls to can and dry vegetables and fruits. The girls under instructions canned over 14,000,000 containers and the women more than 35,000,000 containers. At the minimum wholesale price of these products their value aggregated more than \$10,000,000.

In the boys' and girls' club work the youth of the country has been interested and trained in better agriculture and home making.

(a) More than 800,000 boys and girls in the Northern and Western States were enrolled in food-producing and industrial clubs last year. An idea of the contribution which the club workers made to the Nation's food supply may be gained from the reports of 100,000 who sent in returns from their work. These reports show a production of 458,873 bushels of corn, 325,786 bushels of potatoes, 126,460 pounds of beans, 203,383 pounds of grain sorghum, garden produce valued at \$1,000,000, 217,160 jars of jellies, 1,578,510 quarts of fruits, vegetables, meats, and soups; 28,864 tons of sugar beets, 106,358 chicks, 35,370 dozens of eggs, 10,583 hogs, 415 baby beeves, 178 sheep, 599 calves, 346,698 loaves of bread, and other products. Other clubs of smaller enrollment included onion clubs, butter clubs, cow-test and dairy record clubs, sweet-corn clubs, wheat clubs, and home-yard clubs. The value of food produced per individual member was \$21.89, while the cost of the club work was only 74 cents a member.

(b) In the South, 115,745 boys were enrolled in regular clubs, while probably 400,000 were reached and helped in food and feed production through instructions given by agents in schools and community clubs, demonstrations, and so on. It is estimated that the value of food and feed produced by the regular club members last year was \$4,486,900. Corn produced by the regular club members totaled 1,135,516 bushels; peanuts, 102,688 bushels; potatoes, 67,858 bushels; grain sorghum, 38,756 bushels; wheat, 1,080 bushels; oats, 3,737 bushels; peas, 6,717 bushels; beans, 6,233 bushels; hay, 2,171,000 pounds; pork, 2,437,970 pounds; beef, 164,064 pounds; poultry, 135,667 fowls; pigs (breeding project), 37,101; dairy calves, 1,586; sheep, 183; cotton valued at \$109,972; production of four-crop clubs (Georgia alone), valued at 56,800; miscellaneous products valued at \$49,401. Negro boys in the "farm-makers" clubs produced material worth \$61,077.

The Bureau of Plant Industry has aided farmers in every section of the country to increase production by—

(a) Development of new cultural methods.

(b) Introduction of new crops and improved varieties of existing crops.

(c) Combating the destructive plant diseases.

Through its seed-stocks committee it is furnishing tested seed corn to farmers of the great corn States. Seed has been sold at cost for cash to farmers, while reserve stocks have been placed in all States north of the Ohio River. This bureau, in cooperation with others of the department, developed a war-food production program for the Nation. It has undertaken an intensive campaign to eradicate the common barberry, which harbors black rust of wheat and other cereals. It is conducting a successful campaign for the eradication of citrus canker in the Gulf States. It has developed varieties of cotton suited to the irrigated sections of the Southwest and established a cotton industry there now aggregating 150,000 acres. This bureau also took an active interest in encouraging home gardening, which is estimated to have been increased in 1917 by from 200 to 300 per cent.

In a score of ways the Bureau of Plant Industry helped to solve the problem of meeting the increased demands for food and feeds because of the war.

The work of the Bureau of Entomology consists in general of—

(a) Investigations of the life histories and habits of insects injurious and beneficial to agriculture, horticulture, and other crops and products, forest and shade trees.

(b) Investigations of insects affecting the health of men and domestic animals.

(c) Ascertaining the best means of destroying injurious insects.

(d) Work in systematic entomology and other phases of the general science.

This bureau has contributed its share of war-time activity with satisfactory results. It developed control measures for the potato-tuber moth in the Pacific Coast States by which losses from this insect have been greatly reduced; developed remedies for the most important enemies of the sugar beet, including wireworms, webworms, and so forth, with material benefit to the industry; developed and demonstrated satisfactory control of onion thrips; determined remedial measures for protection of truck crops from cutworms; established, with marked success, colonies of ladybird beetles, the enemy of plant lice; developed the use of powdered arsenate of lead as a satisfactory dry poison for tobacco hornworms, cotton worms, and other insects; perfected measures for the mitigation of the boll weevil of cotton, which work has influenced to an important extent agricultural practices in the South; made progress in the development of control methods for the sugar-cane borer; determined effective and satisfactory control of the grape-berry moth and recommended a spray schedule to grape growers; has conducted demonstrations on a large scale in the South to instruct farmers in the prevention of weevil injury to stored grains; has rendered assistance to millmen in the protection of mill products from insect attack; cooperates with the War Department to prevent insect damage to military supplies and stored products; has conducted a nation-wide campaign to increase honey production to help meet the shortage in the supply of sugar. There are 50 specialists in 33 States, cooperating with the State agricultural colleges, who are explaining and demonstrating to farmers, fruit growers, live-stock men, and others in various parts of the country methods of reducing insect losses.

The Bureau of Animal Industry has intensified its efforts to meet war needs and directed its activities toward—

(a) Stimulating the production of meat, dairy, and poultry products.

(b) Utilization of these foods in the most economical ways.

(c) Suppression of animal diseases causing an estimated loss of \$212,000,000 annually.

(d) Investigating the wisest use of available feedstuffs for live stock.

(e) Encouraging the more general raising of farm animals.

Some of the important services this bureau has been able to render to meet war conditions follow:

(a) In 1916 and 1917 caused the early disappearance of a dreaded animal plague, vesicular stomatitis, which broke out among thousands of horses collected for exportation for military purposes.

(b) Eradicated since March, 1913, cattle fever tick from 211,598 square miles in Southern States, forcing a tick-free wedge to the Gulf of Mexico, enabling this immense area to begin to do its full share in meat production, and making a total of 379,312 square miles released from quarantine since the campaign began in 1906, which is over 52 per cent of the total area quarantined.

(c) Freed since 1913, 586,757 square miles from sheep scabies and 246,013 square miles from cattle scabies.

(d) Worked intensively for the control of hog cholera, the greatest impediment to hog production, in 611 counties of 33 States, saving great sums to the swine industry and stimulating increased production. During last year the losses of swine were the lowest in 35 years.

(e) Worked to minimize enormous losses from influenza or shipping fever among horses, especially among animals shipped for war purposes.

(f) Is operating in 28 States under emergency funds to eradicate tuberculosis among cattle.

(g) Carried out extensive demonstrations of improved methods of cattle raising and dairying in the South as part of a program to encourage diversification in agriculture.

(h) Cooperated with approximately 100 cities in improving their milk supply, and with the Public Health Service and the War and Navy Departments toward insuring safe and sanitary dairy products for Army cantonments and naval stations.

(i) Conducted active work to develop pig clubs among children, teaching 92,000 boys and girls in 26 States to raise pure breeds and demonstrating the value of pure-bred stock and proper care, feeding, and management of swine.

(j) Encouraged poultry raising, especially in the South, through the organization of 15,000 children in 11 States as members of poultry clubs and stimulating poultry raising by general farmers and in urban back yards.

It also conducted special campaigns to enlarge the production of hogs and poultry, which yield quickest returns; advocated careful and intelligent feeding, to save food suitable for human beings and provide a use for products otherwise wasted; encouraged sheep raising for mutton and wool; made special efforts to increase beef production and aid breeders in procuring and placing breeding stock, with emphasis on the advantage to the general farmer of raising more animals; and conducted campaigns for greater production and fuller utilization of milk and other dairy products, the cottage-cheese propaganda being an example of how a largely wasted food, skim milk, can be made to play an important part to meet war-time needs.

The Bureau of Markets has given such direct aid to producers and consumers in solving problems in distribution and marketing that it is playing a most important part in the war program. Its work is of three types:

(a) Secures the facts as to the food supply, where it is and where it goes, and also as to the sources of textiles, particularly cotton and wool, so important in the present war.

(b) Renders service by market-news reports and market-inspection service.

(c) Enforces Federal laws as to cotton futures, grain standards, warehouse practices, and standard containers.

This bureau devised and carried through nation-wide food surveys, the first stock-taking inventory of our Nation's supply; helped city governments in solving local marketing problems; aided in disposal of surplus products from war gardens; fostered marketing by parcel post; has given particular aid in marketing and creating a demand for dairy products; has helped in the establishment of public markets. The machinery of the bureau is in active operation 24 hours every day 6 days in the week. It adapts itself to the hours of trade in the large cities and to the mail schedules of the specific rural communities where its representatives are located. It records actual facts and quotes prices, and in each phase of this service it is excelling any service ever before rendered in the same field. It issues biweekly reports on honey and on grain and hay, monthly reports of stockyard receipts, monthly reports of seed stocks and of cold-storage holdings, quarterly reports of the wool supply.

These reports constitute the first comprehensive public information of this kind in this country. These news services are conducted by telegraph and over 15,000 miles of leased wires are used 12 hours in every 24. Over 1,000 railroad superintendents assist in this work by reporting daily by wire the number of cars and destinations of live stock, fruits, and vegetables moving from their divisions.

This bureau has also taken up with the War Industries Board the question of the utilization of the low grades of cotton, of which a large surplus is accumulating, and has rendered much assistance and cooperation to the Food Administration, Grain Corporation, and various branches of the War Department with respect to their problems having to do with grain inspection, grain transportation, and grain grading.

The Bureau of Chemistry has devoted its activities during the past year largely to war-winning ends. To increase the supply and lessen the cost of pure food active assistance and cooperation have been given to manufacturers and handlers of food by helping them to avoid waste and spoilage, save valuable by-products, and ship certain perishable foods so as to arrive in good order. Much of its work has had to do with foods and the relative nutritive value of several substitutes for those foods which now have to be saved. Conservation of foodstuffs also has been demonstrated. It has been shown, for example, that wheat is neither necessary nor desirable as a feed to fatten chickens. It has made important analyses of food for other departments of the Government, particularly the War and Navy Departments, some 681 such analyses having been made in the last year; has obtained valuable information regarding the effect which variations in the compositions of leather and in tanning materials have on the wearing qualities of leather. Methods for determining the composition of leather and of testing its wearing qualities are being worked out. This work is proving of great value to the War Department in making specifications for shoes for soldiers. It has developed simple and inexpensive methods applicable to farm use for both waterproofing and mildew-proofing fabrics for wagon covers, tents, tarpaulins, and for other uses. Started as a project primarily for the farmer, it has developed information of great value to the War Department.

In an investigation to develop new and cheaper methods for manufacturing dyes, a new chemical process has been devised for the manufacture of phthalic anhydride, which is one of the most valuable compounds used in the manufacture of dyes. This process is now being tested on a large scale and promises to be the most economical one that has ever been used for this purpose. A new and valuable method for the production of color derivatives has been devised and this process has been tried upon a large scale. The results show that the process is extremely practical and produces some very valuable compounds which are used in the dye industry in a very economical manner. A process for the manufacture of indigo, some eight or ten million pounds of which dye ordinarily are consumed in this country annually, has been investigated with a view to its introduction.

The Bureau of Biological Survey has conducted a war on predatory animals, which destroy annually \$25,000,000 to \$30,000,000 worth of meat animals on the public lands in the West.

(a) Has originated and developed an organization for the control of predatory animals through a force of about 300 hunters and trappers.

(b) By trapping and shooting it has destroyed in this period 60,216 wolves, coyotes, bobcats, mountain lions, and other stock-killing animals, and has killed by poisoning great numbers of coyotes over extended areas.

(c) In addition to effecting a large saving of cattle, sheep, goats, horses, swine, and poultry, it has also controlled the spread of rabies in five States and greatly reduced the danger to human life from this disease.

In many States it has promoted extensive campaigns by poisoning for the destruction of ground squirrels and other rodents that cause losses to crops aggregating more than \$150,000,000 annually.

(a) In North Dakota organized campaigns against ground squirrels, in cooperation with the State extension service, resulted last year in the practical extermination of 77 per cent of the pests on 19,000 farms, representing 7,500,000 acres, thereby effecting an estimated saving of more than \$1,500,000 worth of crops.

(b) During the current year 33,000 farmers are cooperating in North Dakota covering an area of more than 13,000,000 acres, and in Montana more than 18,000 farmers are cooperating in a similar campaign.

It has demonstrated effective methods of poisoning jack rabbits, which destroy large quantities of wheat, barley, oats, alfalfa, and other growing crops and stacked hay, and has organized campaigns in farming communities against these pests.

(a) In one county in Oregon about 75,000 rabbits were poisoned the winter of 1915-16, at a cost of less than one-tenth of a cent each.

It has developed a very effective poison with which it has prosecuted vigorous campaigns against prairie dogs upon national forests and other public lands.

(a) On seven national forests in the Rocky Mountain States prairie dogs have been much lessened in numbers, thereby, according to an estimate of the Forest Service, improving the range for live stock fully 50 per cent.

(b) On more than 3,000,000 acres 90 per cent of the prairie dogs were killed by the first poisoning, at a cost of 5 to 10 cents an acre. Where repoinsoning was carried on it resulted in the practical extermination of the pest.

It has undertaken a nation-wide campaign for the more adequate control of house rats and mice, notorious destroyers of field crops, stored products, and poultry. It is now working to acquaint people with the seriousness of the losses and with simple and effective means of preventing them. Several States and many cities and communities are joining in this work.

This bureau is performing a great and invaluable service in saving crops already planted and growing, thereby contributing tremendously to the Nation's food supply.

The Bureau of Soils, the Bureau of Crop Estimates, the Federal Horticultural Board, the Weather Bureau, the Office of Farm Management, the Office of Public Roads and Rural Engineering, the Forest Service, all are rendering invaluable service in the prosecution of the war. The Weather Bureau has its experts at the front, where they furnish forecasts of weather conditions for the Artillery and Aviation Service. The Office of Public Roads and Rural Engineering, with its force of experts, has assisted the War Department in building roads at the 16 cantonments and is assisting daily in the collection of data and information for the use of the military authorities. The engineers of this bureau have assisted in redeeming, by drainage, and so forth, thousands of producing acres during the past few years.

The Forestry Service rendered tremendously important help by organizing, in cooperation with the War Department, the

Tenth Engineers, consisting of 1,200 men, and the Twentieth Engineers, consisting of 10 battalions of 750 men each—known as the forestry regiments—for service in France. Forest products are highly important in this war, and much technical information regarding wood properties, its strength, seasoning, and new kinds of wood suitable for rifle stocks, airplanes, vehicles, and ships is being furnished to the military authorities by the Forest Service of the Department of Agriculture.

It is impossible to detail within reasonable limits the full performance and activities of the Department of Agriculture in contributing its share to the winning of the war. I have but briefly outlined some of the more important achievements of this department, acting through its many bureaus and its trained force of 20,000 men and women, and in cooperation with its allies—the land-grant colleges and State commissioners of agriculture—and the loyal and patriotic farmers of the Nation in producing the food and feeds necessary to sustain a fighting Nation and, in a large measure, its allies.

The farmers of the country responded nobly to the suggestions and leadership of the organized agricultural agencies of the Nation and planted the largest acreages and produced the largest crops of most products in the history of the country. In 1917 there were planted 246,275,000 acres of the leading crops, an increase of about 24,000,000 acres over 1916. When reports are tabulated it will be found that the 1918 acreage will be still greater. In 1917 the yield in all cereals was a billion bushels in excess of the preceding year. The production of live stock was increased materially—horses, 1.7 per cent; mules, 2.1 per cent; milch cows, 1.7 per cent; and other cattle 4.5 per cent. Sheep increased 2.7 per cent and swine 5.7 per cent. The total value of agricultural products produced in this country in 1917 was very nearly \$20,000,000,000. This is more than was contributed to the wealth of the country by any other industry in raw materials and finished products.

The farm-labor problem, at all times serious enough, has been quite successfully handled through various agencies, so that there has been no great loss of acreage or harvesting on this account. The Department of Agriculture, through its farm-help specialists in every State, in cooperation with the agricultural colleges, the county agents, the Council of Defense, and the Federal and State Departments of Labor, has rendered important service in this connection. The department's farm-labor program divided the country into four farm-labor divisions, to wit: First, New England and Northeastern States; second, Southern States; third, North Central States; fourth, Western States. Each of these divisions is in charge of a representative through whom the activities of a region are coordinated, and who is able, through cooperating agencies such as chambers of commerce, and so forth, not only to supply large numbers of men for regular farm employment, but is also able to mobilize and shift farm and other labor from section to section as needed.

In a multitude of ways, through thousands of agencies, day and night, the United States Department of Agriculture is helping to win the war, ever on the alert to conserve what we have and to add every possible ounce to the world's food and feed supply.

AND WE ARE WINNING THE WAR.

Since the power of the United States, with its vast wealth and resources of men and supplies, has been thrown into the balance on the side of humanity and right, a tremendous change has come over the war. At the first our enemies scoffed at our efforts. The military crew in charge at Berlin, laboring under the psychological delusions that have characterized their every act in this war, made two cardinal miscalculations with reference to the United States. In the first place, they thought they could neutralize America from within and bully her from without—in effect, defeat us before we could get in the war. In the second place, they thought they could anticipate our action and end the war before our weight in the scale could be decisively felt. They miscalculated as stupidly and disastrously in the one as in the other.

The United States has accomplished what the world thought could not be accomplished, and did it in such a short time and with so little trouble that the results exceed the expectations of the most sanguine among our allies and even ourselves. Within a few weeks 2,000,000 brave American boys will be in Europe. Millions more have registered for military service with less excitement and trouble than would attend a national election, and these men are now being classified. We did not want to go into this ghastly business, but now that we are in we are going to clean it up. Already the tide of battle has turned and the Hun rapist and plunderer has been brought to bay and turned his face to the German frontier. It is not too early to say that Paris is saved, that the channel ports are saved, and that the smashing blows of the allied armies, under

the bravest and most competent leadership an army ever had, will now be continued with greater force as American soldiers come in ever-increasing numbers until the military power of the enemy and his dream of world conquest and dominion are completely crushed and shattered. There must be no compromise, no patched-up peace, no temporary arrangement that will permit a rehabilitation of German military power, but a complete victory, followed by a peace made on our terms.

In a speech on the food-control legislation in the House in July, 1917, I used this language:

Let us not deceive ourselves as to the importance of the struggle into which we have been forced against our desires. Let us not be misled by the peace talk periodically emanating from European sources. Let us not hug "the delusive phantom of hope" that the war will be over before we get into it, for peace is no more possible in Europe now than peace would have been possible in our own Civil War before the issues of slavery and secession were settled for all time. Out of this war must come more than a mere truce, more than a temporary and paper peace. There must come a new emancipation proclamation, striking from civilization forever the shackles of military autocracy. Either all the civilized world must come under the yoke of military despotism or all the world must be free, and the world can not be free until militarism is destroyed, until this frightful monster is obliterated. Without this new birth of freedom all this sacrifice and suffering and bloodshed will have been in vain.

The American mind, realizing now the real character and purposes of our enemy, hearing from the lips of our own boys the story of German village and murder, of rape and arson, is now made up. Germany, representing autocratic brute force and military power, must not win. If she wins it will prove that a military autocracy is the strongest form of government on earth and that free democratic governments are not able to maintain themselves in a crisis. But Germany can not win. The unconquerable spirit of our allies, who during four long and bloody years held the monster in check, is still unbroken. Imbued with new ardor by the brilliant performances of our boys in khaki they have again taken hope and the issue of the war is no longer in doubt. Let every man, woman, and child in America contribute every ounce of strength possible for the final effort and sustain in every possible way the boys at the front not only by furnishing material things but by believing sincerely in the things they are fighting for.

Speaking of the causes leading up to our participation in the war and what it would have meant to American farmers to have acceded to Germany's insolent demands, Secretary Houston, of the Department of Agriculture, in an address delivered before the State convention of the Iowa Bankers' Association, June 20, 1918, used the following forceful language:

It was from this feudal-minded, vain, insolent, and arrogant power, from the military overlords of Prussia, that the orders came in February, 1917, to us, to 100,000,000 of the freest people in the world. These orders were the final expression of Prussian whim: "Keep your people at home," they commanded. "Tie up all your ships except one. Strife it as I dictate; let it sail on the day I fix; send it to the port I designate. Tell your manufacturers to keep their products in their warehouses. Let your surplus foodstuffs go to waste. Tell your farmers to keep their millions of bales of cotton, their grain, and their meat at home till I order otherwise. Set aside international law and accept my law of necessity till I crush the great modern free States of Europe. Stand by till I finish with them, and then maybe I will attend to you. Although our spies are operating among your people, in Mexico, Japan, and elsewhere, even while you give hospitality to our ambassador, and although our agents are destroying your plants and our submarines are killing your citizens, stand aside! These are my orders."

What would we do about it? What answer would we make? What answer was there except one? Life is precious; but not at the sacrifice of everything that makes it worth while. National peace is desirable; but not at the cost of everything that makes a nation worth saving. No man worthy of the name of American citizen in such a situation could fail to exclaim with Patrick Henry, "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take, but as for me, give me liberty or give me death."

Misrepresentations of the National Security League.

EXTENSION OF REMARKS

OF

HON. ROSCOE C. McCULLOCH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 2, 1918.

Mr. McCULLOCH. Mr. Speaker, the so-called National Security League, a self-constituted organization with headquarters in New York City, has criticized certain of my votes on amendments offered to bills in Committee of the Whole House. This criticism is contained in a circular being distributed in my congressional district. I am not called upon to make an accounting to the so-called National Security League of New York City, but I want the people of my district to know the facts.

I have not voted against a single war or preparedness bill passed by Congress since I became a Member. This is proven by the CONGRESSIONAL RECORD. Out of the hundreds of amendments of every kind, nature, and description offered to these bills while they were being considered in committee, the National Security League of New York City picks out six amendments, four of which were defeated, and a resolution which never came to a direct vote, and says I voted "wrong," without telling how I voted.

At this point I want to call attention to a resolution in regard to the National Security League, which has been introduced in the House of Representatives and is now pending before the Judiciary Committee of the House. Here is the resolution, which was introduced by Congressman FREAR:

Whereas the National Security League, a self-constituted political body, has given to the press of the country an infamous screed wherein practically 90 per cent of the Representatives of the House are publicly branded before the world as disloyal men; and Whereas the National Security League has caused to be widely published a statement of self-determined percentages of patriotism, computed under its authority, wherein 47 States of the Union are rated disloyal, based on such votes and computations; and Whereas charges have been publicly made that this "league" has expended large sums of money, reaching \$1,000,000 or more, in carrying on its propaganda, and in its active efforts to defeat Members of Congress under a cloak of "loyalty," and that such expenditures are made contrary to the Federal corrupt-practices act; and Whereas said "league" has been publicly charged with being composed of and financed by war profiteers living in New York and elsewhere and inspired by corrupt purposes unrelated to loyalty:

Resolved, That the Judiciary Committee of the House be empowered and instructed to bring before it the officers and directors of the National Security League and such members and witnesses as may have knowledge of its activities and ascertain what efforts have been made to improperly influence the election or defeat of Representatives in Congress, the persons contributing to such funds, the amount of such expenditures, and all other proper information. That the committee is authorized and empowered to issue subpoenas, swear and examine witnesses, and to procure all documents bearing upon the matters referred to, and to employ needed stenographers and clerks in the prosecution of such inquiry.

Congressman FREAR, speaking in support of the resolution, among other things, said:

This is no time for recrimination; but the days are too critical for a selfish, war-profiteering league to denounce as "disloyal" practically 90 per cent of the membership of this House who have been praised by the President in repeated messages for their patriotism, and to traduce 47 of the 48 States. That charge against the President would lodge the slanderers in Leavenworth. Against the Supreme Court it would mean criminal contempt proceedings. Directed against a coordinate branch of the Government, a part of the greatest legislative body in the world, during these hours of national stress and peril, it invites active prosecutions by the Attorney General's Department.

No one charge since the beginning of the war has given more aid and comfort to the enemy than the infamous libel that this House individually or collectively is 90 per cent disloyal for voting its convictions, under its oath of office, either prior to or since the declaration of war. The jurisdiction of the House as to its own membership is supreme, and in order that the election activities of this league may be reached I have offered this resolution of inquiry.

NATIONAL SECURITY LEAGUE V. PRESIDENT WILSON.

The National Security League of New York City has branded 90 per cent of the Sixty-fifth, or present, Congress as "disloyal." Here is what President Wilson has to say bearing upon the loyalty of the present Congress. Whose opinion do you prefer?

The Sixty-fifth Congress deserves the gratitude and appreciation of a people whose will and purpose I believe it has faithfully expressed. One can not examine the record of its action without being impressed by its completeness, its courage, and its full comprehension of a great task. The needs of the Army and the Navy have been met in a way that assures the effectiveness of American arms, and the war-making branch of the Government has been abundantly equipped with the powers that were necessary to make the action of the Nation effective.

I believe that it has also in equal degree, and so far as possible in the face of war, safeguarded the rights of the people and kept in mind the consideration of social justice, so often obscured in the hasty readjustments of such a crisis.

It seems to me that the work of this remarkable session has not only been done thoroughly but that it has also been done with the utmost dispatch possible in the circumstances or consistent with a full consideration of the exceedingly critical matters dealt with. Best of all, it has left no doubt as to the spirit and determination of the country, but has affirmed them as loyally and as emphatically as our fine soldiers will affirm them on the firing line.

CIRCULAR VICIOUS.

The circular this organization has issued is false in its statements of facts, and is therefore vicious. It is manifestly false, for the following reasons:

First. Because it refers to but eight votes out of many hundreds. Six of the votes were on amendments to bills in the committee and not on measures at all, as the circular states. Four of the six amendments were defeated. It also says that they were "the principal preparedness and war measures," which is so far from the truth that the statement on its face, to anyone who knows anything about the facts, is simply ridiculous.

Second. Instead of telling how Members voted on the amendments it says Members voted "wrong" or voted "right" without any explanation of the bill or as to how they voted.

Third. The circular does not state the facts accurately, absolutely misstating in a number of instances what was really before the House. It deals in half truths, the worst form of misrepresentation.

Fourth. Six of the votes named were on matters that came up before the declaration of war and five out of the eight were on matters considered by Congress almost a year before the declaration of war.

It is interesting to note that of the votes the circular approves four were on amendments which were opposed by the administration and therefore Members who voted as this organization desired opposed the administration. The circular, using eight propositions as a basis, gives full approval to but 47 Members of Congress out of the total membership of 435. In other words, there were only 47 Members of Congress who voted "right," according to the circular, and 300 who voted "wrong." Of the 47 Members who are credited with having voted "right" only 4 were Democrats, and they were all from New York and New England. Of the 210 Republican Members of Congress the circular only gives full approval to 43, and of these only 4 reside in districts west of Pennsylvania.

I voted for the declaration of war. Therefore the votes of mine which the circular criticizes were all on amendments to bills offered in committee, except my vote against tabling the McLemore resolution. Of the votes mentioned not one except the vote against tabling the McLemore resolution could by the wildest stretch of the imagination be regarded as an anti-administration vote. My vote against tabling the McLemore resolution, for the purpose of discussion, was cast over a year before we entered the war, and was discussed two years ago during my last campaign from one end of my district to the other, and I was reelected by close to 7,000 majority when my district went to President Wilson by close to 8,000 majority.

I shall analyze the eight propositions in the order in which they are mentioned in the circular.

No. 1. The circular says: "McLemore resolution, March 7, 1916. This resolution was to the effect that American citizens should forego their natural, legal, and constitutional rights to travel on the high seas."

The McLemore resolution came before the House of Representatives about one year and one month before the declaration of war. The circular marks me as voting "wrong" on the McLemore resolution. It does not say what is meant by voting "wrong," but attempts by the language used to leave the inference that I favored the McLemore resolution. The facts are, as I announced at the time, that I would not vote for the McLemore resolution under any circumstances, because I was opposed to its provisions. I did not vote for it, but I voted not to table it, in order that a full and complete discussion of the subject of warning American citizens of the dangers of traveling on armed vessels of belligerent countries could have been had, as the President requested. Had the McLemore resolution not been tabled, and had it come to a direct vote without amendment, I would have voted against it, and I so stated at the time, as the CONGRESSIONAL RECORD will show, and I so stated in every speech I made during my last campaign.

No. 2. The circular says: "Kahn amendment to the Hay Army bill, March 23, 1916. This amendment sought to increase the Regular Army to 178,000 or more, nearly approaching the recommendation of the General Staff of the Army."

No such amendment was ever introduced by Mr. KAHN or anyone else. The circular marks me as voting "wrong" on such an amendment, which it says was considered over a year before the declaration of war. The Committee on Military Affairs reported the Hay Army bill unanimously from the committee, which provided for increasing the Regular Army to 140,000, as recommended by the Secretary of War. During the consideration of the bill Mr. KAHN, of California, a Republican, offered an amendment increasing the number to 220,000, which amendment was defeated by a vote of 82 to 155, by tellers, in the committee. Before voting on the bill, Mr. MANN, of Illinois, asked unanimous consent for a record vote on the Kahn amendment, which is no doubt the amendment the circular is trying to refer to, and the vote was taken on the amendment, and it was defeated by 213 to 191.

The circular evidently approves voting for this amendment. Such a vote was an anti-administration vote, as the administration approved the bill as reported and was opposed to the amendment, which, it was argued on the floor, would hopelessly complicate the Army bill. I voted against the amendment, as it was my policy to support the committee, which had investigated the requirements and which was backed by the War Department and its experts.

No. 3. The circular says I voted "wrong" on the "Brandegge amendment to the Hay-Chamberlain Army bill, April 18, 1916. This amendment provided for an Army of 250,000 as against 140,000."

When the Hay Army bill was returned to the House from the Senate on May 8, 1916, almost a year before the declaration of war, objection was made to this increase because it was contrary to the recommendation of the War Department and the Committee on Military Affairs of the House. It was claimed that its language would provide for a large number of very high promotions for Army officers. The amendment was defeated by a vote of 222 to 141. I voted against the amendment. The circular approves voting for the amendment, which was voting against the administration and the recommendation of the War Department.

No. 4. The circular says I voted "wrong" on "section 56," providing for a volunteer reserve army wholly under Federal control, April 18, 1916.

This amendment was considered almost a year before the declaration of war, and was an amendment intended to destroy the National Guard and State Militia by substituting a volunteer army composed of not to exceed 600 officers and men from each congressional district. I was appealed to by the National Guard of the State of Ohio to oppose this amendment. It was contended that our State had spent millions of dollars developing the National Guard in Ohio. A large proportion of the National Guard of the United States, including the Ohio National Guard, was on the Mexican border at the time this amendment was considered. It was claimed that if this amendment, known as "section 56," were adopted, it would complicate the military situation. The President vigorously opposed this amendment, and it was known as an anti-administration amendment. I voted against the amendment, and the circular approves a vote for the amendment.

The amendment was defeated by a vote of 251 to 109 on May 8, 1916 (CONGRESSIONAL RECORD, p. 7601). The National Guards of the various States have furnished close to 500,000 men in the present crisis, trained and experienced, and after the splendid record of the Rainbow Division, the soldiers of which represent almost every State in the Union and which is on the battle front at this very hour rendering conspicuous service, of which the whole Nation is proud, I do not believe that anyone need apologize for opposing the destruction of the National Guard. Ohio is proud of the Ohio National Guard now in action, and we all join with Gov. Cox in the following statement issued on Monday of this week:

OHIO IS PROUD OF YOU.

This was the gist of a message sent to Maj. Gen. Farnsworth, commanding the Thirty-seventh Division in France, by Gov. Cox to-night. This division is made up of former Ohio National Guard troops that have distinguished themselves in the present Yank drive. The cable follows: "The whole State is filled with pride by the gallant conduct of our troops. Please extend to the boys our gratitude and affection."

No. 5. The circular says I voted "wrong" on a "motion to recommit the naval appropriation bill June 2, 1916." This motion was designed to instruct an increase in the Navy beyond what was provided in the original bill.

The naval appropriation bill of 1916 was taken up by the House on May 27, 1916, almost a year before the declaration of war (CONGRESSIONAL RECORD, p. 8783), providing for increased appropriations for the Navy. The bill was reported with the approval of the Navy Department after extended investigations by the Committee on Naval Affairs. This committee had spent weeks on the bill with the assistance of the Navy officers and experts. The House, in Committee of the Whole, had been considering the bill for days, and just as the House was ready to vote on its final passage Mr. BROWNING of New Jersey moved to recommit the bill with instructions to increase the amounts of the various items approximately \$50,000,000, which meant asking the House to accept without consideration or explanation changes in the bill the effect of which would have been to destroy the work of the committee and the Navy Department. The chairman of the Committee on Naval Affairs vigorously opposed the motion. It was distinctly an anti-administration motion, and so understood by everybody, and it was defeated. I voted against it. The circular approves voting for it.

No. 6. The circular says I voted "wrong" on the "Cooper amendment, March 1, 1917." This amendment was designed to prohibit to American ships their legal right to carry arms or ammunition in their cargoes.

The statements in the circular as to the provisions of the Cooper amendment are entirely contrary to the facts. The Cooper amendment was as follows:

Provided, That no ship of American registry, armed in the manner aforesaid, shall carry cargo consisting in whole or in part of arms or ammunition consigned to a belligerent country or to a citizen thereof.

This amendment was offered to the armed-neutrality bill, for which bill I voted. The armed-neutrality bill was intended, ac-

cording to statements made by the President, as the last step toward keeping this country out of war. The Cooper amendment proposed that we should not arm ships to carry munitions of war to belligerent countries. He argued that to arm ships for such a purpose was an act of war. Mr. Flood, chairman of the Committee on Foreign Affairs, while the Cooper amendment was being considered, said:

I do not believe that the President intends to convoy merchant vessels that carry munitions of war or to supply guns and ammunition to such vessels. Good international lawyers contend that to convoy a vessel loaded with arms and ammunition is an unlawful act; that it is an act of war.

Under the circumstances I voted for the amendment. The amendment was defeated, and I then voted for the armed-neutrality bill.

No. 7. The circular says I voted "right" on the declaration of war against Germany, April 5, 1917.

I voted for the declaration of war.

No. 8. The circular says I voted "wrong" on the "Kahn amendment to the conscription act, April 23, 1917. This provided for the raising by conscription of the necessary army to give effect to the declaration of war."

There never was a more false or misleading statement made than this statement attempting to define the terms of the Kahn amendment. The Kahn amendment proposed to strike out the provisions of the conscription bill authorizing the President to call for volunteers. The conscription bill reported by the Military Affairs Committee of the House, and which was being considered in Committee of the Whole when the Kahn amendment was proposed, authorized the raising of an Army both by conscription and by volunteers. Had the volunteer provisions not been stricken out of the bill, we still would have had conscription, and the President would have had the additional authority to call for volunteers, which the War Department did, in fact, under the law. There was no proposal to my knowledge at any time made to eliminate the conscription provisions of the bill. This vicious circular would have people believe that those who voted not to strike out the volunteer provisions of the bill were against the necessary army "to give effect to the declaration of war." In other words, everyone who had an idea contrary to that of the National Security League is disloyal.

I voted for conscription, and I also voted for the provision authorizing Roosevelt to organize and utilize the hundreds of thousands of volunteers he had already enrolled who were ready for active service. I believed that the President should have the power to call for volunteers if he saw fit to do so, and I therefore voted against the Kahn amendment, which took that power from him; but it is interesting to note that in spite of the hostility of the National Security League to volunteers that volunteers have been accepted by the War Department right along in all of the various branches of the service, and that there are now in the service thousands upon thousands of men who were volunteers and accepted as such.

Out of the scores and hundreds of amendments to the various provisions of the 126 bills on war and preparedness that have been passed by the Sixty-fourth and Sixty-fifth Congresses, the National Security League picks out six amendments, four of which were defeated, only one of which was before the declaration of war, and criticizes my vote on these six. Four of the votes criticized were votes I cast while supporting the administration and the War and Navy Departments in their efforts to work out a preparedness program that would be feasible and meet the necessary requirements. All the amendments except one were voted upon before the declaration of war, and four almost a year before the declaration of war. Not a word is said in praise of the fact that during my entire service in Congress I have supported every war and preparedness bill that passed the House, and that I did not vote against a single war and preparedness bill passed by Congress. If I had permitted the lobbyists of the National Security League to tell me what to do and how to vote, and been their rubber stamp, I would probably have received their praise and not their censure. Had I voted against the vastly important revenue bill passed May 23, 1917, and against increasing the income tax on incomes above \$20,000 to 25 per cent, as did 40 per cent of the 47 Members who have been given a "clean record," I would have probably met the test of the National Security League and Wall Street war profiteers.

I desire that the National Security League and everybody else, including the Wall Street war profiteers, should know that so long as I remain in Congress my actions shall be governed by my own investigations, my conscience, and what, according to my best judgment, I believe to be for the best interests of the people of my district and the country, and I shall not permit at any time or under any circumstances the war profiteers of Wall Street, New York City, to tell me how to vote.

The Effect of the War on the American Melting Pot, and My Record in Congress.

EXTENSION OF REMARKS

OF

HON. DAN V. STEPHENS,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 28, 1918.

Mr. STEPHENS of Nebraska. Mr. Speaker, I have the honor to represent a district composed of the representatives of most every civilized nation of the world. The foreign born are not in the majority by any means, yet with their immediate descendants they do represent a majority. This is not only true of the district that I represent, but it is true in the main of many sections of the United States. The citizens of this great Republic are either immigrants or descendants of immigrants. We have come from the ends of the earth to enjoy the blessings of liberty in a new land. The only difference between us is some came sooner than others, and none of us have been here very long. The Republic is still young, though it is the oldest among the republics of the world. Among my constituents are the representatives of practically all the countries of Europe, and their sons to-day are on their way back to Europe bearing the flag of their adopted country in one hand and the sword of justice in the other. It is an inspiring spectacle, because in this example we have proof of the permanence of our institutions. It shows clearly that the great American melting pot is in fact fusing our people into one type, the true American, all citizens of a nation which has for its battle cry justice and liberty now and forever.

These people constitute a courageous type who possessed the moral fiber to emigrate to a strange land to make their homes where the blessings of liberty were guaranteed by a system of government the people are willing to protect with their lives and fortunes.

The great melting pot has not been boiling with an intensity that would produce quick amalgamation of the various nationalities who came to us, with the result that connections with the homeland were not unbroken. Many old-country customs cling to the immigrants for years after their adoption as citizens of America. Not until this world war came upon us has the heat of the melting pot been sufficiently great to fuse our people completely into an American type. After the war all hyphens will be forgotten, we will have washed them out in a baptism of blood, proving our right to the claim to citizenship in this great Republic.

Many political students of international politics prophesied that America could not withstand a great world war on account of our foreign-born population. The war is advanced sufficiently to prove the utter error of these prophecies. There is a great rivalry among the various groups of citizens of immediate foreign descent to see which can do the most for our cause in this war. Much to the disappointment of the Kaiser, even the German-born citizens of America are standing as a class back of America and against Germany. Only here and there are there examples of disloyalty to be found, which is due in the main to ignorance. No German-born citizen who has education enough to understand the issues involved has wavered one jot or tittle in his loyalty, unless, of course, he is deliberately betraying his country.

When the war came upon us our many-hued citizenship fused at white heat into the American type and shouldered arms and started for the front. They were Celt and Teuton, Slav and Latin, Greek and Syrian, black and red, sons of all the people making up our citizenship in that great army of liberation that set out under the Stars and Stripes to prove that our Government was not a pretense, but in fact one conceived in liberty through the blood sacrifices of our forefathers. One can fancy the spirit legions of Washington leading our boys of to-day on the battle fields of France. It is a marvelous spectacle to see these adopted sons of many lands offering their lives for the defense of our common country. There are a few disloyal here and there, but they are not confined to any particular group. Such disloyalty is due either to ignorance or a deliberate purpose to serve Germany. This is found as often among old American families as it is among foreign-born citizens. But it is not of these disloyal ones that I wish now to speak, but of the patriots who are making great sacrifices for the country.

The burden laid upon the German-born citizen is greater than that laid upon other classes for the reason that they are naturally liable to unjust suspicion of disloyalty if they even

stop to question a method of procedure. No matter how loyal a German-born citizen is or how much he may have sacrificed, fanatical and unthinking patriotic people sometimes do not make proper discrimination between the loyal German American who is sending his sons to fight the battles of his country and doing his duty at home in supporting the war and those who are not loyally doing so. Merely because a man once owed allegiance to the Kaiser is no reason why he is in sympathy with him now. The chances are he left Germany to escape the sins of the Kaiser and is glad now to fight for the land of his adoption. This is true if he is capable of understanding. When the German-born citizen, in the face of his old country training and attachments, overcomes these obstacles and burns all the bridges, both in theory and in practice, behind him and stands up squarely for America in this war against his native land and blood and kin, he has done more for America than any native born is called upon to do. To stand for America a native citizen has only to stand for the only country he ever knew. He stands for his home and fireside, his family, friends and neighbors, and the institutions that have made their citizenship worth while. It is natural for him to do so. It would be unnatural for him to do otherwise.

The naturalized German-American citizen stands for exactly the same thing, and in addition thereto he must conquer his own feelings as related to his native land. He loves his adopted country and appreciates beyond words the blessings he enjoys here, yet the memories of his childhood and youth are, like our own, strong within him. The memories of the old homestead, the hills and valleys of his homeland, the faces of his schoolmates, the first-love passions of young manhood, all are a beautiful dream to him and a part of his life. He lays them all as an offering on the altar of his country and sends his sons to sacrifice their lives, if need be, that the institutions of his adopted country may survive. Has such a man not passed the acid test of patriotism? He not only overcomes the natural inclination of the heart to support the Fatherland in the war and sends his sons to fight the Fatherland, but sometimes sends them against his own blood and immediate kin. Examples are numerous, and to these German-Americans who have so nobly taken their place back of the American cause without doubt or hesitation as "o their duty we owe the highest respect and appreciation. Such citizens have won a great battle in their own hearts and are now aiding their adopted country to win with arms the physical battle with the German oppressor.

These German-Americans—those who are bravely backing this Government not because they have to but because they want to do it—are making a sacrifice of their tenderest memories, of their own first born in effect, as did Abraham of old, and to them I pay this tribute. To them I bow in respect and confidence. They have passed the acid test. They have paid the price of American citizenship in a blood offering of their own sons to the cause of human liberty in the mighty battle now being waged against the Prussian war lords of their native land.

A FAMILY TRAGEDY.

Here is a sample tragedy in a German-American home in the district I have the honor to represent, where 19,000 foreign-born citizens of Germany and Austria live. The mother wrote me thanking me for assistance in securing her allotment made by her last son to enter the Army. Two former sons had purchased so many liberty bonds, she proudly informed me; they could not allot her any of their salary. Her husband was 60 years old and crippled, and had served three years in the Royal Guard for the present Kaiser many years ago. She had two children to support not yet of age. But she was proud that her last boy was in the American Army, and glad that the United States was helping her with the money to support herself and family. In concluding she said her last son had tried to enlist three times, being rejected on account of near-sightedness; but the draft board finally accepted him. She told me her three brothers are now fighting in the German Army, her eight cousins had been killed in the assaults on Verdun, and that her father lies buried in France.

As the full significance of the tragedy this brave woman was passing through was borne in on me through the lines of her letter that had been so laboriously penned, I bowed my head in humility in the presence of the evidence of such a sacrifice so bravely and wholeheartedly made for her country as I realized in comparison the poor showing I had to offer myself. She is old and with two children and a dependent husband to support. She was entitled to keep one of the boys at home, yet she had not asked to have her last son placed in a deferred classification, but sent them all out in the cause of America, her adopted coun-

try, to fight the German invader, in whose armies her father and eight of her cousins had been killed and her three brothers still fought.

She told me in her broken English, "I will have revenge. The Kaiser has killed my people after making slaves of them, and now he wants to enslave America, too, this land where I have been so happy and free." She understood the situation. Her brothers were forced by the Kaiser to fight, not for human liberty, as we fight now, but for human slavery and conquest. They have no heart in their struggle and are forced to give their lives to a cause that has outraged all liberty-loving people in the world. She loves her homeland and her blood kin that the Kaiser and his war lords have not yet sacrificed, and she knows exactly how to help set them free. She knows that when America strikes she strikes only for humanity's sake. She knows America never waged a war for conquest. She knows America fights only for the sacred principles of justice and humanity, and that by assisting America in this struggle she is sure to help her people in Germany to become free like the people of America. Her simple faith is an inspiration, her sacrifice beyond price. To her I pay my highest respect.

She is not alone in her patriotic fervor for America. Tens of thousands of German Americans are loyal to the core, and their sons form legions in our armies of freedom now in France. Tales of their heroic exploits come back to us daily from the battle fields. Some of these German-American boys fighting in France have been given the highest honors as recognition of their heroic deeds. The daily casualty lists contain German names among the American wounded and killed in such large numbers that no further proof is needed to show that America is united as one man against the world's common foe to freedom, the German Empire. The blood kin to Germany in America condemns Germany as the world's freebooter.

ALL NATIONALITIES UNITE.

The stories of heroism of German-American boys is only equalled but not surpassed by the native American boys and the sons of foreign-born citizens of neutral countries. They all fight alike for the ideals of America, Celt and Teuton, Slav and Latin, Greek and Syrian, black and red, all in the great American melting pot, striking shoulder to shoulder the shackles from the oppressed people of the world. The story of Private Lenart, a German-American boy of Chicago, who single handed took a whole company of the German Army prisoners and marched them into the American lines, is told and retold with pride by all Americans. Another German-American boy, so undersized he barely succeeded in getting into the Army, slipped out of the American trenches one dark night, crawled over no man's land, under the wires, and armed with nothing but his revolver and knife, dropped down into the German trenches and astonished the Boche by telling them in good German they were a pack of damn fools to be fighting for the Kaiser—that the thing to do was to surrender. The courage and determination of this young American so completely upset the Boche they forgot to shoot him or take him prisoner until it was too late. His arguments were too much for them, and the result was 16 of them crawled back with him over no man's land and surrendered.

These stories are coming back to us in such great numbers they can not all be printed, and they prove to us beyond doubt that the great American melting pot has fused our people into one great mass dominated by the American ideal.

The Bohemians are to-day furnishing the most marvelous spectacle of patriotic service the world has ever seen in the efforts they are making to free their homeland. There it lies in the heart of Germany and Austria, utterly and completely shackled. Not a man who lives there dares raise his voice or hand in protest. They are all forced into the German and Austrian armies. Those who are left there can not help to free their country, but their brave brothers who have journeyed out to make homes among the free peoples of the world can help, and it is the Czecho-Slavs (Bohemians) from free countries who have formed a remarkable army of liberation in Russia.

Tens of thousands of the Czecho-Slavs were taken prisoners by Russia in the beginning of the war, and these prisoners now in Russia have made up little armies, and these little armies are strung out over a 10,000-mile line, reaching from eastern Germany across Siberia to the Pacific at Vladivostok. In many places these little army groups of patriots are hundreds of miles apart with a wilderness of waste land between them, without arms or adequate supplies, but they are making a mighty struggle to connect up these small groups of men and establish order in that vast region. America is hurrying help to them,

and when one contemplates this vast region and these brave men, constituting only a speck on the landscape, struggling there in the hope that they may save Russia from the iron heel of the invader and thereby enable the allied armies to set Bohemia free, he is thrilled with admiration. In those armies here and there are brave men from America, citizens of the United States—Bohemians—who have gone with our forces and are fighting in the dismal swamps around far-away Archangle under the Arctic Circle, or they are of the advance guard who hurried away as free lances to help bring to Bohemia the blessings enjoyed by a free country. It is a most marvelous spectacle of a revolution taking place without the bounds of Bohemia in behalf of Bohemian freedom. It is an inspiration and a source of great pride to all Czecho-Slovak people the world over, and especially to the splendid Bohemian-American citizens of my own State.

The Danes, Swedes, Norwegians, French, and English are all courageously bearing their share of the burden of this struggle without complaint. They view the man who complains of his modest burden as possessing a yellow streak, and invariably remind him of what this war for freedom is costing some people. They are apt to recount a story like this one told by Congressman FERRIS:

One day recently a few gentlemen were visiting the Walter Reed Hospital here in Washington, where fourteen hundred wounded and sick soldiers were quartered. One bright-faced soldier boy smiled up from the covers so cheerfully a visitor told him he looked well enough to be up. "Can't you walk?" he asked. "Don't know," cheerfully answered the soldier. "Haven't tried yet," and he threw back the covers showing both legs were off below the knees. The visitor was shocked and apologized for his remark, as he realized the tremendous price this young man had paid that we may continue to enjoy the blessings of liberty. "Oh, that's all right," replied the young man laughing, "I am lucky. Why, I offered my life to my country and it has exacted from me my legs only."

That group of men stood there awed in the presence of a hero who had given so much to his country and who still felt he had not yet given enough. He had offered all he had to give—his life—and I pledge him now that so long as I live I will do my best to show him that his country is grateful for his great service to it.

PEACE TERMS.

The sacrifices that have been made for the sake of the principles upon which the governments of free peoples rest are beyond price. Only God himself can measure what the war has cost humanity. It has cost so much the price of peace should be fixed on terms so absolutely clear and comprehensive that they will forever constitute a beacon light to all mankind. The terms should give a positive guaranty to all people of the world that they shall forever be allowed the blessing of a government founded on liberty and justice. I would have the peace made in Berlin after the German military forces have been completely beaten and scattered or surrendered as prisoners of war. We would then be in a position to write an "International constitution," similar to the American Constitution, providing for a league of nations similar to our league of States of the Union. Such a constitution or league of nations would be backed up with a military and naval force sufficient to keep the nations of the world in order. Under the constitution liberty and justice would be guaranteed to every nation, great and small. The nations would no longer maintain great armaments any more than do the States of our Union. Their security would rest in the guaranty of the nations of the world, backed by force, that they could enter into the pursuits of liberty and happiness without outside interference. A peace that does not justify the sacrifice of the millions of lives lost in this war would be a crime of the first magnitude. It would be a base betrayal of our own beloved boys who have given their lives with a distinct understanding of the objects of the war, which have been so clearly set forth by President Wilson, the acknowledged leader of all the allied nations engaged in this struggle for human rights. The President has set forth the objects of the war so clearly in his Mount Vernon speech and in the one delivered at New York September 27, 1918, in opening the fourth liberty loan, and these views are so universally understood by the people it would appear that there can be no doubt but the terms of peace when the enemy has been conquered will be satisfactory to all. I have the utmost confidence in President Wilson and believe that God raised him up in this hour of great peril to lead the races of men into a safe harbor. I indorse absolutely his public utterances on the objects of the war and the sort of peace we shall make, and I here and now pledge him my unqualified support to that end.

RECORD OF ACCOMPLISHMENTS.

It is easy for one to preach but quite another thing to practice what he preaches. There is no one question the American people are more interested in right now than the question of winning the war. Cheap politicians and irresponsible persons will attempt to begot the issues before the country, but they are not likely to succeed. They will attempt to drag into the question other subjects that are of no consequence if the war is not won, and thereby distract the country from the real issue of "winning the war." The people should be warned against these machinations.

The President of the United States is Commander in Chief of the Army and Navy, and under the Constitution he can not be discharged, even if there are those among us who would like to discharge him, until his term ends two years hence. Therefore to win the war we must all stand back of the Commander in Chief and give him the support he demands in order that we may concentrate our efforts and deliver the greatest possible blow to the enemy. Some, for the sake of office, say his political enemies should be placed in power over him by electing a Republican Congress, thereby dividing the Government against itself in the face of a deadly foe, but the common sense of the people undoubtedly will lead them to do otherwise. They certainly want the Government to work as harmoniously as possible while this great struggle is on. To this end I have given my unqualified support to the President in placing this country on a war basis. As I stated before, it is easy to preach but quite another thing to practice, but in this case I offer my record in Congress, which my constituents have a right to examine, as proof that I practice what I preach.

I append herewith the legislative program put through the House during the two last Congresses. These acts constitute in the main the war program. I supported every single war measure of every kind and character, and upon the most important ones, such as the declaration of war, the selective draft, the embargo on arms and ammunition, and so forth, I made speeches. Some minor measures, or even important ones, may be omitted from this list, but whatever they are or may be, if they were war measures sought by the President, I supported them. Since the war begun the President has not asked for support that I did not give him.

WAR LEGISLATION, SIXTY-FOURTH AND SIXTY-FIFTH CONGRESSES, WHICH CONGRESSMAN STEPHENS SUPPORTED.

SIXTY-FOURTH CONGRESS, FIRST SESSION.

1. National-defense act, for Regular Army and to Federalize the National Guard.
2. National-defense act, authorizing the President to use the armed forces of the United States in Mexico.
3. National-defense act, providing for the construction of a Government-owned armor plant to free the Government from the shackles of the Steel Trust.
4. National-defense act, to further improve and enlarge the National Guard and Military Establishment.
5. National-defense act, for greatly increased fortifications.
6. National-defense act, to pay families of National Guard on duty in Mexico.
7. The shipping bill, for the creation of the United States Shipping Board and the construction and equipment of shipyards. This bill for the creation of a merchant marine was held up by Republican opposition in Congress for nearly two years, thus delaying our building program and making it impossible to immediately transport our troops to Europe after we got into the war. We would now have hundreds of new ships for service had this bill passed at once.

SECOND SESSION.

8. Appropriation bill for extension of fortifications.
9. Bill to arm merchant ships against attacks of submarines. This was the first step to force Germany to recognize our rights. Ten Republicans and two Democrats voted against this bill.
10. Cooper amendment to bill arming ships provided that these ships should not carry arms and ammunition to the allies. If passed, it would have crippled the allies and aided Germany. There were 122 Republicans voted for it and 55 Democrats. I voted against the amendment.
11. Bill for raising revenue for expense of Army and Navy and for fortifications. This was a new bill levying additional income and excess-profits taxes.
12. Bill for greatly increasing appropriations for Navy. This bill provided for a three-year building program.

SIXTY-FIFTH CONGRESS, FIRST SESSION.

13. Resolution declaring war against Germany. There were 31 Republicans and 17 Democrats who voted against war.
14. Bill providing for first liberty loan to cover cost of war.
15. The espionage act, to punish conspirators, spies, and traitors.
16. Bill providing for selective draft to increase Military Establishment of country. I voted for this and made a speech on the subject.
17. Military appropriation to cover added expenses of organizing the Army.
18. New revenue bill, to provide for additional tax to support the war.
19. The war-risk insurance bill, made necessary on account of the great risk and danger to shipping by German submarine policy.
20. The food-control bill, which made it possible to feed the allied armies and stabilize prices at home and abroad.
21. Bill to increase the enlisted strength of the Navy and Marine Corps.
22. Trading-with-the-enemy act, to define, regulate, and punish those attempting to trade with the enemy.
23. Bill providing for second liberty loan.
24. Bill to take over foreign vessels in United States ports.

SECOND SESSION.

25. New revenue bill providing for increase of war expense.
26. Bill to punish for destruction of war material.
27. Bill for the creation of War Finance Corporation, made necessary to finance the great war industries of the country.
28. Bill to condemn land for the construction of nitrate plant making war explosives.
29. Bill calling into the military service of the United States the Philippine military forces.
30. The daylight-saving act, which has resulted in saving a vast quantity of coal. I assisted in reporting this bill from the Committee on Interstate Commerce.
31. Bill providing for the operation of the railroad systems of the country. This was a bill of vast importance in winning the war. I assisted in reporting it to the House.
32. Bill creating Bureau of War-Risk Insurance for insurance of those engaged in the Army and the Navy of the United States. This is a bill that will replace pensions to a large extent. It was reported by my committee, Interstate and Foreign Commerce.
33. Bill for the promotion of our export trade.
34. Bill creating a system of education for the rehabilitation of soldiers and sailors. A humane act of far-reaching importance.
35. Bill authorizing Emergency Shipping Board to take over lines of steamship companies.
36. Bill providing for the consolidation of Government bureaus to facilitate the conduct of the war.
37. Bill to provide for housing war workers and war industries.
38. Bill providing for third liberty loan.
39. Bills providing for appropriations for Army and Navy.
40. Bill providing for the fourth liberty loan.
41. Bill providing for \$8,000,000,000 revenue measure just passed by the House.

This record of constructive legislation has enabled the Commander in Chief to prosecute the war with the utmost vigor. The results he has obtained surpass anything ever dreamed in the history of the race. I am proud to have contributed my small part to this success.

Whoever has been right, and in this world of error no honest man is wrong, I have not been inconsistent; and whoever has been false, and no honest man is open to that charge, I have not been guilty of falsification. The people shall say.

EXTENSION OF REMARKS

OF

HON. BENJAMIN C. HILLIARD,
OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 3, 1918.

Mr. HILLIARD. Mr. Speaker, near the close of the last campaign, in a speech heard by thousands of people in Denver's great auditorium, I pledged myself to vote against war and conscription, and declared that I would die in my seat in Congress before I would vote to send American boys to fight in the trenches of Europe. At that point in my address the audience stood and cheered as they had applauded no other statement by any speaker in Denver during the campaign. That night Senator SHAFROTH, Gov. Gunter, and others also spoke. At the close of the meeting a member of the Colorado Supreme Court clasped my hand as a father might, and with tear-glistening eyes said that in soul-stirring and heart-gripping thought my speech was the best of the meeting. He wished me success and the courage of my convictions. The distinguished jurist was extravagant in his praise, as I need not say, but, by the eternal gods, I heeded the admonition and kept my courage and kept my word.

The Auditorium meeting was but the climax or culmination of meetings I had addressed all over Denver. The entire voting public knew my views, and relying on my fidelity returned me to Congress by a largely increased vote. To have violated that solemn pledge, Mr. Speaker, as I regard the binding force of promises made by candidates for public office, would have constituted political treachery to the people who sent me to represent them on the greatest issue that ever confronted the world. Let those condemn who will. I am at peace with myself.

In the campaign of 1916, Mr. Speaker, I advocated the Democratic slogan as an abiding principle. Wherever my voice was raised—and I was not silent in that great political struggle—I interpreted the pregnant expression, "Has kept us out of the war," as an earnest of future steadfastness. I have no quarrel, nor have I had, with those clothed with constitutional authority to make decision who after the election voted contrary to my understanding of the covenant implied in the potent words of that campaign. But as an American Congressman, Mr. Speaker, acting constitutionally, dignified with responsibility, and having in mind nothing other than the welfare of the American people, regarded both as a free Nation and as free individuals, as I

honestly conceived such welfare and my duty in the premises, I voted against war and against conscription. That I voted at all on the questions is proof of my constitutional privilege and duty to vote, and I defy any responsible man or newspaper in Denver or elsewhere to question my sincerity or impugn my motives.

I was not in favor of sending American soldiers across the seas to wage battle, unless on the inspiration born of their own ideals they freely offered to go. Especially did I shrink from having part in ordering men to battle so far from home when I, not inherently more free, knew that I would not share the dangers. The people of Denver knew my convictions on this point, and so knowing, applauding, indeed, my every utterance on the subject, sent me to represent them and give voice to their heart-prompting prayers. As such Representative, Mr. Speaker, in a modest and constitutional manner, as all here would testify, I contributed my honest thoughts and voted as I believed. Perhaps in the circumstances I was unduly considerate of what I conceived to be the rights of other men, but from giving thought to the blood of men and the tears of women rather than to my own immediate political peace I have enjoyed renovation of soul and purification of heart that is more comforting than I can well describe.

My acts and votes were at all times in strict accord with applicable provisions of the Constitution, done in open Congress, with the world to witness. In every instance I acted on my own convictions and voted precisely as I promised the people who sent me to represent them in Congress that I would vote. Therefore, I emphasize, let no man seek to exalt himself by charging me with these things, for, not apologetically, nor yet boastfully, but in respectful modesty, I proclaim them every one.

Withered indeed must be the soul, and calloused altogether the heart of the man who indulges in serious criticism of the responsible official for pausing to give thought and honest expression to his views on questions so fraught with consequences. Mr. Speaker, such a critic may be an American, but I maintain that he is devoid of those qualities that go to make great Americans.

Because I kept my word, Mr. Speaker, and voted my convictions, the Democratic machine of Denver, always unfriendly to me, operating through the corporation "safety clutch" convention or assembly feature of the Colorado primary law, taking care, of course, to commit their larceny while I was at the Nation's Capital helping with the war program of the President and the Congress, prevented my name from going on the primary ballot.

There are two significant things in connection with this theft that I shall mention. One is that so far as they submitted themselves for nomination at the primary election the Democratic voters defeated those responsible for the outrage. Quite a few gentlemen who expected to carry the Democratic colors in the November sweepstakes, and rejoiced greatly at the "rebuke" the corporation hirelings administered to me in my absence, have now ceased to have personal interest in the fall campaign. The other point is that certain Denver lawyers, just comfortably above the first draft limit, but plenty young enough to have enlisted, leaders in the "gallant fight" against an absent man, did not know that even as they denounced me the Government was about to propose a new draft act that would make them liable for military service. One of the most lusty of these nonvolunteering patriots, typical, with variations, of the others, was a bachelor lawyer, with no excuse whatever for being out of the Army except his ultra conservative convictions about the safety of his own person. This dashing bachelor, while I suspect he would say I erred in voting to give deferred classification to boys of 18, has not written me in commendation of my vote to raise the draft age to 45.

Mr. Speaker, I was not unaware of the fact that I was to have opposition for the nomination. I did not suspect, however, that the machine would lash me to a post, then race their man around the track "empty" and claim the victory. I expected to have a place on the primary ballot and abide by the result. But such plan did not suit the profiteering outfit that was in control of the situation. They had tried that in the two preceding campaigns, and in those instances they, and not I, had to do the abiding. Of course, they "abided" with a grimace, but that did not matter particularly, for once my name was on the official ballot for the general election the people, regardless of party, had no trouble in making their choice for Representative in Congress.

I am sure, Mr. Speaker, that every Democrat in Congress would bear willing testimony to my party regularity, and that

every Republican as well respects such regularity. I do not purpose, therefore, to submit to the high-handed outrage perpetrated by a few home-staying and nonsacrificing gentlemen, simply because they call themselves Democrats. The primary showed that these self-appointed keepers of the Democratic conscience of Denver did not speak for the heart of the people. Their only successful nominee was for the office I now occupy, and he succeeded because these same men, decidedly more active in attempting to drive me out of Congress than in driving the Kaiser across the Rhine, "held" me till their man crossed the tape.

Mr. Speaker, I am a man as well as a Democrat. As a Democrat, honorable and regular, progressive and forward-looking, loyal and true, I was entitled to be a candidate for renomination to Congress. As a man I shall be a candidate for reelection to Congress.

When I learned the full purport of the scheme hatched by this unprincipled crew of political despoilers of the people, I announced that I would be an independent candidate for Congress this fall and issued a statement to the public, which was published in the press of Denver. In part I said:

That I have had two terms in Congress is due to the faith of the people in my integrity. The Democratic machine did not expect me to win the primary in 1914 and figured I would surely be defeated in the 1916 primary.

This year, at a time when I was 2,000 miles away and busy in the discharge of the duties of the office to which the people had called me, the machine by a trick prevented me from having opportunity to participate in the primary. The rank and file of Democrats expected that I would be the Democratic candidate for Congress this year, and the dealers knew I would be chosen at the primary unless prevented from having my name submitted to the Democratic voters.

But the people are not without their remedy. Some years ago, foreseeing just such a situation as is now presented in the Denver congressional district, the people, by initiated laws, provided for independent nominations and a headless ballot. The voter now votes for the man, not the party. My name will be on the ballot in November, the gang to the contrary notwithstanding.

And since what would have been true but for a trick in equity and good conscience is true in spite of the trick, so in this campaign, to all intents and purposes, although not so designated on the official ballot, I will be the Democratic candidate for Congress, just as in previous elections. Also, and this is more important still, as in other campaigns, so in this one, I will be a small "d" democrat. The selfish and corporate interests of Denver, uniting on one candidate, as they did in the last two elections, were unable to compass my defeat. This year they will have two "satisfactory" candidates. I ought to get more votes than both of them, and they know I will get more than either of their hand-picked favorites.

We are engaged in war, a war that is the greatest known to man. War is an awful thing—calamitous, withering, decimating, demoralizing. In doing my utmost to keep our country out of this one I went through a veritable Garden of Gethsemane. My severest political critics will concede that to spare our people from war's devastating blight, and with all the power of my being, I argued, voted, and invoked every remedy the Constitution of my country afforded. But when a country like ours, with its traditions, its historic pride, its virile people, its resources, slowly driven to anger, has, in a constitutional manner, put its hand to the plow of war there can be no looking back.

That God may strengthen and comfort us in our trials, and that through them all, as well as in the peace that will follow we may be mindful of Him, I venture humbly to pray.

At this point, Mr. Speaker, I should like to make brief reference to the other two candidates who seek a seat in Congress from the Denver district.

The manner in which the Democratic candidate was nominated I have mentioned. Now let us see who he is. We will pass over the fact that he is of the age and physical fitness which well qualifies him for military service. Nearly all other young men in Denver have gone or are going soon. Not so, this gentleman. He is an advocate, just now, of world democracy, but in the attainment he would let Denver's other sons have the glory of the fight.

The Denver Labor Bulletin, a conservative labor newspaper of very wide circulation, in the issue of September 14, 1918, says of this candidate that he "has not been a resident of Denver for three years, and his name does not even appear in the 1918 city directory. He is a professional corporation lobbyist in Washington."

The same paper, in its issue of September 21, 1918, again speaks of him as a man "whose name does not appear in the Denver city directory for 1918, but does appear in the city directory of Washington, D. C., where he has been employed as a professional lobbyist by the corporations for the past three years." It further says that he "will enter the campaign for the November election handicapped by being a non-resident of Denver and a suspicion that his primary designation as well as his previous designation in the county assembly were brought about through the use of money plentifully supplied by the corporations."

It is well known in Denver, Mr. Speaker, that the representatives of the Packing Trust and the big oil companies' combina-

tion gave him cordial and substantial support, and in Washington all Members of Congress who have deigned to notice him at all know what the man has been doing here. His mission was to induce the Government to favor certain oil magnates and companies in the matter of vast areas of immensely valuable oil lands, to which the United States Supreme Court held that the oil companies had no title. Mr. Speaker, the people of Denver will not commission this gentleman to ply his trade from the inside!

On the eve of the primary the Republican end of the organized big-business combination in Denver heartily indorsed the candidacy of the man who became the Republican nominee for Congress from the Denver district. In his first public utterance this gentleman endeavored to draw a distinction between "carping criticism" of the President and "speaking plainly," the former to be abjured, the latter to be indulged in the gentleman's discretion, when he should be a Congressman. That was to endear him to the high and mighty in Denver who intend doing their bit toward destroying the economic program of the President and recent Congresses. But what brought the local retainers of the Sugar Trust and the Steel Trust to their feet in spontaneous applause was the gentleman's assurance that when the war was over he favored putting the railroad corporations back into the hands of private owners. It does not matter to the gentleman, so it would appear, that the private owners of the railroads of the country have enjoyed exploitation of the people always, only to fail to render essential service to the people's Government in the first major emergency. When the emergency is over he would recommit a few Wall Street dealers to renew their exploitations. I am opposed to such restoration. The gentleman has tendered the issue and I gladly accept it. He can not possibly be more devoted to the few than I am to the many. We will let them all vote. By the declaration of the gentleman, he made his nomination certain in the millionaire primary conducted by the Republican Party in Denver this year, but by that same token he has made his election undesirable. Verily there is no profit in gaining a nomination from millionaires, only to lose the election from the people.

Mr. Speaker, this is the same gentleman who had the Republican nomination in 1916. That year he was a lieutenant, only recently enlisted, in the Colorado National Guard. He posted all over Denver his full-length picture in uniform, and had for his slogan the words "Not too proud to fight." The people were not beguiled by the Army uniform worn by the gentleman in that year of peace and are not likely to be enamored of the gentleman's civilian garb in this year of war.

When the election of that year was over, Mr. Speaker, the gentleman resigned from the Army, took off his uniform and returned to his law office. I do not charge that he was able to discern the near approach of the time when the boys he commanded would be in war, but everybody in Denver knows that the private soldiers he was privileged to command are now over there, and that he is not there to lead them against the enemy or to comfort them in their distresses.

The Democratic candidate, Mr. Speaker, is young and strong. He has refrained from joining the Army voluntarily, and has not failed to avail himself of the exemption feature of the law that required military service of his neighbors. The Republican candidate, equally strong and scarcely less young, already in the Army, resigned on the eve of hostilities.

I displease these gentlemen, so they say, when I voted against war, but I submit that by their works they can be better judged. They are for the war—none more loudly so—but they are not in the war, nor of the war. I hope I may not be misunderstood, Mr. Speaker, for, whatever the circumstances, I would never sit in judgment on my fellows, who, choosing for themselves, as these two gentlemen have, the measure of their service in an endeavor involving life itself. But aside from their corporation connections—enough to keep them out of the progressive Congresses of these days—the people of Denver, making every sacrifice that their blood and money will produce, can be trusted to analyze the purposes of these wholly militaristic but altogether nonmilitary gentlemen.

Mr. Speaker, it may not be unimportant to state that I am of English descent. My ancestors came to this country long before the Revolutionary War, and men of my name and blood fought with Washington. Later ancestors were in the armies of the Republic in all subsequent wars. My father was a volunteer private soldier in an Illinois regiment in the Civil War. Both of my sons, one of them only 18, tried to enlist in this war at the very beginning and were rejected. The older one then awaited his turn in the draft, when, because of his remarkable height, he was again rejected. Afterwards he was appointed

by Secretary Lansing to an important position in the Consular Service in Scotland, where he is now serving.

This present summer the younger boy offered for service a second time, and since July has been wearing the uniform of his country's Army.

Much space would be required to set forth the many acts passed by Congress the purpose of which was to prosecute the war. No man will attempt to say that I have not supported them all in genuine and whole-hearted spirit. On this particular point I cite the testimony of distinguished witnesses. In a telegram sent to a gentleman in Denver relative to my record, the Hon. CHAMP CLARK, Speaker of the House of Representatives, and the Hon. CLAUDE KITCHIN, floor leader, said:

It is true he voted against war and conscription. Such action was in accord with his convictions and, as we understand, public pledge made before his election. Nobody in Washington questions his sincere motives and patriotism, and all here admire his courageous qualities. In his position on the questions mentioned he was not without considerable company. No man in either House of Congress has given more loyal and industrious aid in the vigorous prosecution of the war and in supporting all war measures of the administration. It is unjust to question his loyalty. No Member of Congress questions it. He has the esteem and confidence of the entire membership of the House. In simple justice to him we venture this telegram to you.

Mr. Speaker, I hope I may be pardoned the thought that I have been a useful Member of Congress. I have had good committee assignments and have been helpful on matters in which the people are interested. As a member of the Committee on the District of Columbia I was privileged to have an important rôle in the successful fight for prohibition for the District and, of course, voted for the "dry" amendment to the Constitution. As the ranking member of the Committee on Education and acting chairman for a considerable period of time I materially aided in the vocational-educational legislation designed for the benefit of returning wounded soldiers. Of those favoring equal suffrage I rank next to the chairman of the Committee on Woman Suffrage, and on my motion the suffrage amendment to the Constitution was favorably reported to the House of Representatives, and was passed. I was chairman of the committee which held hearings on the minimum wage bill for the District of Columbia, filed the favorable report thereon, and had charge of the measure on the floor of the House. I voted to raise the pay of private soldiers from \$15 to \$30 when votes were more needed on the subject than people would now believe to have been possible. I have been as genuine a friend to labor as any Member of Congress, as the Record amply discloses.

I have wanted to tax the rich more and the poor less than the revenue measures, for which I voted, have provided, and I confess to disappointment in that regard. I have marveled at the celerity with which the status of the man power of the country can be fixed by statute, as contrasted with the prolonged hearings and arguments indulged when considering measures to raise revenue with which to pay the cost of the activity into which men are drafted. The only unheard people are the masses, and they alone are the ones who are unselfishly loyal and genuine. The man with millions of income, and corporations, opulent in peace times, surfeited with war-time profits, enjoy the defense of the press and the specious pleas of the greatest advocates their swollen fortunes can employ, as they contend simply over the percentage they should be required to devote to their country in its distress, not their all, as is so often the case with the less fortunate. I hope, Mr. Speaker, and in worldly matters it is my fondest wish, that in my vision of justice the common and humble man has place, and that in my public service, to the full extent of my light, the plea of the unheard man is given expression.

There is a self-constituted league in New York City, which is inspired, financially kept, and controlled by Wall Street interests. The gentlemen of this league presume to say that on six items, all of which occurred before this country went to war, I voted contrary to their views. Very likely I did. And when I am returned to Congress I will vote against them some more. I do not represent them in Congress.

Mr. Speaker, the people of Denver and I had a very specific and definite understanding as to what my attitude would be, as I have clearly shown. Many good Members of Congress entertained views quite opposite to mine, and a smaller number, individually as good, cast their votes as I cast mine. That I varied not one hair's breadth from the letter and spirit of my compact with the people, my severest critic would concede. Whoever, therefore, has been right, and in this world of error no honest man is wrong, I have not been inconsistent; and whoever has been false, and no honest man is open to that charge, I have not been guilty of falsification. The people shall say.

War Profits.

EXTENSION OF REMARKS

OF

HON. IRA G. HERSEY,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 4, 1918.

Mr. HERSEY. Mr. Speaker, in 1912, by reason of a divided Republican Party, the Democratic Party elected their President and a majority of both Houses of Congress. For the first time in the history of the Democratic Party it had full control of legislation, and during the first four years of the Wilson administration that party changed in many particulars the laws and policies of the Nation and enacted into law its policy of free trade.

This Nation had the experience of eight months under the so-called Underwood free-trade tariff, and it will always remain a dark page in the history of the Republic. Financial and industrial disaster threatened all the industries of the country. The farm, the factory, the place of business, and labor everywhere were alarmed and paralyzed by the results of free trade and by the removal of that protection which had made this Nation the most prosperous in the world.

In the presidential election of 1916 the Democratic Party faced what seemed to be the absolute certainty of defeat, but a great world war came and temporarily saved the Democratic Party. The demands from Europe for food and war materials gave employment to labor and revived the dying industries of the Nation. The manufacture of war goods for Europe, the furnishing of food and clothing to the warring nations, all brought great revenues and profits to our people. The United States stood in the market place selling its goods and wares to whoever would buy, receiving great wealth from the misfortunes and necessities of war.

The European war also brought great political profits to the Democratic Party. It stopped the importation of pauper-made goods. It shut our gates against the pauper labor of Europe. For the time being it was high protection to this Nation and operated as a high tariff, except that we lost the revenue.

This of itself could not save the Democratic Party from defeat in the Presidential election of 1916. A deliberate attempt had been made by Germany to involve us in war with that nation so that it might thereby prevent us from further supplying food and munitions of war to the enemies of Germany. Our people did not seek war. They were opposed to war except as a last resort. They were willing to sacrifice everything but liberty and honor to avoid war; and taking advantage of this spirit of a peace-loving people the Democratic politicians sought to make political capital out of the war. They claimed everywhere that the election of Charles E. Hughes and a Republican Congress would precipitate war and that the reelection of President Wilson and a Democratic Congress would mean peace, and they flooded the whole Nation with the campaign cry, "Vote for Wilson, who has kept us out of war."

While the war in Europe saved the Nation from many of the terrible results of free trade it also succeeded in saving the Democrats from defeat in the presidential election of 1916. Then there came a time, however, when the President could no longer resist the patriotic spirit of the American people; there was a quick assembling of the Congress and a prompt declaration of war against Germany.

On the part of this Nation it was not a Democratic war, not the President's war, not the war of any political party, but a war to be waged by all the people of the United States to vindicate national honor, to establish and defend liberty and freedom in all the world. It would seem that in such an hour, when a united people had pledged their lives, their fortunes, and their sacred honor to the fulfillment of these great aims, that politics ought to have been forgotten and all political parties should have acted as a unit in the efficient preparation and the vigorous prosecution of the war.

It is greatly to be regretted that the President of the United States and his political advisers found it necessary to attempt to make this war his war and that of his political party. It was very early apparent that the only part that the Republican Party should have in legislation and in the conduct of the war was that of a subservient and cowardly consent to all plans, purposes, policies, and legislation of the administration. If the minority ventured to suggest, advise, or criticize they were met

with the claim that they were obstructionists of the administration and were attempting to defeat the winning of the war.

This idea was very early impressed upon the minority when ex-President Roosevelt and Gen. Leonard Wood, heroes of the Spanish War, tendered their services to the President with the humble request that they might organize at once an army of 400,000 cowboys and roughriders of the West, men not within the draft age, but who would at once go to France and carry the Stars and Stripes along with our allies, but the President and his followers gave them to understand that this was not to be a Republican war, but that the Democratic President and his party intended to surround themselves by their own party advisers and that all their policies should be those of the Democratic Party.

The Republicans in Congress even after this rebuff made many an ineffectual attempt to secure a war cabinet, to obtain a nonpartisan committee of both Houses to investigate and to approve all war expenditures and to bring together, condense, and coordinate the multitude of war departments and bureaus into one active and efficient force for the vigorous prosecution of the war; but all these attempts met with a stern rebuke on the part of the President and his party on the ground that the responsibility for legislation and the war was upon the Democrats and not the Republicans; that the Democratic Party should have a free hand and should carry out its own plans and policies without regard to any suggestions or advice from the minority.

Then there came a year of delay. The first year after our declaration of war will always remain a dark page in the history of American achievements. Delays caused in part by theories on the part of the President and his political advisers that he could end the war by diplomacy, by the writing of messages, by a scholarly presentation to the warring nations of the peace aims of the United States, by the loaning of money to our allies, by the neglect to declare war against all our enemies—delays in the main caused by inefficiency of the party in power, by exhausting our energies in the enlargement of the departments in Washington, by the creation of new commissions and bureaus, by the inducting into office of those who looked upon the war as an opportunity to obtain political profits, by the making of war-profit contracts that involved endless waste and extravagance, and by attempting through Executive power and influence to make political profits out of the war.

The Republicans in Congress while giving to every war measure their warm support early demanded a declaration of war against all our enemies, a change in the management and personnel of the departments, a coordination of war work, a larger army, an investigation of delays, and a vigorous and relentless prosecution of the war to a final conclusion, and that at once. The President was finally forced by the minority to abandon his ideas of "peace without victory," to break away from his pacifist advisers, and to declare for "force, force, force!" and "unconditional surrender."

By reason of Republican constructive criticism the administration has finally coordinated many departments, removed certain war boards from Washington to Philadelphia, placed the work of constructing airplanes and the making and manufacture of war materials in the hands of men of the North, like Schwab and others, called to Washington into the Department of Labor ex-President Taft, and called to investigate the aircraft scandal Judge Hughes, and to make a general shake-up everywhere in the inefficiency in the administration and the laggard conduct of the war, so that during the last six months we have accomplished more in the successful prosecution of the war and in the making of it a success on the part of the United States than we had in the whole first year after the declaration of war.

To assure the country that the Democratic Party was not capitalizing and using the war for political profits, the President, in his message to the Congress of May 27 last, said:

Politics is adjourned. The elections will go to those who think least of it; to those who go to the constituencies without explanations or excuses, with a plain record of duty faithfully and disinterestedly performed. I, for one, am always confident that the people of this country will give a just verdict upon the service of the men who act for them when the facts are such that no man can disguise or conceal them. There is no danger of deceit now. An intense and pitiless light beats upon every man and every action in this tragic plot of war that is now upon the stage.

These grand nonpartisan and patriotic sentiments of the President were received by the people with some doubts and misgivings. They remembered that only a short time before this message there had been held a special election in New Hampshire to fill a vacancy in the House of Representatives, that in that election the personal representative of the President carried to the Democratic candidate the indorsement of the Executive and claimed from every public platform that a vote for the Republican candidate, Mr. BURROUGHS, who now occupies a seat

in this House, would be a vote for the Kaiser and would give joy to Germany, but a vote for the Democratic candidate would be a vote against Germany and would help win the war.

Neither had the people forgotten that there had been a recent special election in Indiana to fill a vacancy in the House and that the Democratic candidate in the past had opposed in Congress the President, but that in spite of this fact the President sent a warm letter of indorsement to Mr. Gray and asked for the defeat of the Republican candidate, Mr. ELLIOTT, who now occupies a seat in this House on the Republican side—and all this on the ground that it was necessary to elect Democratic Congressmen to win the war.

A few days after this proclamation of the President that "politics is adjourned" a special election was held in the State of Wisconsin to elect a United States Senator, and Representative IRVING L. LENROO, of that State, then a Republican leader in this House, who had earnestly, faithfully, and loyally supported all war measures in Congress, and whose patriotism, loyalty, and ability were unquestioned, was a candidate for Senator at that election. The President made a personal selection of the candidate to contest the election with Mr. LENROO. He sent the Vice President to that State with a message that Davies, the Democratic candidate, had been chosen by the President to be a candidate, and that it was necessary to elect a Democrat for the proper success and conduct of the war; and the President's followers in Wisconsin, following his lead to show that politics had been adjourned, set up the campaign cry that a vote for LENROO, the Republican, would give joy to Berlin, and that a vote for Davies, the Democrat, the President's choice, would bring gloom to Berlin. The people of Wisconsin justly rebuked this attempt on the part of the President to dictate to them who they should nominate and elect to Congress. The only real excuse ever given for this strange conduct on the part of the Executive was that he wanted a Congress made up of those who would be subservient to him and vote as he requested on every future measure, and who would refrain from any criticism of his administration and not seek to change or amend any legislation demanded by the executive department.

Instead of politics being adjourned, the fight then became fast and furious. Into every primary went a letter from the President or a message from his personal representative informing the people that the President demanded the nomination and election of certain candidates for Congress and the defeat of certain other candidates, on the ground that he wanted a Congress that would support him in all his future policies, and that it was absolutely necessary for the successful conduct of the war that he should have a Congress of his own selection—men that should come and go at his beck and nod.

On the 23d day of April last the gentleman from Alabama [Mr. HEVLIN], who has always claimed that he is a special representative of the policies of the President and that the reason he is not in uniform and in the service "over there in France" is that the President has requested that he should remain in Congress, as he could do more good there, made the following remarks, which appear on page 5507 of the CONGRESSIONAL RECORD of that date:

It has long been the boast of the German Government that in every war she has waged she has had men in positions of trust in the enemy's country where they could serve her most effectively. In this country she has sought to place them in the War and Navy Departments and in Congress, so as to keep in touch with the war program and to have bills introduced and speeches made that will embarrass this Government and furnish German propaganda to the spy system, to be published and franked over the country at the expense of the United States Government. Since Germany made war upon the United States things have been done and said in both branches of the American Congress that have given aid and comfort to the enemy. Things have been done and said by Members of Congress that have greatly embarrassed the President and seriously hindered the Government in the mighty work of war preparations, and these things have injured our country and helped the enemy.

And on the 5th day of July last this same gentleman, on the floor of the House, said:

Gentlemen, the election is fast approaching. Gentlemen on both sides of this House who are constantly getting up here and belittling the efforts of the administration in the handling of these great war measures ought to be defeated at the polls, and I hope that they will be defeated.

I came to the Sixty-fifth Congress at the special session and have been present during all the work of this Congress. I have been faithful in my attendance in this House. I have been present during the debates on all public measures. I have witnessed the progress of all war legislation at the Capitol. I have attempted to become acquainted with and to obtain the measure of the other 434 Members of the House. From my experience and observation I wish to say that I do not believe there has been in this Congress a disloyal, unfaithful, or unpatriotic Member. In the debates, in the casting of votes, in the progress of legislation through the House I have never observed at any

time any act on the part of any Member of either party that gave even a hint that that Member was unpatriotic or disloyal or that he was attempting in any way to hinder or obstruct the President or the administration in the successful conduct of the war. To be sure there are Members on both sides who voted against a declaration of war. I believe they all did so honestly, with the same love of country, with the same patriotism, of every other Member. There are Members on both sides who voted against conscription and the draft, believing, I have no doubt honestly, that a sufficient army could be raised by enlistment and volunteering, and I can not for one moment believe that this handful of men who voted against war and against the draft were any less patriotic or any more disloyal than those Members who supported both these measures.

In the progress of legislation in the Congress there has of necessity been some criticism by both Democrats and Republicans—criticism at times of the administration, criticism of many of the war preparations and delays, criticism of the many extravagances; but I believe all this criticism has been of the constructive kind, made with no other intention or purpose than to make efficiency in the War Department and to give us better legislation, to spur those who had the authority to a more vigorous prosecution of the war, and all done at all times with a love of country and a pure patriotism; and I further believe that the Republican Party in the Sixty-fifth Congress has been no less patriotic than the Democratic Party; that the President has received at the hands of the Republicans as warm and hearty support for all just war measures and efficient laws as he has had at the hands of his own party; and that from the combined efforts on both sides the President has received unstinted and ungrudging support in all measures that ought to have been enacted.

I have never discovered on the part of the Republican Party in this Congress, or on the part of any Member, any attempt at any time to hinder or obstruct any measure in this House. I have never witnessed a filibuster. There has never been any concerted action on the part of the Republican Party or any of its Members to hold up or delay any legislation in this House.

No President and no ruler in the history of this world has ever received from Parliament or Congress such unstinted support as has been given by this Congress to President Wilson. No monarch in all history has had bestowed upon him such absolute and unlimited powers as this Congress has conferred upon the President of the United States, and it is not just nor fair politics for the President or any of his political followers at this time to turn about and say that he, the President, has the right and ought to exercise his influence, authority, and power in dictating and demanding the nomination and election of certain candidates so that he may have a Congress subservient to his will, to say that men elected by the people, with an oath to support the Constitution and play the part of statesmen, shall forget who they represent and abjure their responsibility and prerogatives and become mere automatons to be worked by a wire from the White House so that the next Congress, instead of being the great lawmaking body of the world, shall become a mere Punch and Judy show.

The President and Democratic politicians may in all this be sincere and imbued with patriotic motives; they may believe that to win the war it is necessary to have a Democratic Congress. One thing is certain, however, that all the acts of the President, all his interference in the selection of Members of Congress, in the late primaries and since, show that he intends to obtain if possible in the November elections Congressmen servile and subservient to his will, those who in the consideration of future legislation, the conduct of the war, and in the settlement of the questions that will arise after the war will consent to be but the mere instruments of Executive authority, subject to the imperial will of the administration.

To secure and obtain a Congress that under the circumstances will not dare to criticize any legislation that comes ready-made from the White House, the President makes war even upon the Members of Congress in his own party and aims to destroy all those he can not coerce or intimidate. He says to the gentleman from Texas [Mr. SLAYDEN], "You can not be a candidate in the primaries," and after a long and useful service in the House of 22 years, a service that has always received the approval of his people, the gentleman from Texas obeys the command of his master and does not enter the primaries, and the President selects to succeed him the brother-in-law of Postmaster General Burleson. He says to another Representative from Texas [Mr. McLEMORE], "You dared in times of peace to follow me and offer a resolution which you believed would keep us out of war, therefore you can not come back," and the influence of the Executive defeats him in the primaries. He says that Senator VARDAMAN shall not be renominated and reelected because he at times

criticized some of the bills of the administration, and his political followers obey the President and leave the Senator home.

He selects the new Senator in Georgia and says that Senator HARDWICK must not be renominated or elected because he has at times voted for amendments to administration measures in the Senate. He tells Congressman LEVER he must not run for the Senate. He sends a letter to Alabama saying that Representative HUDDLESTON must not come back because he, too, has seen fit to vote for amendments to certain bills of the administration, and has dared to criticize delays in the War Department and has not always been subservient to the Executive will. He speaks and the gentlemen from Ohio [Mr. GORDON and Mr. CROSSER] are defeated in the primaries because they dared to express an opinion on public questions at variance with Executive theory and decree.

He selects the candidates for United States Senate in Kentucky, Illinois, Wyoming, New Jersey, and many other States, and so it goes on until the Members of Congress of his own party stand aghast, trembling, and anxious to know their fate—anxious to know whether the President is for or against them or who he intends to select in his selection and make-up of the next Congress.

And this is all done by the senseless and unfounded claim on the part of the Executive and Democratic politicians that these men whom he seeks to defeat have been obstructionists and have hindered him in the proper conduct of and the successful winning of the war.

Nor is this all. The Executive, to show that "politics is adjourned," forces his way into the Republican Party organization and presumes to dictate to Republicans whom they shall nominate and whom the people shall elect in November. The President goes to the great State of Michigan, that has 100,000 Republican majority, and attempts to control its primary election. He calls to the White House a Republican who voted the Democratic ticket in 1916, a pacifist who insults the flag at every opportunity and who in every way is unfitted for the great office of United States Senator, and obtains his consent, if elected, to vote with the President on all measures without a murmur—to be the servant, slave, and tool of the Executive. Henry Ford is induced by the Executive to place his name upon both the Republican and Democratic ballots in the primaries, with the evident intention that if he is nominated by both parties he would resign the Republican nomination and thus deprive that party of a candidate and assure the election of the President's hand-picked candidate.

The people of New Hampshire rebuked the interference of the President; the voters of Indiana repudiated Executive selection; Wisconsin refused to surrender its sovereign choice; Michigan discarded Henry Ford; the people of Alabama resented the attack of the President upon Representative HUDDLESTON, and everywhere true Americans will continue to assert their right to select and judge the fitness of Members of Congress.

The Chicago Tribune says that "disagreement, in large or small part, with the policies of the administration become disloyalty to the Nation," and this is the result of this attempt to obtain political profits from the misfortunes of war.

That great Democratic paper, the New York World, calls this attempt of the administration to capitalize the war and use it to obtain political profits as one of the "gravest perils" that confront our people.

The New York Evening Post of a recent date, in speaking of this nonpartisan work of the President, says:

We have never before in this country seen a President openly assume the right to say who should and who should not be elected to Congress. Mr. Wilson seems to desire to set up in Congress a body analogous to those members of Parliament, in the time of George III, who were known as "the King's friends." It is not simply punishment for the past that the President appears to have in mind. He would erect a kind of moral terrorism for the future. This latest evidence of President Wilson's masterful ways will appear disquieting and dangerous to sober-minded Americans.

In a few days we hope to have a recess of Congress until after the November elections. Members of the House will be going home to make nonpartisan patriotic speeches in favor of the fourth liberty loan, and after that to enter into the canvass for their reelection on November 5. In this political canvass the Republican Party is to meet this same attempt to use the war for political profits. The President has demanded a Congress of his own selection. He has nominated his candidates, and he is now calling upon his party followers to see to it that no others shall be chosen and elected by the people.

The contest is to be unlike any ever waged in the political history of the country. The issues are not the personal fitness of candidates or the policies set forth in party platforms. There is to be only one issue on the part of the Democratic Party and

that is to prove that a vote for the Republican candidate is a vote for Kaiser Bill. There is to be only one war cry, and that is, "The only way to win the war is to vote for the 'rubber-stamp' Democrat that has been selected by the President."

The congressional campaign on the part of the Democratic Party has been placed in the hands of the Democratic national congressional committee, of which the gentleman from Oklahoma [Mr. FERRIS] is chairman. He has issued a campaign textbook with the war cry, "Help Wilson win the war." He has also mailed to all his political henchmen and committeemen throughout the Nation in every congressional district a form letter from the Democratic headquarters at Washington, signed by him as chairman, in which he calls upon the Democratic Party workers in each congressional district to immediately organize Democratic clubs and to name these clubs "Patriotic win-the-war clubs." They are to hold public "mass" political meetings, addressed by "speakers of county, State, and national prominence," and to set forth to the people that "the public interests of our country demand that we elect a Congress in full sympathy with the President," and that by doing this they would perform a "patriotic work."

The Democratic national congressional committee has flooded every congressional district with a pamphlet headed, "Why you should give earnest attention right now to electing a Democratic Congress." I have only time to quote from this circular the following attempt to make political profits out of the war:

The election of a Republican Congress in November would be viewed as a defeat for President Wilson by our allies, and particularly by our enemies. It would be viewed in Germany as a proof of their unwarranted claim that our country is not behind our war President. It would be a source of comfort and elation to the Kaiser and his cohorts.

The Democratic State convention of Illinois, September 27, said in its platform:

A Republican victory would be regarded by our allies as a repudiation of the President and what the President stands for.

The lines are drawn. The battle is on. The Democratic Party in this Nation refuses to make its political contests in the usual way. Candidates are not to be selected upon their merits. The Democratic Party is not to stand upon its record in the past or upon its policies for the future. It seeks only one thing, political profits by reason of the war, and without any patriotic reason whatever it seeks to capitalize the war and blind the people by false claims, to wit: That a Democratic Congress would be loyal and that a Republican Congress would be disloyal, and that the war can only be won by electing Democrats to Congress, and only then by the choice of those candidates who are approved by the President and who would, if elected, be subservient to his will. The Washington Post in an editorial, September 23, said:

Having met the loyalty test, candidates may properly differ on a great variety of subjects. But the man who asks election upon the ground that his party is more loyal as an organization than any other makes a futile appeal, which reflects upon the intelligence of the public. It is a matter of record that the strongest opposition which the President's war measures have met in Congress has come from the Democratic Party. More leaders and men of influence of the Democratic faith in both branches have fought the administration bills than have Republicans. And yet that gives no ground for the statement that the Democratic Party is less loyal to the President than the Republicans, for it is a well-established fact that the great majority of both parties in Congress are entirely loyal.

Instead of indulging in a debate as to their relative degrees of loyalty political leaders now would do well to base their claims to support upon their ability to grapple successfully with the momentous questions which are certain to come at the end of the war. Then will constructive statesmanship be at a premium. Perhaps the most important problem from a political standpoint will be the maintenance of the high wage standards set during the war. Wages now are abnormally high, and so are prices. With the return of 4,000,000 or 5,000,000 men now in the military service the depleted labor market will be relieved, and the tendency of wages and prices will be downward. How can this be checked, or at least made gradual? How can the necessary readjustment of industrial and commercial conditions be effected without panic or suffering? The political party which can solve this problem in a practical way will win the confidence and votes of the millions of workers who are directly and vitally affected.

And there will be other puzzles to work out—internal taxation, the financing of the national debt with the minimum burden upon the people, delicate questions of international relations to adjust, and scores of others. Constructive statesmanship, indeed, will be in demand in America. Let the political leaders abandon the squabble over their comparative virtues and devote their attention to these matters.

Up to the present moment the Republicans in Congress have stood solidly behind all war measures. There has been no obstruction, no filibustering, only patriotic action on the part of the minority. They have given better support to the President and a more vigorous prosecution of the war than has the majority, and with what reason does the Democratic Party now say that the Republican Party in the future will not do everything in its power for the success of the war?

It is certainly true that in the War of Sixty-one, the war for the Union, President Lincoln was solidly opposed by the Democratic Party on every war measure. They were obstruct-

tionists. They filibustered in Congress on every measure, and in the War with Spain only six Democrats supported the war policies of President McKinley, and because the Democratic Party did these things when they were in the minority is that the reason they now claim that the Republican Party will imitate these political obstructionists when they have an opportunity?

We already have had the opportunity, but have not embraced it. What right have the Democrats to say that we will do in the future what we have not done in the past? How can the election of a Republican Congress hinder or obstruct the progress and success of the war? Will the Republicans, if they obtain possession of the Congress, refuse to finance the war? Will they refuse to support our armies? Will they refuse to give the necessary vigor to a successful prosecution of the war? Will they meet in national convention and vote the war a failure, as the Democrats did in 1863? Will they vote to repudiate the great war debt now piling up in this Nation? Will they attempt to repudiate the promises of the Nation, as the Democrats did after the Civil War? Will they refuse to give pensions and care for the soldiers and sailors of this war? Will they attempt to debase the currency of this Nation and vote for free silver at the ratio of 16 to 1? Will they attempt to raise the necessary revenue to pay the great war debt by resorting to free trade? If so, then the Republican Party in the coming congressional election ought to be defeated.

If, on the other hand, the election of a Republican Congress in November means a more vigorous prosecution of the war, if it means the appointment of a nonpartisan committee on war expenditures, if it means an investigation of Government contracts, if it means a proper expenditure of the revenues of the Nation and the end of extravagance, if it means at the close of the war that the great business and industries of the country shall be built up under proper industrial laws and the protection of American markets and American labor, if it means that the credit of the Nation shall be preserved and the great war debt paid, as it was paid by the Republican Party in the past, then a Republican Congress should be elected on the 5th of November.

This is not a question of loyalty. Both parties are loyal. It is not a question of the support of the President on all proper war measures. Both parties have supported him faithfully. It is a question of efficiency in the conduct of the Government in times of peace as well as in times of war. The National Republican in a recent issue set forth the policy of the Republican Party as follows:

In the matter of volunteers in the service, contributions to war enterprises, taxes and other means of supporting the war the Republicans of the country have at least kept up with their Democratic fellow citizens. Certainly membership in the Republican Party was not made grounds for exemption in the conscription act or of relief from taxation in the revenue acts. No Republican convention, from precinct caucus up, followed the example set in Democratic county, State, and National conventions throughout the Union States in 1864 by pronouncing the war a failure and demanding a cessation of hostilities. The Republican States of the country have led in the matter of support of the war, and the solid Democratic States of the country have trailed at the rear of the patriotic procession in the matter of volunteer enlistments, liberty-bond purchases, and Red Cross support. This is a matter of record. In Congress Republicans have given better support to the war than have Democrats. All four of the Members of Congress who have enlisted for service in the Army are Republicans. Yet Republicans are subject to the humiliation of having the war treated as a party asset by Democratic politicians and witness an effort to put the stigma of disloyalty upon all those who do not give three cheers for every Democratic officeholder and candidate for office in the country.

The war is not a partisan enterprise. No thoroughly and intelligently loyal citizen of this country will pretend that it is or try to coin the blood of American soldiers into votes for any partisan organization. The party in power should have been patriotic enough to recognize the manner in which Republicans have come to the front in support of the war. It was only their duty, but no more their duty than it was that of the Democratic Party in the sixties to desist from pronouncing the war a failure and demanding its cessation, or in the nineties to vote for the law providing the money with which to carry on the war which Democrats in Congress, with less than a dozen exceptions, failed to do. The party in power should have been broad enough, wise enough, and patriotic enough to let Republicans in on the responsibilities of the war as generally as they have participated in its duties and sacrifices.

Republicans will go on giving whole-hearted support to the war as a national enterprise. They refuse to admit the partisan claim that the war is the property or the campaign asset of any partisan organization. They resent the effort made to impugn their patriotism merely because they do not think that loyalty to the boys at the front requires unquestioning support at the polls for every politician at the rear who tries to put himself in the hero class because he is running for office on the ticket of the party which happens to be in power at this time. Let us have less talk from stay-at-home Democratic politicians to the effect that this is "our" war and that "we" are winning it. There is no "we" to it. "They" are winning it, and "they" means the boys over there where the fighting, not the talking, is going on, and where men are making sacrifices, not seeking public jobs in the name of patriotism.

The Republican Party in this Nation in the coming congressional election stands firmly upon its platform of principles and offers to the Nation candidates of unquestioned loyalty, of the best ability, who will do everything under their constitutional

rights to win the war and bring peace and prosperity to every part of the Republic. We shall not pause for one moment to use the war to obtain political profits, but everywhere we shall listen to the words of our great leader, who still lives, Abraham Lincoln, the immortal Republican, when he said:

With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations, * * * that a Government of the people, by the people, for the people, shall not perish from the earth.

War and Patriotism.

EXTENSION OF REMARKS

OF

HON. JOHN M. EVANS,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 3, 1918.

Mr. EVANS. Mr. Speaker, we are living in the most critical time in the history of the world. There never was a time since the foundation of this Government when unity of action was as necessary on the part of the American people as to-day. Our armies are to-day facing on the bloody fields of Europe the most desperate, tyrannical, brutal, and barbarous foe that ever appeared to curse the earth. All that America, yea, all that the world holds dear, is at stake. The liberty of mankind is in the balance, and the world is looking to America and to Woodrow Wilson, President of the United States, to lead its people from this fragile situation once more into times of peace.

Woodrow Wilson is carrying upon his shoulders the most colossal burden that ever weighted down a public man, and all the world is dependent upon his success to carry that burden. He, as the Commander in Chief of the Army and Navy, largely holds the destiny of this country in his hand. Let us look for a moment to see what has been accomplished under him:

On April 6, 1917, the date on which war was declared, our Army consisted in round numbers of 195,000 officers and men. On October 1, 1918, that Army had grown until it consisted of more than 3,100,000 officers and men, well trained and fully equipped, and more than 1,800,000 officers and men transported to the fighting line in France over 3,000 miles of ocean filled with mines and lurking submarines.

When war was declared we had 7 field and base hospitals. We now have 388. We had 2,356 officers and men in the Corps of Engineers. We now have 265,000 in that department, and more than 200,000 of them in France are reconstructing war-wrecked industrial plants, building highways and railroads over which troops and supplies may be transported; building bridges, and warehouses, and telephone and telegraph lines to aid the communication for our victorious armies.

When we entered the war our Navy had in all of its various branches an aggregate of 87,530 officers and men; it now has in it more than 590,000 officers and men. We had but 304 ships afloat; we now have 1,800, and under the direction of our efficient Secretary of the Navy others are being built faster than they can be counted, to the supreme satisfaction of our allies and the utter consternation of our foes. Assisted by the British Navy we have safely convoyed more than 1,500 troop and supply ships across the ocean.

On the day we entered the war our air service had 1,175 officers and men; there are more than 143,000 in it now. We then had 3 aviation fields; we now have 28. We had 210 training planes then; we have more than 6,800 now.

The foregoing naked figures and facts concisely express the magnitude of the marvelous military program we have carried out during the first 17 months we have been at war.

The mere raising of our vast Army, figuratively speaking, in the twinkling of an eye, although an accomplishment without a parallel in history, is, nevertheless, but a part of our titanic performance; it is but a single act of a very long and complicated drama.

Everyone of the millions in our new Army and everyone of the hundreds of thousands in our new Navy had to be clothed and sheltered and fed. Everyone of them had to be furnished equipment, including everything from the shoes on his feet to the hat or the helmet on his head; including everything from the rude tin cup from which he drinks his coffee to the rifle with which he shoots his foe; everything from the razor with which he shaves his face to the bayonet with which he slays the vicious Hun.

All these things in hitherto undreamed of quantities had to be provided by our Government for the comfort, safety, and effectiveness of our boys as they emerged from the pursuits of peace proudly to take their places in the serried ranks of war.

There were next presented for solution the difficult problems of transportation; of the mobilization of industries; of the speeding up of production; and of the redistribution of labor, so as to repair, as far as possible, the losses in man power which the mines, the factories, the farms, the foundries, the railroads, and all the other necessary industries of the country had suffered through the operation of the selective draft. All of these problems, with their innumerable perplexities, as well as all the unnumbered other problems directly or indirectly related to them, have been so unerringly solved by Woodrow Wilson and his assistants in the Congress and the Cabinet as to amaze mankind and make this the foremost nation of all the world.

With the first call to the colors of the men and boys of this country the President and the Congress appreciated the necessity of making provision for those men and for their families, and so we proceeded to increase the pay of the enlisted men of both Army and Navy about 100 per cent; we provided a reasonable compensation for the families of these men in case of death or disability; we passed a war-risk insurance act under which has been written \$30,000,000,000 worth of insurance. In short, as a result of this liberality the American soldier is to-day the best paid, the best fed, the best clothed, the best sheltered, and the best protected soldier in the world, while his dependent ones have been provided for with a degree of liberality that establishes an unparalleled record for any government in the world.

The brief time allotted me, Mr. Speaker, will not permit me to go into further detail upon this particular subject, though the foregoing imperfectly indicates some of the momentous things the President and his administration have accomplished since the declaration of war 18 months ago.

Mr. Speaker, it is a source of gratification that no politics have crept into the conduct of our military affairs. I am quite sure the American people applaud that sentiment.

On all war measures, and all matters pertaining to the war, it would have been impossible to determine from the vote of any individual in this House as to what political party he belonged.

There has, however, Mr. Speaker, during the past two or three weeks crept into the Record a rather discordant note. The approaching election has warped the judgment of some of our friends of the minority and they have indicated to the country that it would be better for the success of the country and the progress of the war if a Republican House should during the next two years supersede the present Democratic House. It seems peculiarly unfortunate to me, Mr. Speaker, that this issue should be raised at this time. This is no time for internal strife and political dissension.

Mistakes unquestionably have been made. It is scarcely conceivable that this tremendous program could have been achieved without mistakes, and many of them. It would have been utterly impossible for this or any other nation to have reached its present progress in such a war program without errors. But these errors should not be made the subject of carping criticism, and these criticisms at such a time as this are unworthy of men holding high positions at either end of the Capitol. How different were the words of Thomas Jefferson when the life of this Nation was at stake. In a letter written to George Washington, he said:

How unfortunate and how much it is to be regretted that while we are encompassed on all sides with avowed enemies and insidious friends, internal dissensions should be harrowing and tearing our vitals. The last, to me, is the most serious, the most alarming and the most afflictive of the two; and without more charity for the opinions and acts of one another in governmental matters or some more infallible criterion by which the truth of speculative opinions, before they have undergone the test of experience, are to be forejudged than has yet fallen to the lot of infallibility, I believe it will be difficult if not impracticable to manage the reins of Government or to keep parts of it together; for if instead of laying our shoulders to the machine after measures are decided on, one pulls in his way and another that, before the utility of the thing is fairly tried it must inevitably be torn asunder; and in my opinion the fairest prospect of happiness and prosperity that was ever presented to man will be lost perhaps forever.

My earnest wish and fondest hope, therefore, is that instead of wounding suspicions and irritating charges there may be liberal allowance, mutual forbearances, and tempering yieldings on all sides. Under the exercise of these matters will go on smoothly and, if possible, more prosperously. Without them everything must rub; the wheels of the government will clog; our enemies will triumph and by throwing their weight into the disaffected scale, may accomplish the ruin of the goodly fabric we have been weaving.

Again, Mr. Speaker, within the week we have heard upon this floor the invidious comparison made as to the number of men who have entered the Army from this side of the House or from that. This comparison was made for the purpose and with the intention of persuading the people of the country that the majority in this House are less patriotic than the minority. The

comparison showed that four men from the Republican side of the House had entered the Army and donned the uniform of their country, and that only one Member from the majority side had pursued that course.

I think such a comparison is unfair and unworthy of its author. I would not detract one iota from the credit that is due any man on this side of the House or on that who leaves his seat to enter the Army.

No one, I am sure, would detract from the glory of the gallant Augustus P. Gardner, whose memory we cherish and revere; we are proud of him and the patriotism that led him to make the extreme sacrifice for his country; a brave and gallant soldier; a wise, farsighted, constructive statesman. What would we not have given during the past 18 months for the benefit of his daily help and counsel in this body? Peace to his ashes, and may his spirit hover over the Capitol and guide us in the solution of the great war problems that yet must be met by this House. I pay homage to the zeal and patriotism of LA-GUARDIA, of JOHNSON of South Dakota, JOHNSON of Washington, CONNALLY of Texas, and others who have left this body to follow the flag on the fields of battle.

Yet, Mr. Speaker, while some may go, some must stay. It is well known to you, as it is to me, that a number of men on both sides of the House have attempted to leave their congressional duties and enter the Army, and have been told by the President, the Commander in Chief, that their duty was to remain and perform their legislative functions.

If the House will pardon the personal pronoun in this matter, I might suggest that within 12 hours after war was declared, I presented myself to the War Department, asking for service in the Army. I was advised by those in charge that my services could not at that time be accepted. I returned to my office and wrote the President, offering my services in the following words:

Being one of those Members of the House of Representatives who voted to declare war against the enemies of our country and feeling that I should not vote to ask some other man to do that which I myself would not do, I hereby tender to you and the Government my services to the extent of my ability in any position, high or low, to which you may assign me. I hold myself subject to your call.

To that letter the President answered as follows:

THE WHITE HOUSE,
Washington, April 9, 1917.

MY DEAR MR. EVANS: Your letter of April 7 does you great honor. I do not wonder that you feel as you do, and yet I want very earnestly to remind you that we are engaged not merely in creating an Army but also in mobilizing a Nation to perform all its functions at the highest pitch of efficiency. Surely in such circumstances it is just as much a man's duty to stay at a post such as you have been assigned to by your constituents as it is for a man to volunteer for an army. I take this view of it with greatest confidence.

Cordially and sincerely, yours,

WOODROW WILSON.

It will be observed from this correspondence that I am not alone in my views that the patriotism of this House is not to be judged solely by the question of whether or not they have entered the service as a soldier. The standard should be rather whether or not the man has performed the duty assigned to him to the best of his ability.

The American people are patriotic. This House is patriotic, the men of both sides of this House are patriotic, and a discordant note here and there uttered by someone who so far forgets himself in this time of stress should be and will be rebuked by the American people, and no man should clothe himself with the paraphernalia of partisanship and cry aloud for a change in the political complexion of this House on the theory that it will insure a more vigorous prosecution of the war.

Such a claim is insincere. It is an arraignment of the administration and calculated to bring condemnation on the Congress as well. These critics dare not attack the President and his administration, because they know the American people are back of the President in this great war, and when they attack the majority side of this House they attack the Congress and themselves as well.

Any Member of this House who contends that the Sixty-fifth Congress has failed in a most vigorous prosecution of the war must admit that if the Congress failed that his side of the House failed, because the action taken by this House has been practically the united action of both sides of the House. This Congress as a whole has been a loyal, hard-working, patriotic body; the most far-reaching legislation has been passed, most of it practically without division. Money has been appropriated in amounts that stagger the conception of men. Bills have been passed that have subjected 25 per cent of the male population to military duty. Is it possible that any other Congress of whatever complexion could pass measures that would insure a more vigorous prosecution of the war? No, Mr. Speaker. The American people are not interested in partisan politics, and the

man who goes before his constituents and asks to be returned simply because he belongs to this party or that party, or the man who attempts to divide the people in this great time of trial, will have ample time after the 4th of March next for meditation on his folly. Partisanship at such a time is fraught with peril both to the individual and the Nation.

Personally, I am seeking reelection at the hands of my people, but I have not and I shall not make a partisan speech. When I entered my primary campaign I issued a brief platform to my people in the following words:

"Loyal and patriotic citizens are not thinking in political terms these trying times. Elected to Congress as a Democrat, I put Americanism above party. I voted for war; I voted for conscription; and for appropriation of thirty billions to carry on the war. I have voted for every measure Woodrow Wilson, President of the United States and Commander in Chief of the United States Army and Navy, has deemed necessary to carry on the war. I am for war until the bloody sword falls from the palsied hand of the Hun. Compromise is unthinkable. There is no room under the flag for the man who is not willing to give his all for the successful prosecution of this war. In this crisis there can be no middle ground. Men are either for America or against America. I am for America. This is my platform."

By that platform I propose to stand or fall.

The War in Europe.

EXTENSION OF REMARKS

OF

HON. JOHN R. CONNELLY,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 7, 1918.

Mr. CONNELLY of Kansas. Mr. Speaker, I had hoped to secure the time to make some extended remarks touching the matter of the war in Europe, and give to the House the benefit of some observations that I, in connection with the other members of the Naval Affairs Committee, was permitted to make in our recent trip to the war-torn countries across the sea. It may be possible at some future day, when the business of the House will permit, without delaying the bills that must be acted upon, to be permitted to say something along this line, but for the present I will be content to touch briefly upon this subject and deal with some other matters that may be more or less personal in their scope.

In the beginning let me say that the Secretary of the Navy believed that a trip to Europe to look into matters directly under the supervision of the Navy Department, and incidentally under the direction of the Committee on Naval Affairs, would more than justify him in sending the committee to Europe, and I feel that when the House and the country are informed of some of the things that were looked into, as they will be from time to time, they will agree that the trip was not without a good purpose and will finally see that the Secretary of the Navy was justified in sending the committee abroad at this time.

We presume that most of the members would have much preferred to make the trip at a time when the traveling was fraught with less danger than sea travel into the war zones is at this time, but they all felt that when millions of our soldiers and sailors were taking the chances of destruction from enemy submarines, that they should not hesitate to go on any mission where their duty appeared to call them. It was the good fortune of the committee to find that at the time they were to sail the Government was sending one of her best battleships across to cooperate with the other battleships already over there, and together, again cooperating with the fleets of our allies in taking care of the naval situation in European waters. We sailed from an American port on July 13. There were 13 members of the congressional party, and an even 1,913 people aboard ship. If there is any bad luck connected with the number 13, our sailors refuse to recognize it; and upon this trip, at least, if there was luck connected with the number it was good luck, for the voyage was a very fortunate one so far as real dangers encountered.

Speaking about luck in the American Navy, they appear to be a lucky lot of men and officers as a whole, but no one who is permitted to take a trip in one of these great fighting machines will agree that anything is left to luck or chance, except it be those things that organization, plans carefully laid and executed,

diligence, bravery, intelligence, and care can not foresee. The American people can be justly proud of the American Navy, its equipment, its organization, and, above all, the splendid character of the officers and men that constitute its personnel. Men in Congress may differ as to plans, as to the extent, and as to what the equipment should be, but no one who has any knowledge of the personnel of the Navy will contend that its officers and men are not competent, courteous, and brave. The American people have been shown that their Navy is efficient when they see that nearly 2,000,000 of our brave soldiers, along with their supplies and their equipment, have been sent across 3,000 miles of water infested with the enemy submarines with a loss of life and property that is indeed small in comparison.

While the purpose of the committee in visiting the war countries was to look into matters pertaining to the Navy, they were permitted, of course, to see the great work our soldiers are doing, to meet them in camp, to see them on the march, to view them in action, to visit the grounds made immortal by their bravery, their sacrifice, and their heroism, and to hear from every tongue praise for their gallantry and bravery in battle, and for their gentlemanly conduct in their association with their allies. The success of the American soldiers in the fights that they have had with the enemy has put confidence in them, so that man to man they believe that they are better fighters than the German soldiers, and the spirit that they have put into the contest has given hope and improved the morale of the soldiers from other lands who are fighting with them in this conflict. Whatever may be the blows that are to be given and taken before the victory is won and peace has come, in my humble opinion the future historian will say that the American soldiers at Chateau-Thierry fought the battle that turned the tide and started the allies on the way to ultimate victory. When in the future the military men of the world shall sit down in scientific study to account for that battle, they will be put to some loss to find by what rule of military computation the American soldier, many of whom had been picked up less than a year before from the farm and field and from the mills and mines of this free Republic of the west, could meet and put to flight the picked troops of a nation that had made the preparation for war its prime business for well nigh onto half a century. It can not be said that they were better trained troops, for they were not. I believe that it can be accounted for only because they had the spirit of freedom in their hearts, the light of liberty in their eyes, and the blood of free men and women in their veins.

I am free to confess to you, as I stood and viewed this field which gave American soldiers a chance to show to the fighting men of the world that they knew the game and could play it when forced to do so. I thought in my simple faith that it could happen only because He who finally directs and controls the trend of the lives of men and nations willed that it should be so. From that hour to this there has been but little, if any, doubt about the final result. The war may and perhaps will continue for some months, and it may last even a year or longer, but the outcome is certain. The central powers are on the way to defeat, and whether they stay out for one month or two years the result will be the same.

We landed at Thurso, on the northern shore of Scotland, and traveled over a considerable portion of Scotland, England, Ireland, France, and through the northern part of Italy and as far south as Rome. We were impressed with the fertility of the country and the splendid crops in almost every section that we traveled. The wheat crop looked especially fine, and the yield will certainly be very satisfactory. There was much live stock in Scotland and Ireland. The pitiful part of the whole farming operations was to see only the women and children and the very old men working in the fields. Practically all of the man power of the country is in uniform, either at the front or helping to supply the army with supplies and munitions. In many places the younger women were working in the machine shops and munition plants.

Mr. Speaker, war is, indeed, a serious business, and in my opinion any people or nation can well afford to sacrifice much in order to avoid it. It should come only when it must come to save a country from invasion or to save the honor and integrity of a people. But when any country is forced into war, and its cause is just, then there can be but one time to end that war and that is when the enemy is defeated. Germany is not defeated as yet. She is still strong in many of the essentials to continue the war. Our people should not be misled either by reports or by their enthusiasm. If the war were to end to-day, with Germany in possession of millions of square miles of territory conquered by the sword she would have spoils sufficient to pay for all the wealth that she has expended in preparing for and conducting the war. No right-thinking man or woman wants to see this war continue an hour longer than an

honorable peace can be had, for to permit any nation to conquer a great share of the Continent of Europe, and then obtain terms of peace that would permit her to retain that territory, would be to announce to the world that strong nations were still entitled to subject weak nations by the sword, and take their lives, their lands, and their countries. To permit such a peace, would be but to encourage other countries who covet lands to enlarge their boundaries, to follow the example that had been set by the central powers of Europe. This is but one reason why the war should go on until we have a victory, and it is not the greatest reason. In my opinion, if we do not go to that place on the way to victory that we can not only destroy militarism in Germany but command such a peace that no other nation will be again permitted to threaten the peace of the world by preparations for war, then whatever else we gain we have lost the essential.

If the nations of the world are to go on through the centuries taxing their peoples to support great military establishments, each trying to build greater than the other, and finally ending in another war even more terrible than the one that the world finds itself in at the present time, then all the sacrifice of life and treasure that the people have made in the last four years will, in my opinion, have been to no purpose. If one nation of the world is permitted to prepare to conquer and subdue other nations, then the other nations must continue to prepare to resist that nation that is thus permitted to prepare. To kill militarism in the world it must be wiped out wherever its hydra-head shows. This war may be after all the opportunity of the peace-loving people of the world to destroy militarism. If it is destroyed, it must not be destroyed in one country and permitted to flourish in another. One nation can not run the risk of not preparing for defense so long as another country is permitted to prepare for conquest. The one great opportunity to put an end to war, with its toll of death and destruction, will come to the nations of the world at the close of this war if the people are alert. It will not come unless they are vigilant—unless they take a hand and see that it does come.

Mr. Speaker, I know that the great rank and file of the people, regardless of their past affiliations, are loyal and true. I have never insulted the intelligence of the good people of my district by casting any reflections upon the loyalty of men and women who have not always agreed with me in matters political. I hope that I shall not so forget myself as to commit this very grave error.

Mr. Speaker, as the political campaign warms up this fall I hear a good deal said about one section of the country being favored above another. In some States it has been profitable for a half a century for men seeking political preferment to indulge in the cheap expedient of trying to arraign one part of the country against the other. Even at this time, with the boys from the East and the West, from the North and the South all baring their breasts to a common cause, you will find here and there men who are willing to seek political favor by yelling, "The South is in the saddle," or that other cry equally as false and if possible even more foolish, viz, "They have fixed the price of the products of the northern farmer and permitted the products of the southern farmer to go unrestrained. Let us see what the facts are: The one thing that the northern farmer raises upon which the price is fixed is wheat. Everyone who has any information at all knows how necessary it was to control the price of foodstuff in order that our soldiers and the soldiers of our allies should be fed and at the same time put an end to profiteering by those who would buy from the farmer and sell to the Government unless some regulations were made. This was necessary with wheat and it was necessary with other things as well. The southern farmer raises rice, and he is the only farmer that does raise rice; the price of rice was fixed by the Government. The southern farmer produces much of the hemp, all of the cane sugar that is produced in the country, and the price is fixed by the Government on these. The South is a great producer of lumber, of coal, and of steel; the price was fixed on these. But the western critics say that cotton has been left untouched. If that were true, would it be more than corn and oats and barley and dozens of other articles that are raised by the northern farmer? But what is the truth?

The truth is, that much of the cotton raised by the farmer of the South has the price already fixed upon it. The cotton linters, which is the short cotton used by the Government to make smokeless powder, was all commandeered early in the war and taken at a price that was but little more than half the amount it was selling for in the open market. The price was fixed on cotton seed, on cottonseed meal, on cotton cake, and the various other products of cotton, but not on the long staple cotton. We are not defending the administration for not fixing the price on cotton. We do not know whether it should have

been fixed or not; we are only answering the cheap cry of the politician in distress for an issue and showing by the record that while one of the products of the northern farmer has been fixed in price, that many of the products of the southern farmer have also had the price fixed upon them. Again, we hear the cry going up that the Government is spending its money in the South to the detriment of the other sections. How foolish the claim. Perhaps the Government is spending more money in the old rock-ribbed Republican State of Pennsylvania than it is in the whole 11 States of the South. The Government is not spending the money in Pennsylvania because it is a Republican State, nor is it spending the money in the South because it is Democratic. It is trying to spend the money in Pennsylvania for the things that Pennsylvania can produce better, more economically, and more expeditiously than can other communities; the same can be said of the money that is being spent in the South and elsewhere. The cry that partisanship has played a part in the preparation for this war falls to the ground when it is honestly investigated. Men have been selected for their special fitness rather than because they belonged to any particular party. Hardly a prominent man in the Republican Party in the country but what has been assigned important work to do, not because they are Republicans but because they were good men and were fitted for the work. The big men in the Republican Party are not saying anything about it being a partisan war. There is some talk going the rounds, but it has not come from the strong men in the party; they know the claim is not true.

Mr. Speaker, while the boys from the homes of the North and the South, from the homes of the East and the West, from the homes of Republican and Democrat and Socialist alike, are marching and fighting and dying in a foreign land, side by side, in a common cause and for the flag that represents liberty and freedom, I shall not believe that these men who are seeking to plant strife in the hearts of the American people during this campaign are speaking the sentiments of our people. It seems to me that this is the time of all times when partisan advantage might very well be left until another and a more proper season. My purpose and my ambition shall be submerged at this time in one great thought, that of standing behind the boys who are fighting our battles on land and sea. My aim shall be to continue to uphold the hands of the President in his fight for a glorious victory and a lasting and honorable peace. In the doing of these things I feel that I will best represent the good men and women of the sixth district of Kansas, who have repeatedly honored me by sending me here as their Representative in Congress.

SPEECH

OF

HON. CLAUDE KITCHIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday and Saturday, September 6 and 7, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12863) to provide revenue, and for other purposes.

Mr. KITCHIN. Mr. Chairman and gentlemen of the committee, gratitude forbids me to proceed without first acknowledging my profound thanks and appreciation of this manifestation of your confidence in the Ways and Means Committee and of your willingness to hear its chairman. Such kindness and courtesy makes us feel mighty good, and I thank you again.

I shall ask the members of the committee to indulge me for just about one hour without interruption, for I think, perhaps, within that time I shall be able to give to the House a pretty clear idea of the general principles of the bill. After that I shall discuss in detail the several titles and provisions of the bill, and will then be glad to try to answer all questions propounded.

Mr. Chairman, the President, in his message to the joint session of the two Houses on May 27, 1918, urged the wisdom and necessity for additional revenue legislation at this session. The day following I said upon the floor of the House that the President, the Commander in Chief of the Army and Navy of the United States, having spoken, our duty was clear, and that we would go to the task promptly and without complaint. The second day following the President's address the Committee on Ways and Means was called together by its chairman, and it at once began to prepare for a revenue bill. We sent notices throughout the country of public hearings, to be begun on June 6. We held public hearings from June 6 until July 17,

and, with the men who appeared and those who submitted their suggestions by letter or brief, every element of business and economic thought was before us.

The views of every class of people, of every class of business, corporate and individual, were expressed. We refused none an audience. After the hearing the 23 members of the Ways and Means Committee at once began to prepare the bill. We called to our aid the thought and judgment of noted economists and business men. We had with us experts of our own and the experts from the Treasury Department. We had before us the revenue acts of past years and the data connected with them. We had before us the revenue acts of the Civil War, of 1862 and 1864. We compared them and studied all the subjects embraced in them. We studied the policy, the operation, of those acts and the collections under them. We had before us the acts of Great Britain, France, Canada, and other belligerents passed during this war. We compared the subjects and rates of taxation in them and the conditions in each one of the respective countries with the conditions here. We had, too, before us the experience of the Treasury Department in the operation and enforcement of the revenue acts of 1916 and 1917. The Secretary of the Treasury and his assistants gave us the benefit of their judgment and study. The Excess Profits Advisory Board came to our aid and gave us the benefit of their thought, judgment, study, and experience in interpreting and assisting in administering the present excess-profits tax act. Our committee wishes to acknowledge its indebtedness to the diligent labor, the splendid counsel, the wise suggestions of Dr. Thomas S. Adams, chairman of the Excess Profits Advisory Board, a distinguished thinker and student of economics and taxation. I also wish to acknowledge my indebtedness to Mr. Stuart Cramer, a member of the advisory board, whose wide business experience and close touch with and knowledge of business conditions enabled him to be of most valuable assistance, and to Mr. J. E. Sterrett, also a member of the advisory board, who stands in the front of expert accountants in the United States.

The committee had three fundamental thoughts in the preparation of this bill: First, to get the needed amount of money. Second, to place the burden as equally and equitably and where it could be borne as easily as possible. Third, to cooperate with the Treasury Department in preparing a bill that would have back of it not only the committee and the House but the administration and the Treasury Department. I feel confident that on the whole we have such a bill. I feel confident that when the House fully understands it the bill will receive practically its unanimous indorsement.

There was no partisanship in any of the meetings and conferences of the Ways and Means Committee. [Applause.] There was no partyism; all was patriotism. [Applause.] No one could have told, had he walked in and seen its 23 members, Republicans and Democrats, sitting around the table, working in their shirt sleeves during the hot summer weeks and months over this bill and watching the votes day after day and many votes a day, which was Democrat and which was Republican. [Applause.] He would have been impressed that there were 23 patriotic men trying their best to get for this Government—to help win the war—\$8,000,000,000 in the best, the wisest, and the least burdensome way possible. [Applause.]

On June 5 the Secretary of the Treasury wrote to the chairman of the committee that it would be necessary to expend at least \$24,000,000,000 for this fiscal year; that the financial conditions of the Treasury and the war requirements made it necessary that we prepare a bill that would get \$8,000,000,000 in taxes from the people of the United States. Here is the bill. It will produce, according to the estimates of the experts, \$8,182,000,000 for a 12-month period. It marks an epoch in the history of revenue legislation of the world. Eight billion dollars is twice as much taxes as this Nation or any nation since the beginning of time has ever attempted to collect from the people in any one year. It is over three times more than the gold-value collections from taxes and bonds by this Government during the whole four years of the Civil War. We collected in taxes during those four years \$730,000,000, which includes about \$65,000,000 of miscellaneous receipts, not properly taxes, and sold \$2,565,000,000 of bonds, from which in gold-dollar value the Government only received \$1,695,000,000, making a total gold-dollar-value collection for the four years of only \$2,425,000,000.

Eight billion dollars! Nearly four times as much as the Government collected in taxes and bonds during the four years of the War between the States! It is \$2,500,000,000 more than the total amount expended both by the Confederacy and the Union Government during the four years of war. And more—it is larger by \$1,000,000,000 than the combined tax collections

in the year preceding the beginning of the present war of the United States, Great Britain, France, Russia, Japan, Italy, Germany, Austria-Hungary, Turkey, Norway, Sweden, Spain, Portugal, Mexico, and all the South and Central American Republics. Can you conceive a bill of such magnitude? And yet, gentlemen of the House, the committee believes, after the most mature study and investigation, that this \$8,000,000,000 can be raised in this country without destroying or ruining or seriously crippling a single industry or embarrassing a single individual. [Applause.] When we contemplate collecting in one year from the people, without serious protest from them, this colossal sum of money, our vision of the bigness of this Nation, of the greatness and the power and the strength and the limitless possibilities of this magnificent country, enlarges beyond imagination. [Applause.] The passage of this bill, together with the enormous bond issues, with the draft act, from which an army of 5,000,000 fighting men is being sent across the seas, and millions more if necessary, with a production and building program of ships and munitions on a scale never before dreamed of, speaks, with clear emphasis, in a voice loud enough to be heard to the uttermost parts of the earth, the fixed and inexorable determination of 110,000,000 Americans that the fateful and stupendous task, solemnly undertaken by this Nation on April 6, 1917, shall, without halt or hesitation, be completely and everlastingly finished. [Applause.]

The courage, the constancy, the sacrifices of the brave boys we are sending to the front will forever challenge the admiration of mankind and receive encomiums well merited from all history. [Applause.] Their daring, their heroism, and their achievements will, we may be sure, make the centuries ring with the glory of American arms. [Applause.] But after the whole thing is over, in the calm retrospect of all the miraculous things done by nations during this war, in my judgment that which above all will arrest the thought and the wonder of the world will be the quickening change by this Nation from the condition of peace to the condition of war, the raising from the ranks of peaceful citizenship of an Army of millions and sending it trained and equipped across the sea to fight, 3,000 miles from base, the expansion of its Navy and its merchant marine, the increased productivity of its mines and factories and fields, the marshaling together of its resources—its wealth, its genius, its industry—all without parallel in the annals of human conception and endeavor, all organized and mobilized, scarcely without break or hitch, not within years but within months, into the single thought and purpose and effort to enable the United States to play her part in the most awful drama of blood and force ever staged before the world—these, Mr. Chairman and gentlemen, will be the marvel of mankind, the wonder of history. [Applause.]

I want to call the attention of the House to the economic wisdom and necessity of raising by taxation \$8,000,000,000. Many wise, patriotic men, legislators as well as business men, have taken the position that that is entirely too much money to be collected in taxes from the people, but that we ought to issue a larger proportion of bonds than is proposed to finance the war. I fear that such opinion is not based upon a careful survey of the whole situation. I think that the patriotic business man or legislator, when he fully comprehends the real situation confronting his country now, and which must confront it in the future, will agree to the wisdom and the necessity of raising this amount by taxes at this time. Let us consider for a moment the vast expenditures this country is making. The Treasury Department estimates that our actual expenditures for this fiscal year will be at least \$24,000,000,000. Mr. SHERLEY, the chairman of the Committee on Appropriations, in his estimates, declares that \$24,328,000,000 will be necessary this fiscal year. We must not be surprised later on to find that the required amount will be many billions more. We have sold ten billions of bonds. We must sell \$16,000,000,000 more in order to provide the \$24,000,000,000 for the fiscal year.

Sixteen billions of bonds and \$8,000,000,000 of taxes make \$24,000,000,000 that we must have. We shall then have issued \$26,000,000,000 of bonds; to this we must add the \$2,000,000,000 of war-savings certificates authorized, which may have to be refunded into bonds after the end of the five-year period. Twenty-eight billions of dollars of bonds in less than two years! Have you thought about the annual interest charge on those bonds? At 4½ per cent on the \$26,000,000,000 of bonds, there will be \$1,105,000,000 fixed interest charges every year—over \$400,000,000 more in interest charges alone than we ever collected in any year in the history of this Government from all sources of taxation prior to the present war.

For the \$28,000,000,000 bonds and war savings certificates there will be a billion and one hundred and ninety million dollars fixed annual interest charges alone, about twice as much

as this Government ever collected in taxes from its people in any year in its history prior to the outbreak of the European war. How are we going to pay it? If we raise no more by taxation, contenting ourselves with existing statutes, but finance by the issue of bonds the requirements of this fiscal year, then we will have \$32,000,000,000 of bonds. It would take one-third of the total amount of taxation to pay the annual interest alone. When we contemplate this, knowing, too, that incomes and profits are bigger and higher now than they can possibly be after the war, larger now than ever before in the history of the Government, and that a financial reaction must come sooner or later, under such circumstances a failure to largely increase collection by taxes would prove a big and fatal mistake. We know that there must surely come a reaction, a falling of prices on every product of the mines, field, and factory, just as surely as the sun will rise to-morrow. It has come after every war in this country and after every war in history, and it must come again. When wheat is selling for a dollar a bushel and corn for 50 cents a bushel, and cotton for 8 and 10 cents a pound; when shoes, hats, and everything manufactured and produced are selling for one-half or one-third less than they are now, where will be our incomes and our profits to pay even the interest charges on these immense amounts of bonds? We must take thought, my friends, for the future. We must take thought for posterity. The business man of to-day who hopes to be the business man of to-morrow, the large income and profits tax payer under this bill, is chiefly concerned in the thought. The reaction will affect him most, and from him will be most expected in carrying the burdens of taxation in "hard times." I put it to his sound business judgment, I put it to the economic judgment of the country, is it not the safe and wise thing to do to raise every dollar we can by taxation now and to issue as few bonds as possible? Every one billion or every one hundred million dollars we collect now by taxes means that much less mortgage on the energies and the business, that much less handicap on the industries of the people after the war for generations to come.

Should we not now, while we are able, discount by taxation that mortgage, lighten that handicap, as far as possible? I have discussed the matter with many business men and find that they are willing—and should they not be willing now, while their incomes and profits are larger than ever before?—to pay large taxes in order to keep such a burden off from them and their children when the war is over and the reaction comes. [Applause.]

A comparison of our expenditures with those of other nations will give us some idea of the bigness of things we are doing that require such colossal expenditures on our part. We are expending this fiscal year 100 per cent more than any nation engaged in the war. Great Britain, expending, perhaps, more than any other nation except the United States, will expend in round numbers only about \$12,000,000,000. This country, this Government, will, according to the Treasury estimates, expend \$24,000,000,000, and, in my opinion, we will be lucky to get off with that. My fear is that we will be required to appropriate this year several more billions to meet our war requirements.

Some very intelligent and thoughtful people have advocated fixing a certain relation between bonds and taxes with respect to our expenditures; that is, some claim that 25 per cent of the expenditures should be derived from taxation and 75 per cent from bonds, or 33½ per cent from taxation and 66½ from bonds. There can be, and should be, no such thing as a fixed percentage relation between bonds and taxes. If possible, we ought to pay the whole war expense without bonds. It is sound business, sound economics, to pay as we go. But this is absolutely impossible. Then the only standard, the only rule, is that this Nation ought to collect as large a sum in taxes each year during this war as possible and mortgage the future by bonds as little as possible. [Applause.]

Have you thought about the enormous amount of governmental expense that we must incur annually after the war? I make this prediction, that never again will the Government get along any one year after the war on less than \$4,000,000,000, exclusive of postal expenditures. We collected from customs and internal revenue for the three years preceding the war less on the average than \$675,000,000 a year. If the interest rate goes no higher, if we issue no more bonds than is now contemplated, if the war ends—and I pray God it will end—by next July, we shall have a fixed interest charge to pay, to say nothing about the principal, of \$1,200,000,000, or nearly twice as much as was raised from all sources of taxation before the European war began.

Put that down: \$1,200,000,000 for fixed annual interest charges. Should the war last a year from next July our bonded

indebtedness will be no less than \$40,000,000,000. It is difficult to conceive how we can keep the interest rate down to 4½ per cent, though we shall make every effort to do so.

If we keep it at 4½ there will be a fixed annual interest charge of at least \$1,700,000,000 to pay. Assume that we shall not issue any more bonds than is now proposed for the fiscal year and that the limit is \$28,000,000,000. That would make, as I have said, \$1,200,000,000 interest charge.

Is there a man inside or outside of this House that believes, no matter what the terms of peace may be, no matter how much talk there is or has been or will be about disarmament or limitation of armaments after the war, that the Army and Navy of the United States will ever cost us less than \$1,000,000,000 a year? It ought not to cost nearly so much. Many of us may hope it will not, but vain will be the hope. We need not discuss now the reasons why it will not be less than \$1,000,000,000.

Adding this to the annual interest charge, we have \$2,200,000,000. Pensions, in one shape or another, and insurance will cost us not less than \$1,000,000,000 a year, probably more. But put it down a billion. That is \$3,200,000,000. It will certainly take another \$1,000,000,000 a year to finance all the other functions of the Government, including all the new things and new functions which this war has and will graft upon it. The expenditures after the Civil War were more than five times as great as before the war. For the five years immediately preceding—from 1856 to 1860, inclusive—the annual ordinary expenditures were a little less than \$62,000,000; for the five years immediately following the war—from 1866 to 1870, inclusive—they averaged annually \$371,000,000.

Gentlemen, make up your minds that never will the expenses of this Government and the taxes imposed on the people after this war be less than between \$4,000,000,000 and \$5,000,000,000 annually. This is six times more than we were collecting before the war began. That immense sum has got to come from the people annually after the war, and after the reaction. It has got to come, sooner or later, out of 90-cent and a dollar wheat, 50-cent corn, 8 and 10 cent cotton, 4-cent sugar, 4 and 5 cent cattle and hogs, \$3 shoes, \$1.50 coal, and out of all other products with like reduced prices. Would it not be almost a crime, gentlemen, on the people who survive the war and on those who shall come after us, and a crime against our Government, if we insist on fastening on them billions of interest-bearing indebtedness and refuse to pay now as much of the war expenses as we can? Let us put as few burdens on the future as possible. Remember that the future generations—your children and grandchildren and my children and grandchildren—will have their own burdens in the future to carry. They will have their own troubles to bear. They will have their battles to fight, their own wars to win. It will be all that they can do to take care of themselves in the future. Is it right, is it just, is it fair to them that we should transfer to them any burden which we ourselves should bear?

I will repeat what I said when we presented the bill of last year: I would feel like a miserable coward if I put a single dollar of debt upon my children and grandchildren, who had nothing to do with this war, who had no voice in declaring and in waging it, when I could pay that dollar now myself. [Applause.] I will not throw upon my children a duty that belongs, from every principle of right and equity and justice, to myself. [Applause.]

I believe the collection of \$8,000,000,000 from taxes is demanded not only in the interest of safe Treasury conditions and sound economics but by the forward-looking business men as well as by the public. A fixed relationship between bonds and taxes has been justified by its advocates by reference to the bonds issued and taxes collected during the Civil War, which they claim was about 25 per cent in taxes and 75 per cent in bonds. As my distinguished friend from Illinois [Mr. CANNON] will recollect and know, during the Civil War, while the face value was \$2,565,000,000, we received for the bonds issued in gold value only \$1,695,000,000 and raised by taxation \$730,000,000. That is 30 per cent in taxes. But let this be remembered, that during the Civil War the main war-tax measure was not passed until 1864. Had the tax act of 1864 been enacted in 1861, 70 per cent of the Civil War's expenditure would have been financed by taxes. But the mistake made then was in not passing the act in 1861 instead of 1864. The statesmen of that time intended what was best, but they found out their mistake when too late. Our Government is avoiding such a mistake during the present war.

It has been asked by some here and elsewhere why we did not raise hundreds of millions of dollars by the tariff. They say that there has been a great increase in imports, an increase in imports of about \$1,000,000,000 or more since 1912, 1913, or 1914,

and therefore why not get \$500,000,000 or \$600,000,000 in customs duties? I have seen it stated often in newspapers and magazines, and I have heard it sometimes on this floor, that if the Payne-Aldrich Act were on the statute books now, we would raise about \$500,000,000 or \$600,000,000 from customs duties.

I hope no Member of this House will deceive himself about the tariff. In my judgment, we would not have raised by the Payne-Aldrich tariff \$75,000,000, certainly not \$100,000,000, more if it had been on the statute books. Let me enlighten some of these kindly friends of mine on my left here who smile at that. Three-fourths of all the increase in importations since the beginning of this war have been on articles which were on the free list in the Payne-Aldrich Act and retained on the free list in the Underwood Act. If the Payne-Aldrich Act had been in force, its rates were so much higher on dutiable goods than in the recent act that such goods would have decreased in importation, and therefore we would have received less taxable imports, but we would have had the same increase in the free import articles. Do not let us deceive ourselves. I am going to give you some reasons now why the committee, Republicans and Democrats alike, did not turn to the tariff for increase of taxes: In 1912 the total imports of the United States under the Payne-Aldrich Act were \$1,653,000,000. Our total free imports were \$881,670,000 and our dutiable imports amounted to \$771,594,000. For the fiscal year ending June 30, 1913, the last year the Payne-Aldrich Act was in effect, the free importations were \$987,500,000 and the dutiable \$825,500,000, or a total of \$1,813,000,000.

Last year—in 1917—our free importations amounted to \$1,848,840,000, or \$861,000,000 increase in the free imports. And that is where the increase is—in the importations of the free articles. The imports of dutiable articles were \$810,514,000 in 1917. With the lower Underwood tariff, with freer access to our markets, with less taxes to pay to get into our markets, our imports of dutiable articles were \$15,000,000 less than the imports of dutiable articles with the higher tariff in 1913. Now, these figures of increased importations will fool you unless you make careful analysis and investigation of them.

The free imports were \$1,848,000,000 in 1917, and in 1913, under the Payne-Aldrich Act, only \$987,524,000. So it would appear that there was at least 100 per cent more imported in 1917 than there was in 1913 in free imports. But let us not deceive ourselves, as we would by these statistics unless explained. These figures are on values. The quantity, the pound, the bushel, the yard, show an increase of less than 50 per cent. Values have gone up tremendously—import values and home values—and when one speaks in dollars and cents, sees this big increase, it misleads him. For instance, during the fiscal year 1917 almost four times more wool in value came in than in 1913, yet in quantity less than twice as much. Of sugar, more than 100 per cent increase in value was imported in 1917 over 1913, but less than 30 per cent increase in quantity.

Take hides, one of the biggest items of free importation under the Payne-Aldrich Act and under the Underwood Act. The value of hide imports in 1917 was a little more than twice as much as the value in 1912, but the quantity in pounds showed an increase of only about 30 per cent. I could give dozens and dozens of such instances in other articles of imports. So do not let values deceive and mislead you.

Mr. MADDEN. Will the gentleman allow me to ask him a question?

Mr. KITCHIN. I wish the gentleman would not interrupt me now.

Mr. MADDEN. It is right on that point.

Mr. KITCHIN. I will yield to the gentleman, but I hope no one else will ask me any questions until I get through with this statement.

Mr. MADDEN. What difference does it make what the quantity was if the payment of the tax for the right to come into American ports was on an ad valorem basis?

Mr. KITCHIN. Of course, the gentleman ought to know more about the Payne-Aldrich Act and the Dingley Act and all Republican acts than I do. I do not say that in any partisan sense, but it had always been my understanding that one of the chief differences between the Payne-Aldrich Act and all other Republican tariff acts and the Underwood tariff and all Democratic tariffs was that the Democratic theory demanded an ad valorem on as many articles as possible, while the Republican theory was an ad valorem on as few articles as possible, and specific duties, by the pound, by the yard, and by the bushel, on as many articles as possible, so that it would make a great deal of difference. The existing act written on the ad valorem theory, with the high increased values of importations, is failing to get any considerable customs revenue. It is hard, therefore, to conclude that a tariff act framed on the

specific theory would produce more revenue, especially when the quantities of dutiable articles have greatly decreased during the war. But one of the points I was trying to make—I am sorry the gentleman did not get it—was this, that the higher the value and the higher the ad valorem or specific tax the less the imports that would come in. The rates would be so high after a while that no imports would come in. Does any man, on or off this floor, believe that if we had had the average rates of the Payne-Aldrich tariff or the Dingley tariff or the Underwood tariff on all of these free imported articles I have mentioned, we would have had anything like the quantity of imports? Why, the very fact that they are on the free list, that there is no tax to bar or handicap them from coming in, caused that great increase in importations and the demands of our factories in these times for the raw materials that are on the free list. Remember that although the rates in the Underwood tariff are a great deal lower than under the Payne-Aldrich tariff, the imports in quantities of articles on the dutiable list have greatly decreased. In quantities they have decreased over 33½ per cent.

What Democrat or Republican or any other man here or elsewhere would want a tariff on these free articles if we could get along without it? For instance, would you want a tariff on hides to handicap our manufacturers and put the price of leather products higher to the consumer? During the fiscal year 1917 there came in \$216,000,000 worth of hides. Hides were duty free under the Payne-Aldrich Act, as they are under the existing act. The increase in the importations of raw materials on the free list was required by our manufacturers in order to supply the necessities of the people and the Army, and also to some extent our allies. These raw materials, as I said, are absolutely necessary. There is not a manufacturer in the United States who would think that hides, or wool, or lumber, or copper, and so forth, under present conditions ought to bear a tariff tax. There is not a man in this House who, under existing conditions, would have the courage or audacity to go out and demand a tax on hides or wool or lumber. Are not shoes and every product of leather costly enough now? Are not clothes and every product of wool high enough now? Is not lumber and every product of lumber expensive enough now? Is there a man in the United States who would want by the operation of law to make these articles of necessity more expensive to the people than they are now? As I said, the increase in importations is largely in articles on the free list under all of our revenue bills, Republican as well as Democratic.

Mr. CARTER of Oklahoma. Will the gentleman yield?

Mr. KITCHIN. For a question.

Mr. CARTER of Oklahoma. Can the gentleman give any information between the price of hides now and four years ago?

Mr. KITCHIN. I think they are between 50 per cent and 100 per cent higher.

Mr. WOOD of Indiana. Will the gentleman yield?

Mr. KITCHIN. I would rather not yield further just now.

Mr. WOOD of Indiana. I want to answer the question of the gentleman from Oklahoma.

Mr. KITCHIN. Very well.

Mr. WOOD of Indiana. The price of hides at this time is what it was four years ago. The high cost of leather is not controlled in any manner by the price of hides.

Mr. KITCHIN. I fear that the gentleman from Indiana is mistaken. I do not know what it is to-day, but in 1917 the average import price was 25.9 cents per pound, and in 1913 it was 17.3 cents per pound. In addition to hides, let me cite a few other articles on the free list under the Payne-Aldrich Act, as well as the Underwood Act, whose imports have largely increased since the war.

Take fibers, the imports of which amounted in 1917 to \$67,000,000. Shall the manufacturer's cost be increased on these articles by a high tariff tax?

Take cotton. Forty million dollars' worth was imported in 1917. I want to ask my good friend from Pennsylvania [Mr. MOORE], who has always been shouting for the cotton tax, why he does not carry out his protective doctrine and put a tariff tax on the \$40,000,000 of cotton that is coming into the United States in competition with the cotton of my friend from South Carolina [Mr. LEVER] and in competition with the cotton of my friend Mr. CRISP from Georgia. Let me say, however, that neither Mr. LEVER, nor Mr. CRISP, nor any other gentleman from the cotton States asks for such a tariff.

The imports of chemicals upon the free list amounted in 1917 to \$87,000,000. The imports of nitrate of soda were \$44,000,000 and made up over half of this amount. Do you want to raise taxes on that?

In 1917 the imports of copper and copper pigs amounted to \$126,000,000. These articles were duty free under the Payne-

Aldrich bill and under the Underwood bill. Are you willing to stop or restrict them from coming in by putting a high tariff tax on them?

Gentlemen, no man demands an increased tariff now really for protection, because he knows the present war is a greater protection to our industries than all the tariffs. Whenever you hear a man demanding a protective tariff on manufactured articles, or on articles that must go into the manufacture of other articles that we must have during the war, it is for politics, not for legislation. It may be good politics, but it is bad legislation.

In 1917 \$1,800,000,000 worth of articles were imported free of duty for the people and for the manufacturers. I do not believe that any man—I do not believe that the manufacturers themselves—would demand a cent of tariff put on those articles unless it was absolutely necessary to do it to get the required amount of revenue.

I fear the time is going to come during this war when we must resort to a tariff tax on many imported articles. It will be a tax upon consumption, and in many instances on the necessities of life. We will most probably have to come to a tax on coffee, on tea, on cocoa, and many other articles of necessity, but, gentlemen, as long as we can do without it, as long as we can get the necessary money out of profits and income and luxuries and semiluxuries of this country, I believe it is the duty of American statesmanship and American patriotism to do it. [Applause.]

Mr. LONDON. Will the gentleman yield?

Mr. KITCHIN. Just for a question.

Mr. LONDON. What proportion of the imports comes from allied countries?

Mr. KITCHIN. I really can not answer the gentleman, but I would say that of the dutiable imports a large majority comes from the allied countries.

Mr. LONDON. In view of the democratic countries that are pouring out their blood on the battle fields, would it be fair to put an obstruction to the freedom of commerce among the allied nations?

Mr. KITCHIN. There may be merit in the gentleman's suggestion.

Now I want to read an extract from a speech made by the gentleman from Michigan [Mr. FORDNEY], in which I most heartily agree. The gentleman from Michigan has said so many good things on the floor that it is hard to pick out any particular one. The gentleman from Michigan, in his very able speech on the revenue bill we presented last year, laid down in my judgment the proper principle and proper course to pursue now, as we did pursue it last year, with reference to the tariff and consumption taxes. I agreed with him then and I agree with him now. What is there said by the gentleman is another reason why the committee did not take up the question of the tariff.

I agree with the gentleman from Michigan that raw materials which our manufacturers and people must have ought not to be taxed unless absolutely necessary. The difference between him and me is that in normal times he would apply it only to raw materials the like of which we did not raise or make here but which come from outside the United States. I would apply the principle to both materials made outside and inside the United States when necessary for our manufacturers and people, and especially when they enter into the general consumption of the necessities of life.

The gentleman from Michigan [Mr. FORDNEY] said:

There are many articles of raw material that ought to be brought into the country free of duty.

We agreed then and we agree now.

I have never been in favor of putting a duty on noncompetitive products, such as tea, coffee, rubber, hemp, and so forth.

I agree with him exactly. In the last revenue bill as presented to and passed by the House you will remember that it included a tax on tea and coffee. I am not giving away any secret when I say it, but I was never more gratified in my life than when the vote was taken in the committee on the question of including tea and coffee, to look over the table and find that Mr. FORDNEY and I were voting alike against such a tax. I said to myself then that the patriotic day had come, when as partisan, as stand-pat, as reactionary, as rank a tariff protectionist as FORDNEY and as rank a tariff-for-revenue-only antiprotection Democrat as myself were voting together on a tariff question. [Laughter.] I thought to myself that partisanship, party politics, had really been adjourned. [Applause and laughter.] To continue the quotation from the gentleman's excellent speech:

Therefore, it is a Republican principle to bring into this country free of duty articles that we must have but do not produce.

Mr. Chairman, over two-thirds of the increase in these importations are articles of that kind. We agree on that, because

we put them in the Underwood Act. We found them in the Payne Act. Let me read further:

But neither the Committee on Ways and Means nor any other group of people can sit here without extended hearings and fix scientific rates of duty to be added to existing laws or substituted for existing law and get them anywhere near correct.

The gentleman from Michigan spoke the truth. Every man knows it. You can not do it, and that is one reason we did not attempt to do it.

And further:

At the present time it would be a very difficult matter for the reason that prices are abnormal all over the world as regards manufactured articles, agricultural products, and so forth. I want to assure you gentlemen that with my long experience on that committee it is my candid belief that no body of intelligent men conscientiously working together night and day can now sit down and put a scientific rate of duty on imports in less than from five to seven months of effort.

Mr. FORDNEY was absolutely right. If he was right then, that position is right now, and that is the position the committee took. Mr. FORDNEY and all of us took that position. In the first place, a high tariff is not needed now for protection. If it is needed at all now, it is only needed for elections. We do know that the prices of all articles and all conditions of manufacture throughout the world are abnormal and that they are changing from day to day. We all know that Mr. FORDNEY was right when he said it would be impossible under such conditions to write any kind of correct protective tariff. I am glad that Mr. FORDNEY and the committee agree. It was understood that we would not resort to taxes by tariff unless it was absolutely necessary to get the \$8,000,000,000 of revenue.

Gentlemen, these taxes are going to be hard to bear and hard to pay. They can be paid, however, without crippling or destroying any industry, without embarrassing any individual. They will be paid. I want every taxpayer, however large or small he may be, to know that while the taxes levied under this bill are going to be hard to bear, the millions of boys over yonder in the trenches are bearing greater burdens and greater hardships for their country, and they are doing it gladly and willingly and heroically. [Applause.] The mother whose boy is taken from her, the wife, the child, whose husband or father is taken from them and sent before German guns, are making sacrifices. It is hard for them, but they are doing their part nobly and patriotically. The taxes levied by the bill are going to be hard on the taxpayers, but can not they stand it? Are they not willing to make sacrifices in dollars and cents when others are making them in flesh and blood? All have said that they are willing and ready to do their bit for their country. The time has come when every patriot should do his all for his country. [Applause.]

Mr. DYER, Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. One moment. I want every business man and every taxpayer to know that every dollar of tax that he is going to pay under this bill, whether many or few, is going into the Treasury to help this Government save its life in the great struggle now going on. The patriotism of a man who is unwilling, not only to give his few dollars, but his every dollar, if necessary, to save this country and this great Government, under which he is making his profits and building up his business, can well be questioned. Let the men who pay these taxes, big or little, remember that every dollar of the taxes is going to help not only the Government save its life, but going to help to preserve and save the very business from which they make their profits. But there is no tax here that is going to bear with extreme harshness upon a single industry or man in this country. I lay down this proposition that there will not be a business institution or industry in the country which, after it pays the taxes levied under this bill, is not going to be as well off, and in an overwhelming majority of cases better off, than it was during the three prewar years of 1911, 1912, and 1913, or in 1914.

That is the fact, and that being the fact how can the taxpayer complain? I want to say here that I have found the business men patriotic. I find most of them fully alive to the situation and willing to pay these taxes. More, they feel it to be a patriotic privilege and pleasure as well as a patriotic duty to pay. Let me now call attention to some facts which may astound but will convince you that business can stand these taxes. In the prewar years 1911, 1912, and 1913 the average net income of the corporations of this country were \$4,122,000,000. In 1915 it was \$5,310,000,000, an increase of over \$1,000,000,000. After paying their taxes they had over \$1,000,000,000 clear net profit more than the prewar year average. In 1916 they had \$8,765,000,000 of net income, over \$4,500,000,000 more than in the prewar years. After paying all their income taxes and all other taxes they had clear net profit of over 100 per cent more than they had during the prewar period. In 1917, according to Treasury estimates upon the returns so far tabulated, the net in-

come will reach \$10,500,000,000, about \$6,500,000,000 more than in the prewar period. After paying all the taxes of that year they then have over 100 per cent more than the prewar profits. After paying the taxes levied by this bill, the income tax on corporations, and excess profits or war-profits tax on corporations, there will be left to the corporations over \$1,700,000,000 more income and profits than their prewar average net income for 1911, 1912, and 1913. Can not they stand it? Who, in the face of these facts, will stand here or elsewhere sponsor for the plea that corporate business can not stand the tax? Ah, they can stand it and they will stand it, and most of them will gladly stand it.

Mr. HAMILTON of Michigan. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. HAMILTON of Michigan. Are there Treasury statistics to back up the very important statement which the gentleman has just made?

Mr. KITCHIN. Yes, sir. They are facts of record in the Treasury Department.

Mr. HAMILTON of Michigan. I do not care to interrupt the gentleman to reply now, but he can insert them in the Record if he will.

Mr. KITCHIN. While I am sure that I gave the figures correctly, I will read them from the report of the Commissioner of Internal Revenue. I have it right here.

Mr. HAMILTON of Michigan. I suggest the gentleman incorporate them in his speech. It is very useful and important.

Mr. KITCHIN. I will now give the gentleman the figures from the report. In 1911 the corporate net income was \$3,503,000,000; in 1912, \$4,151,000,000; 1913, \$4,714,000,000. They were the three prewar years. It averages \$4,122,000,000 for these three years. In 1914 it was \$3,940,000,000; in round numbers, \$4,000,000,000. In 1915 it was \$5,310,000,000; in 1916 it was \$8,765,000,000—over 100 per cent more than the prewar average. In 1917 it was \$10,500,000,000—two and one-half times more; and in 1918, the calendar year of 1918 to which these taxes will apply, it is estimated by the Treasury Department that the corporate net income will be \$10,000,000,000.

Mr. CALDWELL. That is net?

Mr. KITCHIN. Yes; that is net income. Suppose we consider the net income after payment of all Federal taxes. In 1915 the Federal corporation income taxes amounted to about, in round numbers, \$57,000,000 on the \$5,310,000,000 net income. In 1916 the tax only amounted to \$180,000,000 on the \$8,765,000,000 of income or profits, and in 1917 the tax amounts to about \$2,200,000,000 on the \$10,500,000,000 of income, but when you deduct \$2,200,000,000 from \$10,500,000,000 you still will have, after paying all of the taxes of last year's act, 100 per cent more net corporate income than the prewar average net income. According to the Treasury estimates of corporate income for 1918, after paying all the taxes levied under this bill, corporations will still have \$1,784,000,000 more clear net income than they had in the prewar years, before deducting any Federal tax.

Mr. REED. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. REED. If my colleague has gotten the information he desires before the committee, I desire to ask the gentleman what does he estimate will be the entire income of the American people for 1918?

Mr. KITCHIN. The net income of corporations is estimated at \$10,000,000,000 and individual net incomes at about \$7,400,000,000. But, of course, no returns of incomes under \$1,000 as to single persons and under \$2,000 as to married persons are made, and one can not tell what those incomes amount to.

Mr. STEPHENS of Nebraska. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. STEPHENS of Nebraska. Is the \$10,000,000,000 estimated for 1918 after the taxes are paid?

Mr. KITCHIN. It is estimated that the net income of corporations will be \$10,000,000,000 this year to which this act will apply. The income tax and excess and war profits taxes must be paid on and out of that.

Mr. MADDEN. Will the gentleman yield?

Mr. KITCHIN. One minute. After paying taxes under this they will have then over a billion and a half net profit more than the prewar period average net income. I will say here the committee thinks and I believe every one here will think when he knows the facts or considers the matter that a corporation or an individual that has a business or industry is entitled now under existing conditions to more profits or more income than before the war on the capital invested.

If a corporation was making, say, \$60,000 on \$1,000,000 before the war I think that corporation is fairly entitled to make under present conditions \$100,000 now, or 10 per cent before the war-profits tax attaches, and I doubt whether the corporation

would be in as good financial condition making \$100,000 on a million dollars now as it was when making \$60,000 on a million dollars before the war. The price of everything, the price of material, the cost of expanding the buildings, of putting in new machinery, is much more now, and the risk it runs with the high-priced inventories and falling prices when the reaction comes is so much greater.

We can illustrate it in this way in order to make it pretty plain. Here is a corporation that made \$60,000 on \$1,000,000 investment before the war. If it distributed that \$60,000 to the stockholders the stockholders could take the \$60,000 and buy more of the necessities of life and things they desired than they could with \$100,000 now paid to them. We all know this is true.

Suppose the corporation did not pay the earnings to the stockholders but retained them in the surplus. Then the \$100,000 now will not be equal to the \$60,000 before the war for the reason that the corporation could buy more machinery, do more building, make larger expansions of the plant with the \$60,000 before the war than it could with \$100,000 now. It will take twice as much now to expand a plant, or build a plant, or put in machinery, as it did in 1911, 1912, 1913, or 1914. Therefore a 10 per cent profit now is not more than, if as much as, a 6 per cent profit or net income before the war.

Mr. MADDEN. I would like to ask a question. The gentleman made a statement that the corporation net income was \$10,000,000,000 last year, or about that. I understood him to say also that the individual income was about \$7,000,000,000—

Mr. KITCHIN. Corporation \$10,500,000,000, individuals \$7,000,400,000.

Mr. MADDEN. That would not necessarily make an aggregate income of \$17,000,000,000, would it? Most of the incomes of the individuals come from the corporations, do they not?

Mr. KITCHIN. I did not say that that was a total net income of individuals and corporations. I was giving what individuals had to pay taxes on; that is, the income of individuals that was subject to the tax, and the income of corporations that was subject to the tax. Now, answering the gentleman's question, I would say, of individual net income that of the taxpayers' net income, certainly over 33 per cent comes from dividends.

Mr. LONGWORTH. I can give the gentleman the figures exactly. It is estimated that four billion seven hundred millions of the individual net income of 1918 will be subject to the normal tax.

Mr. KITCHIN. But that is after deducting the dividends and exemptions of \$1,000 and \$2,000. Dividends, I will say to the gentleman, for 1916 included in the individual returns amounted to \$2,136,000,000.

Mr. MADDEN. That will be deducted from the \$7,400,000,000?

Mr. KITCHIN. Yes; if you wanted to get the difference between the two. Understand that the \$2,000,000,000 or more of dividends is not subject to the normal income tax but only to the surtax.

Mr. MADDEN. They are subject to the normal tax through the corporation but not through the individual?

Mr. KITCHIN. The corporations pay only 6 per cent under existing law and 18 per cent under this bill; unless the income is distributed in dividends or paid out of earnings or profits in discharge of bonds or other interest-bearing obligations, in which case the rate will be 12 per cent and the individual normal tax will be 12 per cent on all of the income subject to normal tax in excess of \$4,000 and 6 per cent not in excess of \$4,000. But the surtax, which will tax the dividends, will run up from 2 per cent to 65 per cent, according to the amount of the income.

Mr. MADDEN. The only thing I wanted to make clear was that it was not an aggregate income of both individual and corporation of \$17,000,000,000. It was less than that?

Mr. KITCHIN. Of course, part of the individual incomes as returned was made up from dividends from corporations, and to that extent was also included in the aggregate of corporate returns. It was accurate for the purpose of taxation, for the reason that there are two kinds of taxation—one on corporations, upon which no surtax is levied, and one on the individual, upon whom both a surtax and normal tax is levied.

Mr. KNUTSON. Reverting to what the gentleman was speaking of a short time ago, is it not a fact that factory values and equipment values have increased just as much as the money has depreciated; that is, the purchasing value of money, the value of the factory?

Mr. KITCHIN. Yes; substantially in a large number of cases.

Mr. KNUTSON. That would offset it, would it not?

Mr. KITCHIN. The 6 per cent would not offset it at all. You get a salary of \$7,500. If you made \$7,500 in 1911, 1912, and 1913, how much more do you think the \$7,500 would buy for you then than now?

Mr. KNUTSON. Twice as much.

Mr. KITCHIN. Your salary is fixed, of course.

Mr. KNUTSON. But the point I wanted to make is this: We will assume that a factory and its equipment was worth \$100,000 in 1913. Is it not fair to assume that that factory today, providing it had been kept up, would be worth \$175,000 or \$200,000?

Mr. KITCHIN. Of course that would somewhat depend on the amount the factory was earning in profits.

Mr. KNUTSON. I mean the intrinsic value.

Mr. KITCHIN. In intrinsic value I would say, in some industries, it would be worth \$200,000; in some it would be worth \$150,000. Of course some industries make a good deal more than others. I will say that 10 per cent now is not more than equal to 6 per cent formerly, taking the depreciation of the dollars, as suggested by the gentleman, into account.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BORLAND. Does not the bill provide that in certain classes of corporations where their work has been greatly stimulated by the war and their facilities are liable to be greatly depreciated after the war activities come to an end, they are allowed an amortization deduction of some kind?

Mr. KITCHIN. Yes; we have provided for that, we think, in a reasonable way.

Mr. BORLAND. Will not that amortization deduction figure in their returns and reduce the amount of net returns they are making for taxation?

Mr. KITCHIN. Yes.

Mr. BORLAND. How much is it estimated it will be?

Mr. KITCHIN. We have provided that it can not exceed 25 per cent of the net income of any taxable year.

Mr. BORLAND. What will be the aggregate? Will it not reduce that aggregate of \$10,000,000,000?

Mr. KITCHIN. We allow them now to make deductions for depreciation and depletion, as in the case of mines and oil and gas wells. I think the amortization provision will apply largely to corporations that will go into making real war material for the Government. Take ferromanganese, for example. The War Trade Board has been appealing to different individuals and corporations to make it. One man came to me and said, "I am willing to put \$200,000 in a plant to produce it, but the war might end at any time and my contract would then end, and although I might make \$50,000 or more the first year I would have \$200,000 invested in a plant that would be worthless. I would lose on the transaction, and therefore can not afford to put up or expand my plant unless I can be sure of a reasonable amortization provision." The amortization provision is intended mostly to take care of cases of that kind. The departments dealing in war contracts are very anxious that we should incorporate such a provision in this bill. We have endeavored to properly safeguard it, however; for instance, the 25 per cent limit with reference to the amortization deduction that can be allowed in any one taxable year.

Mr. CHANDLER of New York. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CHANDLER of New York. I have seen the statement made that the aggregate of national income is \$40,000,000,000. Will the gentleman state what are the chief sources of income?

Mr. KITCHIN. It has been variously estimated at from \$40,000,000,000 to \$65,000,000,000. In the sense in which it has come to the public various estimates have been made, some \$40,000,000,000, some \$50,000,000,000, and some \$60,000,000,000, and some more. I am inclined to think it is in the neighborhood of \$60,000,000,000; that is, the total income of all persons and all businesses as distinguished from the taxable income. The gentleman must understand that for 1917 only 3,055,000 out of the 110,000,000 people made any tax returns. Of those who had incomes of over \$4,000 there were only 615,000, leaving 2,440,000 reporting incomes less than \$4,000. I would estimate that the income of single persons earning less than \$1,000 per year and married persons earning less than \$2,000 per year would amount in the aggregate to \$25,000,000,000 or \$30,000,000,000. The aggregate national income to which the gentleman refers includes income from every source, from labor of every kind in all kinds of industry, farm labor and factory labor, even including the income from families and children of farmers and farm tenants.

Mr. CHANDLER of New York. Ex-Congressman Fowler wrote a book entitled "The Issues of 1916." In that book he stated that the annual income was \$40,000,000,000 a year, and explained that this combined the agricultural and mechanical products of the year. Is that a correct statement, in the gentleman's opinion?

Mr. KITCHIN. When he wrote that book I suppose \$40,000,000,000 was about right. That meant the gross. That is what

the \$60,000,000,000 or \$65,000,000,000 which is now estimated by some means. Suppose I am a merchant or a farmer and sold \$10,000 worth of goods or cotton. Suppose it cost me \$8,000 to produce and sell it. My net income, my taxable income, would be only \$2,000, though my gross income was \$10,000.

Mr. CHANDLER of New York. Has the gentleman any figures to show that if the national income is \$40,000,000,000 a year what the net increase in the national wealth would be? How much of that is increase to the Nation? Since 1847 the national wealth has increased \$200,000,000,000; how much in any individual year I do not know; but it is stated in the same statement that \$40,000,000,000 a year represents the annual increase of national income. How much of that may be said to be a national increase of wealth?

Mr. KITCHIN. I could only guess on that, and my guess would be that not over \$10,000,000,000 or \$15,000,000,000 would be the increase. Gentlemen are apt, in seeing such large estimates of the national income, to get mixed up between gross income and net income. I would say that with the total net income of last year, after allowing for living and business expenses, the Nation's wealth did not, in the aggregate, increase over \$15,000,000,000.

Mr. CHANDLER of New York. If the gentleman will let me ask him another question I will not bother him further. I want to state one or two considerations, however, before I ask the question. In relation to how much of the expenses of this war should be borne by the present generation and how much should be passed on to the future, according to the gentleman's statement the net increase in the national wealth would be about \$15,000,000,000, and when we consider that in the last 70 years there has been an increase of \$200,000,000,000, and now it is an increase of \$15,000,000,000 or \$20,000,000,000 annually, and when we consider that this generation is furnishing the blood and the life, so to speak, that is being devoted to this war, and when we consider that the increase in population in 50 years has been over 50,000,000 people and the country in the future will be more populous than it is now, why is it that, for the sake of "democracy made safe," the future generations should not pay more than 50 per cent of the cost of this war?

Mr. KITCHIN. They will pay much more than 50 per cent, as we are issuing bonds for much more than 50 per cent of our expenditures. The gentleman leaves out of his calculations what we call "the increase from unearned increment." For instance, I know a friend who had a tract of timber that cost him \$10,000 fifteen years ago. He has not put any labor on it since, but it is now worth \$100,000. That is what is called "unearned increment." There is, of course, an increase in value in property all over the United States.

The gentleman speaks of this generation furnishing the blood and life for this war and that future generations are shedding no blood, and should therefore be made to pay for the war. The argument is not one from the gentleman's heart. It is not a manly plea. It does not come from the high and noble instincts and impulses in man, which I know the gentleman possesses in a preeminent degree. He is, without consideration, but repeating what others have said. How often have we heard the plea and argument that "we of this generation are shedding our blood and sacrificing our lives to keep America from the grasp of German militarism. We are doing this to make it safe for the generations coming after us. Future generations are shedding no blood, making no sacrifices, and they ought to be made to give the money, while we are giving blood and life." That is the argument of the slacker, the tax dodger. It is the plea of cowardly avarice. In reply to that let me say: Of all this \$8,000,000,000 that we are going to levy by this bill not one-hundredth part of 1 per cent will be paid by people who are going to shed any blood [applause] or by people who will ever get within 3,000 miles of a German gun. [Applause.] I do not want to hear that blood argument here or elsewhere any more. But if we must hear it, in humanity's name let the men, inside or outside of this Capitol, who make it go to the front, get into the trenches, and shed their own blood for their country and use that, and not the blood of others, as a plea to escape taxation. [Applause.]

Mr. FIELDS. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. FIELDS. In addition to what the gentleman has said many of the young men who are shedding their blood to-day will become a part of the tax-paying army of the future.

Mr. KITCHIN. And if the pay-by-bond theory prevails, these millions of boys who have no incomes now, who are making nothing out of the war but giving their all to the war, will have to come back here and through their lives and through their children's lives they will have to plod on to pay the interest and principal of these bonds in the future. They are now fight-

ing the war out for us, and after they win there seems to be some among us who would bring them back and make them also pay for it.

Within two years after every war in the history of the world, less than one-half of 1 per cent of the people of the country issuing the bonds have owned 95 per cent of the bonds. I can not believe it will be any different in this country. I lay it down as a safe proposition that within less than five years after the war, whether we issue \$28,000,000,000 or \$48,000,000,000 of bonds, less than 1 per cent of the people of the United States will own 95 per cent of the bonds. Then, what is the proposition? The proposition is to levy no taxes on the immense incomes and profits being made during and, most of them, out of the war, but to sell bonds so that the people who are making such incomes and profits can, instead of paying part of them into the Treasury to help win this war, put them into bonds, so that my children and your children, and the boys who come back from France and their children, will have to pay tax tribute all their lives to those who profiteered out of the blood and sacrifices of the brave Americans who went to the front. [Applause.] They demand that we finance the war by issue of bonds so that these exorbitant, excessive war profits, this blood money of the profiteers, can be put into their purchase and thereby make 99 per cent of the American people pay yearly tribute for all time to come to the other 1 per cent of the people. [Applause.] I know my friend from New York agrees with me in condemning such a proposition.

Mr. CHANDLER of New York. No; I do not.

Mr. KITCHIN. Well, I had as high opinion of the gentleman's fine judgment and splendid sentiments and impulses as that of any man in this House, but I am afraid I will have to revise that opinion. But let us see. The gentleman must not understand the proposition.

Mr. CHANDLER of New York. Now, be intelligent before you are witty, and I will ask the gentleman—

Mr. KITCHIN. All right. I will answer, provided you will be one or the other. [Laughter.]

Mr. CHANDLER of New York. If you will assist me, I will.

Mr. KITCHIN. Go ahead.

Mr. CHANDLER of New York. I will ask the gentleman if it is not the policy of all the nations of the earth engaged in this war to impose some of the expenses of conducting the war upon posterity?

Mr. KITCHIN. Yes.

Mr. CHANDLER of New York. Is that because the nations can not raise the funds with which to pay for the war or is it because they feel that posterity, being the beneficiaries of what we are now doing, should bear a part of the financial burden?

Mr. KITCHIN. Both propositions are contributing causes. I think there is a small element that exerts influence in the matter. I think there are some men in the Parliament of Great Britain and in the legislative bodies of the different countries, including the Congress of the United States, who believe that the war should be made an opportunity for a few people to amass fabulous fortunes; that the flesh and blood and bones of the boys who go to the front should be used by a few who remain at home as a means to get rich; and that the Government ought to furnish to such few a field of investment, like Government bonds, for the blood money, for the war profits they are making, so that all the people will forever hereafter be mortgaged to them. I think some people will be found who will agree with the gentleman upon that. I think that is one element. I think they have their influence. [Laughter.] However, I wish to disclaim for the gentleman from New York any such sentiment or belief.

It is true that no nation engaged in the present war could finance the expense of the war by taxes alone. All must resort to bond issues to supply the required amount of funds. I believe the United States is in a position, if the necessities of the situation demanded it, to raise more by taxation than all the allies combined or all the central powers combined.

Mr. HARDY. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HARDY. Does not the gentleman think that he stated in his opening remarks the correct principle—that it is our duty to raise by taxation every dollar we can without crippling our industries?

Mr. KITCHIN. Yes; and that is the wise, business, economical thing to do.

Mr. MILLER of Washington. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MILLER of Washington. Does it not also tend to maintain our bonds at par?

Mr. KITCHIN. That is a wise and valuable suggestion, and it is true. I believe that if we had not proposed to raise eight

billions in taxes and let the tax laws remain as they are, raising \$4,000,000,000 a year, and had proposed to increase the bond issue \$4,000,000,000, that there would have been a greater disparity between market value of our bonds than there is now.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. SMITH of Michigan. Is it not true that in 1917, when we had a corporate net income of ten millions, corporations were running on general products, and now in 1918 and in the future we will be limited to war essentials, and will not that cut down the income?

Mr. KITCHIN. The gentleman, I fear, to some extent is right. We have made an estimate of a half a billion dollars' deduction on incomes for that. The gentleman will notice that since 1914 there has been a large increase each year in the corporate income—four billions in 1914; 1915, five; in 1916, eight; and in 1917, ten billions and a half. He will observe that in the estimates we have cut out all increase and estimate that the actual amount of corporate income for 1918 will be \$500,000,000 less than in 1917.

It is said in some quarters that by the income and excess and war profits tax provisions we are not leaving business enough incentive and stimulus to make it go forward in the future; that this bill will chill its ardor; that the taxes are so high that in 1919 and 1920, if this bill remains on the statute book, the incomes and profits will greatly decrease, because men of the industries will not have incentive enough to cause them to put forth their best efforts.

That is a slander and a libel on the business men and the industries of this country. The business man of America contemplates, as you and I do, that his is the most wonderful and magnificent country, the best and greatest Government, the freest and most beneficent institutions on earth, and to help save and preserve such a country, such a Government, such institutions, in the life and death struggle now going on, is an incentive and an inspiration enough to stimulate him to put forth his best and every effort, even if every dollar of his profits must go to his Government. [Applause.]

Gentlemen, I want to make one observation which is a pleasant and a happy one to me. I believe I have helped actively to frame as many if not more revenue measures than any Member of this House, dead or alive, since the beginning of the Government. It is a pleasure and a happiness to say that although this is the biggest bill by 100 per cent ever presented in any legislative body on earth, I have heard less complaint and received fewer protests against the taxation in this bill than any bill I ever helped to write. [Applause.]

You need have no fear, my friends, that the taxpayer is going to condemn or criticize you for putting on the statute books this bill in its essential features. He fully understands and appreciates its necessity and is ready to cooperate.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONGWORTH. Would it not be fair to say that from the beginning we have not had a protest from business as such on account of the size of the taxes in any case?

Mr. KITCHIN. I think that is true. I can repeat what the gentleman from Ohio says. Substantially, we have not had a protest from business or industry as such against the levying of taxes, although these taxes bear most heavily upon business and industry.

Mr. REED. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. REED. I was interested in the gentleman's prediction that in a few years this vast bonded indebtedness of the United States would be held by perhaps one-half of 1 per cent of the population.

Mr. KITCHIN. I would say 1 per cent.

Mr. REED. Does not the gentleman think that it is a calamity that the average American citizen is not able to keep a Government bond? Take the man who has one or two thousand dollars to invest. In the past is it not true that he did not want to invest it in Government bonds because he could do so much better somewhere else, and is it not really a calamity that they go to somebody who feels that he can hold them.

Mr. KITCHIN. Yes; it is; but you can not help that. Thousands of people will buy a bond of \$50 or \$100 or \$1,000 when really they are not able to do it and have to go out and borrow money in order to do it. I would say that half of the bonds that have been purchased by the people have been purchased with borrowed money. The few bonds I have I have had to borrow the money at 6 per cent to pay for them, and still owe most of the borrowed money. There are several millions of people who buy bonds from a purely patriotic motive to help the Government win the war, and afterwards

they will feel that the Government has had the benefit of the money and that the time has come when they are unable to longer hold such an investment, that they need the money for other necessary purposes.

Mr. HARDY. Mr. Chairman, for historical information, is it not a fact that the French people, after the Franco-Prussian War of 1870, so far as the great multitude of them was concerned, pursued the course of buying French assignats and keeping them?

Mr. KITCHIN. Yes; but the largest part of them got out of the hands of the people within five years after they were purchased.

Mr. HARDY. I had always understood otherwise.

Mr. KITCHIN. The gentleman means of the 5,000,000,000 francs that were used to pay the Prussian indemnity?

Mr. HARDY. Yes.

Mr. KITCHIN. I would say that not 10 per cent was held by that class.

Mr. Chairman, I really did not intend to take this long before I reached the details of the bill, and I very much fear that the patience of gentlemen will be exhausted. The truth is that if they are as tired as I am, they will be perfectly willing to have me stop, but I want to explain somewhat in detail the several provisions of the bill, and while I go along I shall invite questioning by any gentleman here, assuming the questions are for the purpose of getting information or for having the provisions of the bill more thoroughly explained.

Mr. LONDON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONDON. A short time since I asked the gentleman whether he did not consider a tariff fundamentally wrong in time of war as between nations who are engaged in a common enterprise.

Mr. KITCHIN. As between the allies?

Mr. LONDON. Yes.

Mr. KITCHIN. I think it would not be unwise or unjust for the allies during the war to make arrangements for as free commercial intercourse as possible.

Mr. LONDON. In other words, you have to take a world view of the situation, particularly in time of war.

Mr. KITCHIN. Yes.

Mr. LONDON. Of course I always take it, even in time of peace. [Laughter.]

Mr. DOREMUS. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. DOREMUS. I would ask the gentleman if he intends to explain to the committee at some stage of the proceedings the so-called amortization provision?

Mr. KITCHIN. Yes; I shall get to that.

THE BILL IN DETAIL.

I am going to take up the bill in detail, and if gentlemen do not understand the provisions I shall be glad to try and make them clear. The first observation I desire to make as to the details of the bill is that the committee has embraced in one bill instead of two or three bills all the internal taxes. We have taken the internal taxes of the acts of 1916 and the two acts of 1917 and have embraced them in one general act, so that the taxpayer or others interested will have one act before them without going backward and forward to two or three others. That is true, except as to isolated taxes like the filled-cheese and the oleomargarine tax and the whisky license tax. They are in bills not connected with the revenue acts. For instance, I believe, the oleomargarine tax was carried in an Agricultural bill. We do not disturb them.

TITLE I. DEFINITIONS.

The first title in the bill is "Definitions." I believe gentlemen who carefully read and consider the bill will congratulate the committee on its shape and get-up. In this first title the definitions apply to the whole act, such as definitions of collector, commissioner, Secretary, United States, and so forth.

TITLE II. INCOME TAX.

Title 2 is the income-tax title. The principal changes in the income taxes are in the rates. Under existing law, the normal tax is 2 per cent. As to married persons, 2 per cent from \$2,000 up. Then there is also levied an additional 2 per cent on incomes from \$4,000 up, and as to single persons under existing law the normal tax is 2 per cent on \$1,000 and over and 2 per cent additional on incomes over \$3,000. We have increased the normal tax to 12 per cent, but we provide that the tax on the net income in excess of the personal exemption and not in excess of \$4,000 shall be 6 per cent. All net income over \$4,000 subject to normal tax will be subject to the rate of 12 per cent. Surtaxes have been considerably increased. The following

table, which I will read, shows the surtaxes levied under existing law and the proposed bill:

Table showing surtaxes levied under existing law and under the proposed bill.

Incomes.	Surtax rates under—	
	Existing law (per cent).	Proposed bill (per cent).
\$5,000-\$7,500.....	1	2
\$7,500-\$10,000.....	2	3
\$10,000-\$12,500.....	3	7
\$12,500-\$15,000.....	4	7
\$15,000-\$20,000.....	5	10
\$20,000-\$30,000.....	8	15
\$30,000-\$40,000.....	8	20
\$40,000-\$50,000.....	12	25
\$50,000-\$60,000.....	12	32

Mr. MOORE of Pennsylvania. Will the gentleman yield at this point?

Mr. KITCHIN. I will.

Mr. MOORE of Pennsylvania. There have been so many inquiries from Members and others about the manner in which the income tax is computed that I would ask the gentleman at this point to explain just the manner in which an income from a salary of \$7,500, which is the amount of a Congressman's salary, will be taxed. Will the gentleman explain the process of computation provided in this bill?

Mr. KITCHIN. How much will have to be paid?

Mr. MOORE of Pennsylvania. Yes.

Mr. KITCHIN. I will get to that presently. Now, then, under existing law the surtax runs from 1 per cent up to 63 per cent on the highest bracket on incomes of over \$5,000,000. We have considerably raised the rates in the smaller brackets; that is, on the smaller incomes up to \$500,000. As you know, we are taking a good deal of the incomes above \$500,000 now under existing law and could not raise the rates upon incomes above \$500,000 very much; otherwise we would take it all. Rates have been suggested to us by some economists in this country that would take all the income of a man over a million dollars, and some have suggested taking during the war all over \$100,000. Yes, some economists and some Members of Congress have suggested rates on a million dollars that would take not only all but \$200,000 additional, because they failed to observe the fact that the surtax rates are in addition to the normal tax which applies to the entire net income in excess of the personal exemption and certain other credits for dividends, children, and interest from Government obligations. The surtax on the net income in excess of \$5,000,000 is 65 per cent, and the 12 per cent normal tax added to that makes 77 per cent.

Mr. HELVERING. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. HELVERING. The gentleman does not contend that the normal and surtax will make 77 per cent total on the whole income?

Mr. KITCHIN. Oh, no; on that bracket.

Mr. HELVERING. It will be only 71 per cent of a total net income of \$5,000,000.

Mr. KITCHIN. The income tax on \$1,000,000 will be 64.71 per cent of his total income. In other words, under this act a man whose income is \$1,000,000 will pay \$647,000 in income taxes, and a man with \$5,000,000 will pay \$3,527,000.

Mr. CALDWELL. In view of the fact there was so much criticism in reference to the last bill, can not the gentleman figure out what would have to be deducted from a Congressman's pay? Will not the gentleman give the figures on a Congressman's pay?

Mr. KITCHIN. I will give the figures on a Congressman's salary in a moment. Now, if you will turn to page 6 of the report you will notice that we have greatly increased the surtax rates in the lower brackets. A large part of the money that we must collect from the personal-income tax comes within

the brackets of \$15,000 up to \$200,000 and \$250,000. We have largely increased those rates. I am going to get to Mr. Moore's and Mr. CALDWELL's propositions in a moment. You can not figure out what a man ought to pay to the Government to help win this war by saying what per cent, whether the surtax from \$20,000 to \$30,000 should be 10 per cent or 20 per cent, and from \$30,000 to \$40,000 another per cent. You may make the whole symmetrical, but you would not know how much the fellow would pay and it would take a long time to figure it out. Here is the way the committee got at it, gentlemen. We figured on percentages for a day or two, and finally concluded that the best and most practical way to get at it was first to determine how much the whole income of various sums should pay, and work the schedule of brackets out in that manner. Now, we appreciated the immense amount of money we had to raise. We knew what that money was going to be used for. For instance, we took the case of a man making \$4,000, a man of average family with an income of \$4,000, and discussed and decided what amount, in our opinion, he ought to pay out of such income to help his Government win this war.

Then in the same way we took up the case of a man having an income of \$5,000, \$7,500, \$10,000, \$15,000, \$20,000, and so on, up through all the brackets. I do not think we had a dissenting vote against levying the rates to yield the amount of tax determined in that way. Now, then, after determining the amount that we thought persons having the various incomes should pay, we had our experts figure out the exact surtax rates in the various brackets that together with the 12 and 6 per cent normal tax would practically make the amount determined upon. Of course, you will find that the rates in the various brackets do not increase by a fixed geometrical progression. But that is the way we had to work it out in order to levy the taxes determined upon by the committee as fair and just for the various incomes to pay. In other words, if a man was getting \$100,000 net income, each of us has some idea about how much that man ought to pay to help win this war. You might say he should pay \$30,000. I might say that fellow could pay, without hurting him, \$40,000, and another man would say \$50,000. After discussing the matter, each giving his views, we came to the conclusion that a man with \$100,000 should pay between \$35,000 and \$40,000. When we figured out the percentages, it worked out that he would actually pay \$39,000. We went through the whole of the brackets in that way. I will cite several cases of incomes, giving the amount of tax under existing law and the amount under the proposed bill. They are cases of a married person, A married man with an income of \$2,500 pays under existing law \$10; under the proposed bill he will pay \$30. A man with an income of \$3,000 pays under existing law \$20; under the proposed law he will pay \$60. A man making \$4,000, under existing law pays \$40; under the proposed bill he will pay \$120. A man making \$5,000 pays under the existing law \$80; under the proposed bill he will pay \$180. A man with an income of \$6,000 pays \$130 under the present law; under this bill he will pay \$260. A man with an income of \$6,500 pays \$155 under existing law; he will pay under the proposed bill \$330. A man making \$7,000 pays under existing law \$180; he will pay \$400 under the proposed bill. Here is a gentleman that you are all interested in, the next one, a man whose income is \$7,500. Under the existing law he pays \$205 in income tax; under the bill he will pay \$470.

Mr. SMITH of Michigan. Is that net income?

Mr. KITCHIN. After taking exemptions as under existing law. That is \$7,500, and he takes his personal exemption of \$2,000 from that, and the remainder is subject to the normal tax. If you get \$7,500, you would pay \$470 under the proposed bill as against \$205 that you pay now. So that the income tax on a man receiving \$7,500 has been a good deal more than doubled.

Mr. STEVENSON. I wanted to ask if the provision as to excess profits with no investment is retained in this bill, or has that been stricken out?

Mr. KITCHIN. Individuals are only subject to the income tax. The provision in existing law to which the gentleman refers is not in the proposed bill.

Mr. STEVENSON. That covers that, and there is no provision for our being charged excess profits with no investment?

Mr. KITCHIN. No.

Mr. CALDWELL. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. CALDWELL. Why does the committee divide between \$5,000 and \$7,500, and \$7,500 and \$10,000, and then proceed on another basis?

Mr. KITCHIN. They are the brackets in the present law.

Mr. ROSE. This table the gentleman is reading from means net income in each instance, does it not?

Mr. KITCHIN. Yes.

A man with \$10,000 income under existing law pays \$355, and under the proposed bill \$845. A man with \$15,000 income pays now \$730, and under the proposed bill \$1,795. A man with \$20,000 income pays now \$1,180, and under the proposed bill will pay \$2,895. A man with \$35,000 pays \$2,980 now, and under the proposed bill will pay \$7,195. A man with a \$50,000 income under the present act pays \$5,180, and under the proposed bill will pay \$12,495. A man with \$60,000 income pays now \$6,780, and under the proposed bill will pay \$16,895.

Mr. CRISP. Will the gentleman yield to me a moment?

Mr. KITCHIN. I will.

Mr. CRISP. You stated that a man with a \$10,000 income pays \$300 and something now, and that under this bill he would pay \$845.

Mr. KITCHIN. That is right. He pays now \$355, and will pay \$845. I have had prepared a table showing the amount of tax paid under existing law and to be paid under the bill on certain specified incomes, which I will read and put into the Record. The following table shows the income tax levied under existing law and under the proposed bill for specified incomes:

Table showing the income tax levied under existing law and levied under the proposed bill for specified incomes of married persons without dependents and without dividends from corporations or interest from tax-free securities.

Incomes.	Tax under—		Per cent of tax to net income.	
	Existing law.	Proposed bill.	Existing law (per cent).	Proposed bill (per cent).
\$2,500.....	\$10	\$30	0.40	1.20
\$3,000.....	20	60	.67	2.00
\$3,500.....	30	90	.86	2.57
\$4,000.....	40	120	1.00	3.00
\$4,500.....	60	150	1.33	3.33
\$5,000.....	80	180	1.60	3.60
\$5,500.....	105	220	1.91	4.00
\$6,000.....	130	260	2.16	4.33
\$6,500.....	155	330	2.38	5.08
\$7,000.....	180	400	2.57	5.71
\$7,500.....	205	470	2.73	6.27
\$8,000.....	235	545	2.93	6.81

\$500,000.....	192,680	297,095	38.54	59.42
\$1,000,000.....	475,180	647,095	47.52	64.71
\$5,000,000.....	3,140,180	3,527,095	62.80	70.54

Mr. MOORE of Pennsylvania. Will the gentleman yield at that point?

Mr. KITCHIN. I yield to the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. I have just had prepared some figures to show how the income tax is computed in the case of a married man having a salary of \$7,500, which I would like the gentleman to listen to, in order that if they are accurate they may go into his speech at this place. A married man with a salary of \$7,500, having the benefit of a \$2,000 deduction, would pay on the first \$4,000, 6 per cent, or \$240; on the \$1,500 above the \$4,000 he would pay 12 per cent, or \$180; on the \$2,500 between \$5,000 and \$7,500 he would pay the 2 per cent surtax, or \$50; or a total of \$470.

Mr. KITCHIN. That is correct.

Mr. MOORE of Pennsylvania. If the gentleman does not object, I have also an illustration here showing the manner of computing the tax in the case of the married man who receives a salary of \$10,000. I will not read it unless the gentleman is willing that I should do it.

Mr. KITCHIN. Yes; go ahead. I will be glad for the gentleman to put it into the Record here.

Mr. MOORE of Pennsylvania. This is an example coming from an expert, showing the method of computing the income

tax in the case of a married man receiving a salary of \$10,000. A married man is entitled to a personal exemption of \$2,000 in computing his normal tax. The personal exemption of \$2,000 is only allowed for the purpose of computing the normal tax. Deduct the \$2,000 personal exemption, and that will leave \$8,000 subject to the normal tax. The normal tax would be computed as follows: On the first \$4,000, at 6 per cent, \$240; on the remaining \$4,000, at 12 per cent, \$480. The surtaxes would be computed as follows: On the income between \$5,000 and \$7,500, or \$2,500, at 2 per cent, \$50, and on the income between \$7,500 and \$10,000, or \$2,500, at 3 per cent, \$75; or a total income tax of \$845 for the \$10,000 man.

Mr. KITCHIN. That is correct. I am glad to have the gentleman's assistance, as he gave considerable study to the income tax and its rates, and no one on the committee is better able than he to explain clearly its operations.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. DENISON. Will the gentleman state for the benefit of the lonely Members of the House, who do not happen to be married, what the tax would be on an unmarried man?

Mr. KITCHIN. We have not made that high enough. That ought to be trebled. [Laughter and applause.]

Mr. DENISON. I know that it is not what it ought to be, but what I want to know is what it is?

Mr. KITCHIN. Really in this table we do not take any account of an old bachelor like the gentleman from Illinois. We figured this on real men—married men. [Laughter.] The only difference is in the exemption. The single man would have only \$1,000 exemption, while a married man would have \$2,000. My clerk informs me that he has worked it out for the gentleman's especial benefit. A handsome young man like the gentleman, who ought to have been married years ago and is now too old ever to get married, will be taxed exactly \$590, if his net income is \$7,500. [Laughter.]

Mr. RAKER. Mr. Chairman, will the gentleman yield right there?

Mr. KITCHIN. Yes.

Mr. RAKER. This \$470 is the amount a Member of Congress will pay, irrespective of what his expenses might be? He just pays \$470 tax?

Mr. KITCHIN. Yes; provided he is a married man; if single he pays \$590. Let us take a few cases in the higher brackets. According to the tables I read a moment ago, you will observe that a man receiving \$100,000, under the existing law pays \$16,180. Under the proposed bill he will pay \$39,095. A \$150,000 income now pays \$31,680, under the proposed bill \$70,095; a \$200,000 income now pays \$49,180, under the proposed bill \$101,095; a \$300,000 income now pays \$92,680, under the proposed bill \$165,095; a \$500,000 income now pays \$192,680, under the proposed bill \$297,095; a million dollar income pays under the existing act \$475,180, under the proposed bill \$647,095; a \$5,000,000 income pays under existing law \$3,140,180, and under the proposed bill \$3,527,095.

Mr. MADDEN. Mr. Chairman, will the gentleman yield right there?

Mr. KITCHIN. Yes.

Mr. MADDEN. I think the gentleman ought to explain in this connection that there is no differentiation made in these figures in respect to incomes that are derived directly from earnings and incomes derived from dividends. For example, a man who has \$20,000 from dividends and \$20,000 from other sources would not have to pay the normal tax on the \$20,000 he gets from dividends, would he?

Mr. KITCHIN. No. The committee gave most careful consideration to the question of differentiating, so far as the rate of the normal tax is concerned, between what is called "earned" and "unearned" income. The Treasury Department had suggested a differential of 15 per cent on the unearned and 12 per cent on the earned income and had given us a definition of earned and unearned income. This is the definition:

Unearned income includes rents, royalties, interest, and dividends on preferred stock.

That sounded well, but when we analyzed it, together with the officials of the Treasury Department, we found out that that would not do. We found out, for example, that a man or a woman that has \$100,000 invested in mortgages and receives \$6,000 interest would be made to pay 15 per cent on that, while another person having \$100,000 in Bethlehem, or United States Steel, or Standard Oil stock and receiving \$10,000, would pay not a cent of normal tax on that, because that is dividends on common stock of a corporation and not subject to the normal tax.

The sentiment, as you all know, regarding the distinction between so-called unearned and earned income is largely worked

up on account of a prejudice against some rich clubman in a community who, with a big income, does nothing but sport around. But four-fifths of such fellows receive their incomes not from bonds, not from money loaned, not on preferred stock, all of which, according to the definition, are unearned incomes, but from dividends on common stock in corporations.

If we took the department's definition of earned and unearned income, such incomes would be considered as earned and upon which not a dollar of normal income tax would be collected, because dividends from stocks are not subject to the normal tax. So we could not take that definition. The Treasury Department, I think, agreed with us that it would not do to take that. The committee were unwilling to make the differentiation between earned and unearned incomes with the definition of the Treasury Department; but the committee were not opposed to making what I regard as the right, equitable distinction—that is, that only that income be considered an earned income that a man makes exclusively by his personal efforts and activities, his muscle, or by his brain, outside of any capital invested. That is the only kind of earned income you can think of, and that is the only correct definition of earned income. This definition and distinction was duly considered.

But the committee found that it would have much difficulty in applying that definition, and it would not do to take that without any qualifications. My friend Schwab and my friend Gary, of the Steel Corporation, and my friend Morgan, and some others among my good friends, are making—rather receiving—salaries of from \$100,000 to \$500,000 a year. Should such salaries be considered as really earned income, earned exclusively by personal efforts and activities and be entitled to the reduced rate, while the widow who loans her money out at 6 per cent should be made to pay the increased rate?

Mr. LONGWORTH. The gentleman ought not to forget his friend Charlie Chaplin. [Laughter.]

Mr. KITCHIN. And my friend Charlie Chaplin. [Laughter.] Why, do you know, Schwab and Gary are not in the class with him? [Laughter.] It was testified before our committee that his income was over \$500,000 a year. I could not believe, and the committee could not believe, that Charlie Chaplin, by the foolish capers and fandangoes and funny things he does in the moving picture, should be considered as really earning exclusively by his personal efforts an income of \$500,000 a year, so as to let him pay on his income the reduced rate.

Mr. RAKER. Did you catch Charlie under this bill?

Mr. KITCHIN. Oh, Charlie is caught, and if you vote for this bill you will never get another free ticket to a moving-picture show out in California. [Laughter.]

Mr. TREADWAY. How about the gentleman's lady friend, Mary Pickford?

Mr. KITCHIN. I kept up with the men, but I left it to the gentleman and to Mr. LONGWORTH to keep up with the ladies. [Laughter.] I have really forgotten. Can the gentleman from Ohio [Mr. LONGWORTH] tell him? [Laughter.]

Mr. LONGWORTH. I remember that the gentleman from North Carolina told me after the hearing, but I have forgotten. [Laughter.]

Mr. KITCHIN. How much was it—\$700,000?

Mr. LONGWORTH. I think about that.

Mr. KITCHIN. Yes. We did not think they really earned that. Now, you see that salary proposition by personal effort really had to be qualified considerably. Otherwise all of these people would pay 12 per cent while the widow or orphan with a few thousand dollars from interest or rent of a farm would be paying 15 per cent.

Then we considered what other countries did in this respect. Economists in their books and other writings talk about earned and unearned incomes, and many men in office and many men in Congress talk about earned and unearned incomes, but none with any clear, definite idea of the distinction to be made between such or the definition of such. We could not find a legislature in the world, except that of Great Britain, which makes a differentiation, and Great Britain only carried that earned and unearned income differentiation up to \$12,500.

It provided that a man might have an abatement on his income earned by his personal services if it did not exceed \$12,500, but just the minute it got beyond \$12,500 all classes of income up to the million-dollar brackets paid in Great Britain are identically the same. It would be almost impossible to administer a differentiation of that kind. One can hardly conceive the complexities and difficulties of administration involved in adjusting the earned and unearned income by any definition you can make. For instance, we allow a \$2,000 personal exemption. How much of that \$2,000 are you going to allocate to the earned or unearned income? Income from dividends on stocks is not subject to normal tax. How much of

your deductions and credits are you going to apply to your income from dividends? The administrative officials in the office of the Commissioner of Internal Revenue told us that with the split normal—the 6 per cent on \$4,000 and under and the 12 per cent on over \$4,000—it would be almost impossible to administer a differentiation between earned and unearned income. After conferring with the Secretary of the Treasury and the administrative and other officials of the Treasury Department and some members of the Advisory Tax Board we concluded that a satisfactory adjustment of the matter would be to raise the normal tax from the 10 per cent which we had in the tentative committee bill up to 12 per cent and retain the split normal; that is, the 6 per cent upon the income of \$4,000 and under. This the committee did, and it so appears in the bill, and we hope it is satisfactory to the House.

I want to say that my friend LONGWORTH, since the income-tax amendment was inserted in the Constitution, has been contending that there should be a differential between so-called earned and unearned incomes; and he, perhaps, has given as much thought and study to the matter as any gentleman in the committee or in the House; and his idea always was that if you are going to have a differential, earned income should be only that income arising from personal efforts and activities and not from dividends on stocks and from many other sources, which other advocates of a differential would have included in earned income. But the gentleman from Ohio [Mr. LONGWORTH], after seeing the difficulties, perplexities, and complexities which the administration of the law would involve, reluctantly but gracefully yielded, and is now of the opinion that the provision just as we have it is the wisest and the best under the circumstances.

Mr. QUIN. Will the gentleman yield for a question?

Mr. KITCHIN. Yes.

Mr. QUIN. How would the gentleman arrive at the amount due from a man who had oil stocks, banks, railroads, and so on, amounting to an income of \$500,000,000 a year from sources of that nature?

SEVERAL MEMBERS. Who is he?

Mr. KITCHIN. I will say to the gentleman that it makes no difference from what sources a man's income is derived, whether from oil or gas, bank stocks or railroads, or from farming or personal service, whatever his income is he pays the same tax. Of course, dividends from stocks of corporations are not subject to the normal tax on the theory that the corporation pays a normal tax on the investment. The dividends from corporations are subject to the surtax.

Mr. KNUTSON. How about the gentleman's friend over there with an income of \$500,000,000?

Mr. KITCHIN. I believe the highest income, according to the tax returns, of anybody in the United States is between twenty and thirty million dollars.

Mr. GANDY. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GANDY. The gentleman spoke of \$15,000 or \$12,500 in Great Britain as being the difference between earned and unearned income, and I would like to have the gentleman state the basis of that differential.

Mr. KITCHIN. That is based on personal services alone.

Mr. RAKER. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. RAKER. Just what tax should be levied under this differential under part 1, title 2, of the bill, and what does it mean, which reads as follows:

The term "dividend" means any distribution made by a corporation out of its earnings or profits, accrued since February 28, 1913, and payable to its shareholders or members, whether in cash or in other property or in stock of the corporation. Any distribution shall be deemed to have been made from earnings or profits unless all earnings and profits have first been distributed. Any distribution made in the year 1918 or subsequent years shall be deemed to have been made from earnings or profits accrued since February 28, 1913; but any earnings or profits accrued prior to March 1, 1913, may be distributed in stock dividends or otherwise, exempt from the tax, after the earnings and profits accrued since February 28, 1913, have been distributed. If paid in stock of the corporation, a dividend shall be considered income to the amount of the earnings or profits distributed. Amounts distributed in the liquidation of a corporation shall be treated as payments in exchange for stock, and any gain or profit realized thereby shall be taxed to the distributee as other gains or profits.

Mr. KITCHIN. The constitutional amendment did not go into effect until March 1, 1913, and therefore all the income-tax acts from the act of October 3, 1913, up to the present time have excepted from the tax the profits of individuals and corporations earned prior to March 1, 1913. In other words, the surplus or profits of corporations made and accumulated before March 1, 1913, are not subject to the income tax. By the language of that provision we safeguard the Government from imposition by a corporation that desired its stockholders to escape taxation on its dividends. For instance, take a

corporation with a million dollars surplus, \$500,000 of the surplus accumulated before March 1, 1913, and \$500,000 since, and it distributed a \$200,000 dividend. But for this provision it would claim that it had accumulated that before March 1, 1913, and therefore was not subject to the tax. If it declared a \$500,000 dividend, it would claim that that was the surplus that it had accumulated prior to March 1, 1913, and that it was exempt from taxation. So we provided that the corporation must first exhaust in dividends the earnings and profits in excess of the amount of the profits or surplus they had on March 1, 1913, before a claim for exemption of the tax can be made on account of the dividends being from earnings accumulated before March 1, 1913. In other words, if a corporation with a \$300,000 surplus and undivided profits, \$100,000 of which it had on March 1, 1913, should distribute \$200,000 in dividends, such dividends would be subject to the tax, the surtax, under this bill, because that would still leave it a hundred thousand dollars surplus, the amount it had accumulated on March 1, 1913. If it issued dividends amounting to \$300,000, the total amount of surplus and profits, \$200,000 of such dividends would be subject to the surtax in the hands of the stockholders, being the amount earned since March 1, 1913, and \$100,000 of such dividends would be exempt from the tax, because that amount was earned before March 1, 1913.

Mr. RAKER. And if they issued stock to the stockholder instead of cash it would be subject to the tax?

Mr. KITCHIN. Yes; and properly so.

Mr. RAKER. Would the corporation have to pay that or the individual?

Mr. KITCHIN. The individual stockholder would have to pay the surtax on the dividends but not the normal tax. It has been suggested that we exempt from taxation stock dividends. The committee investigated that and we found that if we exempted stock dividends from taxation we would lose from three to five hundred million dollars in taxes, because most of the corporations, especially the large corporations, would pay the largest part of their dividends in stock instead of cash in order for their stockholders to escape the surtax on dividends.

Mr. RAKER. The individual receiving stock instead of cash does not pay the normal tax—

Mr. KITCHIN. No; not the normal tax but the surtax.

Mr. KINKAID. Will the gentleman yield?

Mr. KITCHIN. I yield to the gentleman from Nebraska.

Mr. KINKAID. Did I correctly understand the gentleman to say that \$20,000,000 is the largest income received by an American citizen?

Mr. KITCHIN. In 1916 it was twenty millions, and I have heard that for the calendar year 1917 it is about thirty millions.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. MOORE of Pennsylvania. I am asking this question for others as well as myself. I did not quite agree in the committee to the raising of the normal tax to 12 per cent; it seemed a little high. I did have some question as to the higher brackets; that is to say, the millionaire income. I want to ask the gentleman if it is not a fact that under this bill a man with a million dollars net income would pay 64.71 per cent of it in taxes?

Mr. KITCHIN. Yes.

Mr. MOORE of Pennsylvania. That would leave him \$360,000 free and clear.

Mr. KITCHIN. We would take \$647,000 and leave him the difference.

Mr. MOORE of Pennsylvania. And the man deriving an income of \$5,000,000 under this bill would be taxed over 70 per cent.

Mr. KITCHIN. On his total net income.

Mr. MOORE of Pennsylvania. That would leave him in his own right, free from taxation, to do what he pleased with, \$1,500,000.

Mr. KITCHIN. Yes. To state it with more exact accuracy, under the bill a man with a \$5,000,000 income would pay \$3,527,095 and would have left \$1,472,905.

Mr. MOORE of Pennsylvania. May I ask the gentleman, so that the House may have this information, why he left so large a margin on the higher brackets?

Mr. KITCHIN. Several reasons actuated the committee. In the first place, they thought that was a high enough tax to pay. The man who receives an income of \$5,000,000 does not do like most of us have to do—use his entire income for living expenses. He perhaps does not spend over \$100,000 for living expenses and the rest of his income he puts into his business, expands his business, or puts it into enterprises, corporations that begin to produce articles of consumption, that give employment to labor, and so forth. That was one reason why the committee thought that that tax was high enough; another reason was a

consideration of the bond and security situation. If we taxed that man's income higher he would seek tax-free bonds and securities, municipal and State bonds, and he would begin to dump upon the market all of his taxable securities, his large holdings, for Tom, Dick, and Harry to buy. That would un-stabilize not only the security market for ordinary securities, but it would greatly affect the security market for the sale and purchase of Government bonds. At the same time his taxable income for succeeding years would be reduced and the amount of tax collection would be correspondingly reduced.

Mr. MOORE of Pennsylvania. Will the gentleman state whether the aggregate of the smaller amounts would be equivalent to that of the larger; that is to say, the margin of the smaller-tax payers ought to be equivalent to that of the larger-tax payers, and I want to know whether that proportion has been worked out in the bill?

Mr. KITCHIN. Yes. Of course, the smaller-tax payer is able to retain a larger portion of his income—if that is what the gentleman desires to know.

Mr. MOORE of Pennsylvania. Does the gentleman feel that the proportion has been worked out equitably all along the line?

Mr. KITCHIN. I think so.

Mr. MOORE of Pennsylvania. I have my doubts about it, as the gentleman knows.

Mr. KITCHIN. Of course, one man may say, for instance, that the figure in certain amounts of income should be 50 per cent, another 48 per cent, and another 45; in certain other amounts 15 or 17 or 20 per cent. I would not make very much difference between those gradations, but, taking it by and large, I believe it is equitable and fair and just. As the gentleman knows, the committee spent considerable time in adjusting the rates so as to make them as equitable all along the line as possible, and there was no dissent in the committee, except a few thought that some of the rates were not high enough.

Mr. MOORE of Pennsylvania. Would the gentleman state, so far as he thinks it proper to do so, how many men there are in the United States, according to the returns thus far, who have incomes exceeding \$1,000,000 and \$5,000,000?

Mr. KITCHIN. In 1914 there were 60 taxpayers who had incomes of \$1,000,000 and over. In 1915 there were 120, and in 1916 there were 206. For 1917 the returns have not been completely tabulated, but no doubt the number has largely increased.

Mr. MOORE of Pennsylvania. There were more in 1917 than in 1916?

Mr. KITCHIN. Yes. One thing that strikes me as remarkable is the fact that the percentage of increases in returns was larger in the higher brackets than in the smaller ones. In other words, take the people who were making \$100,000 a year or two hundred thousand, the percentage of increase in such class in 1916 over 1915 was greater by some two or three times than was such increase in the class receiving incomes from four to five thousand dollars or \$5,000 to \$10,000; that is, wealth among the wealthier class increased more largely than among the well-to-do or the poorer class. I desire to show another thing that will be interesting to the House in this connection and that is the mammoth fortunes that some men have made and are making during this war, perhaps out of the war. Of course we will get a large part of the profits for 1918 and hereafter back in this bill. I asked the Internal Revenue Bureau to select for me 20 representative persons out of each one of the different brackets. I think we have 17 brackets in the existing law. I asked for the returns of these men in 1916 and the returns in 1917, and the returns of the same men in 1914, the year the war broke out.

Mr. HARDY. The gentleman means the same individuals?

Mr. KITCHIN. Yes. The gentlemen will be surprised at this. I am almost afraid to give some of these figures, because I fear that they will tend to produce in this country what they have in Russia—bolsheviks who will want us to revise this revenue bill and take all profits and incomes. It looks to me as though a lot of these fellows ought to have a great deal of it taken from them. We had such men in mind when we increased the surtaxes in their classes considerably. Here is one man, for instance, who was in the seven to ten thousand dollar bracket in 1914. His income was given at that time as \$7,829. In 1917 it was \$70,275.

Mr. CANNON. He must have had a contract. [Laughter.]

Mr. RAKER. Is he not the man who runs the hotels?

Mr. KITCHIN. I am going to talk some about these Government contracts, and I will show you what the committee has done, and I think the gentleman from Illinois will be satisfied. That was just a small starter. Here is one gentleman who in 1914 gave his income at \$6,038, and in 1917 he gave it at \$112,119.

He made some money, and he can pay some taxes. We are going to make that fellow pay about \$45,000 in taxes.

Mr. CANNON. But what will he have left?

Mr. KITCHIN. He will have too much left in this particular case.

Mr. CANNON. And then take the oil men and the people that have these great contracts, who make these great profits. Have you taxed them? The gentleman is interested in one or more small banks in North Carolina.

Mr. KITCHIN. As a borrower; yes. [Laughter.]

Mr. CANNON. The bulk of my income comes from little country banks that are making less money now than they did before the war. There you are. [Laughter.] It is not profit on that; it is a great burden. I am not objecting to it, but I would like to see it equalized.

Mr. KITCHIN. Now, the gentleman from Illinois has the very same spirit and feeling that the Committee on Ways and Means had in preparing this bill. When we get down to the excess-profits tax, I will explain that to his and the House's satisfaction, and I believe the gentleman will say amen to what we will do to these contractors of the Government and what ought to be done to them. [Applause.] Here is one gentleman whose income in 1914 was \$3,500, and in 1917 it was \$115,133.

Mr. SMITH of Michigan. Does that give the kind of business in which they are engaged?

Mr. KITCHIN. Yes; and a lot of it is dividends and salaries as presidents or other officers of corporations; some of it is mortgages and bonds, and some from individual and partnership manufacturing business. Here is a gentleman who gave in \$8,980 in 1914 and \$192,000 in 1917.

Mr. CARTER of Oklahoma. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. CARTER of Oklahoma. Can the gentleman explain to the committee how these few persons have made these enormous increases in their incomes?

Mr. KITCHIN. No; I can not. In all probability they are, or their corporation, are making it out of the war, and perhaps they are, as the gentleman from Illinois suggests, connected with a Government contract.

Mr. STEVENSON. Or hotel people.

Mr. KITCHIN. The gentleman from South Carolina says possibly they are hotel proprietors. [Laughter.]

Mr. MOORE of Pennsylvania. If a man gets a \$70,000,000 contract on a 10 per cent cost-plus basis, he makes \$7,000,000, does he not?

Mr. KITCHIN. Yes; I know the particular case to which the gentleman refers. By the income and war-profits tax we will get back \$5,000,000 or \$6,000,000 from the corporations holding the contract, provided the Senate does not change one or two special provisions in the bill.

Mr. MOORE of Pennsylvania. Some gentlemen seem to doubt my statement about the \$70,000,000 contract. I repeat if a certain concern gets a \$70,000,000 contract from the Government on a 10 per cent cost-plus basis, the earnings of the contractor will amount to \$7,000,000.

Mr. KITCHIN. Yes; but under this bill we will get between \$5,000,000 and \$6,000,000 of it back for the Government.

Here is another gentleman who in 1914 returned his income as \$9,822 and in 1917 it was \$202,000. Here is another gentleman who gave in \$6,786 in 1914 and \$245,275 in 1917. They are very little insignificant cases and gentlemen ought not to ask about little cases. [Laughter.] I shall present some that will or may surprise you.

Mr. HASTINGS. All the cases to which the gentleman has referred seem to be abnormal increases, and it would appear as if they had been specially selected cases. Has the gentleman anywhere just a normal increase?

Mr. KITCHIN. Every now and then we find one that is slight, and in rare cases a decrease in 1917 from 1914. They, no doubt, are cases where the fellow happened to get on the wrong side of the market.

Mr. HASTINGS. Those the gentleman has been reading have been abnormal.

Mr. KITCHIN. That is why I am giving these to show the abnormal, extraordinary income profits that are being made during this war. The list furnished me by the department abounds in large and abnormal increases of incomes in 1917 over 1914. I am not giving rare exceptions. Here is a gentleman that made \$236,000 in 1914 and only \$273,000 in 1917. Another one that made \$11,000 in 1914 and \$295,000 in 1917. Here is one with an income of \$409,000 in 1914 and \$273,000 in 1917. This is a rare exception. He lost, he got on the wrong side of the market I think. [Laughter.]

Mr. PLATT. Will the gentleman yield for one question?

Mr. KITCHIN. Here is one of \$11,000 in 1914 and \$322,000 in 1917. Let me get some good ones now.

Mr. PLATT. Practically all those increases would be classed as earned incomes rather than unearned?

Mr. KITCHIN. Most of those, yes. Most of them would be earned incomes under the definition of the Treasury Department, which I have just given to you. Here is a man who made \$63,000 in 1914 and \$565,000 in 1917; another making \$80,000 in 1914 and \$582,000 in 1917; another making \$78,000 in 1914 and \$546,000 in 1917; another making \$73,000 in 1914 and \$502,000 in 1917.

Mr. MADDEN. Does the gentleman take into account the concerns that did not make anything in 1917?

Mr. KITCHIN. Very few; they are most exceptional.

Mr. MADDEN. There are a great many of them.

Mr. KITCHIN. A very few of them. Here is one gentleman who made in 1914 \$8,241 and in 1917 \$729,000. Another gentleman made \$4,347 in 1914 and \$725,000 in 1917. Another one made \$8,523 in 1914 and \$715,000 in 1917.

Mr. HAMILTON of Michigan. Can the gentleman get the receipt for that?

Mr. KITCHIN. How to make it?

Mr. HAMILTON of Michigan. Yes.

Mr. HASTINGS. Will the gentleman object to putting the business which these men are engaged in in his statement? Does the gentleman have that information?

Mr. KITCHIN. Yes; I referred to the business a moment ago. I haven't the names of the individuals. They are given me by the department only by serial number. The one who made \$8,341 in 1914 and \$729,000 in 1917 was president of a manufacturing pipe company. The one who made \$4,347 in 1914 and \$725,000 in 1917 was the superintendent of this pipe-manufacturing company, and the one who made \$8,523 in 1914 and \$715,372 in 1917 was treasurer of this same pipe-manufacturing company.

Mr. MADDEN. They got work for the cantonments, I suppose.

Mr. CARTER of Oklahoma. Has that company a secretary?

Mr. KITCHIN. That gentleman was secretary and treasurer.

Mr. RAKER. Has the gentleman any information about how these incomes of the various hotel men around the cantonments and around the Government works average, where they made \$6,000 and \$7,000 a year before and now in six months they have made enough to buy and own the building?

Mr. KITCHIN. In these cantonments, you mean?

Mr. RAKER. Yes.

Mr. KITCHIN. The cantonment contractors?

Mr. RAKER. The men running the hotels.

Mr. KITCHIN. No; we have not had time to go into an investigation of the hotel manager.

We intended to spend a week in especially going into the matter of the cantonment contract and the cost-plus contracts, but the Treasury Department, when we had about finished the bill, had so many suggestions, and some of them very wise and proper, that we did not get the week's time that we expected.

Mr. RAKER. Did you not go into the question of the hotel men either?

Mr. KITCHIN. No.

Mr. RAKER. Will you be able to get their increase under this bill?

Mr. KITCHIN. Yes; we will tax that.

Mr. STEPHENS of Nebraska. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. STEPHENS of Nebraska. Did you refer to pipe-manufacturing companies or pipe-line companies that are engaged in the transportation of oil?

Mr. KITCHIN. I refer to pipe-manufacturing companies.

Mr. MADDEN. Will the gentleman yield there?

Mr. KITCHIN. Yes.

Mr. MADDEN. I refer to the man who earned \$8,000 a year in 1914, the pipe manufacturer, and earned \$700,000 last year. He earned that because he was able to get a contract from the Government for putting pipe into the cantonments.

Mr. KITCHIN. Do you mean this pipe-manufacturing company?

Mr. MADDEN. Yes. He sold the pipe to the Government for constructing sewers.

Mr. KITCHIN. I have not the evidence, but I will make this guess: That all these individuals or corporations that are making the enormous increase in profits over what they were making before the war, or a large majority of them, have directly or indirectly a Government contract or a subcontract. We have some special provisions about that, gentlemen, that I

think will please the House and every honest man who wants to see justice done to the Government.

Mr. HARDY. That pipe business is largely the result of the increased artificial price that they put on the pipe they sell to oil men and things of that kind, an increase of 500 or 600 per cent in the last five years.

Mr. KNUTSON. Will the gentleman yield for a question?

Mr. KITCHIN. Yes.

Mr. KNUTSON. We have spent about 64 cents for every minute since the time of Christ on our aeroplane program. Has the gentleman information of the profits made on the aeroplane business?

Mr. KITCHIN. No; I have not.

Mr. KNUTSON. It would be very interesting if he had.

Mr. KITCHIN. You are a right interesting figurer if your figures are correct about the money we have spent since the days of Christ. I suggest to the gentleman, because he has all the sources of information that we have, that he can not spend his time better and more profitably to himself, to the House, and to the country from now on than to look into those propositions, and especially to go around and investigate just what he has suggested. I think it ought to be done. I am serious about it. The gentleman might get considerable information from the investigation of the aeroplane matter by the Senate committee. But our committee had so many subjects and items of taxation and so many suggestions about this kind of tax and that kind, about which we had to make some kind of investigation and render some decision that we could not go into the aeroplane matter.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GREEN of Iowa. It has been said, as the gentleman stated, that higher rates would be placed on big incomes, which the gentleman has been discussing. Will the gentleman state whether there is any other country that imposes quite as high rates as we propose in this bill?

Mr. KITCHIN. No other country in the world as to the higher brackets. Now, I am glad the gentleman called my attention to that. Great Britain levies higher income taxes than any other country except this. The rates in this bill upon incomes in excess of \$200,000 are considerably higher than the rates imposed in Great Britain. The rates levied in this bill are two and three and four times higher than those levied in France, according to the several brackets. I will give you some comparative figures, if you will permit me. Great Britain on \$200,000 levies \$99,000; we levy in this bill a little over \$100,000. On the \$300,000 income we levy in this proposed bill a tax of \$165,095; Great Britain, \$152,187.50. On a \$500,000 income we levy in this proposed bill \$297,095; Great Britain, \$257,187.50. On a \$1,000,000 income we propose to levy \$647,095; Great Britain levies \$519,687.50. On a \$5,000,000 income we propose to levy \$3,527,095; Great Britain levies \$2,619,687.50. On a \$5,000,000 income Canada levies \$3,415,157; France levies only \$623,772.50; while we levy, as I stated, \$3,527,095.

Now, in the smaller brackets, from \$2,500 up to \$6,000, Great Britain's tax is nearly six times more than ours. She hits the small fellow mighty hard. From \$7,000 up to \$12,500 Great Britain levies about three times as much as we levy in this proposed bill. From \$12,500 to \$30,000 Great Britain imposes just about twice as much as is levied in our proposed bill. From \$30,000 to \$50,000 Great Britain's levy is about 80 per cent higher than ours. From \$50,000 to \$70,000 Great Britain's levy is about 60 per cent higher than ours; and from \$70,000 to \$100,000 Great Britain's levy is about 30 per cent higher than ours.

Mr. HAMILTON of Michigan. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HAMILTON of Michigan. What is the explanation of Great Britain's moderation and mildness in imposing taxes on persons of very large income? Does the gentleman know?

Mr. KITCHIN. Great Britain is not so very mild, but a little milder than we.

Mr. HAMILTON of Michigan. She is levying very heavy taxes on intermediate incomes, as the gentleman states.

Mr. KITCHIN. Yes. On the \$500,000 income Great Britain levies a tax of \$257,187.50. She seems not to have as much concern for the fellow with a small income—for the masses of the people—respecting taxes, as we do, but more concern for the multimillionaires than we do.

Mr. HAMILTON of Michigan. And she moderates the tax when she gets into the high surtax region?

Mr. KITCHIN. Yes. We take comparatively a small per cent of the income on \$20,000 and under. In fact, her normal

tax is 30 per cent, against our 12, and she only allows a personal exemption of \$650.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONGWORTH. May I also suggest that one of the reasons why they keep the normal tax so high and the surtax so low is to make it easy to dispose of her bonds?

Mr. KITCHIN. The gentleman's suggestion may be true.

Mr. LONGWORTH. The bonds are not subject to normal tax?

Mr. KITCHIN. I understand that Great Britain issues some bonds subject to taxes, but with interest rate, and some tax exempt and with lower interest rate. All countries that issue a large amount of bonds must keep that in mind when they begin to levy surtaxes on incomes.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MADDEN. Has the gentleman taken into account the fact that in this country about 30 per cent of all the incomes are taken in taxation for city, county, and State, and that this 30 per cent is added to the tax levied now by the Government, whereas in England there is no such local tax?

Mr. KITCHIN. Yes; there are local taxes in Great Britain, but not nearly as high as our local county, State, and municipal taxes; but they still levy local taxes. But remember this, that the income tax or the excess-profits tax never touches any income or any excess profits until after all the taxes—State, county, city—and all expenses—salary, labor, material, amortization, depreciation, and depletion—are first charged off. No matter how much is paid to the State, it is deducted before these taxes apply.

Mr. KNUTSON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. KNUTSON. In making a comparison, is it not a fact that England taxes unearned increment?

Mr. KITCHIN. I do not know, but I do not think she does.

Now, I shall not have time to show all the other differences, but one important change from existing law that we made is that we have added to the income tax the salaries of all State, county, and municipal officials, and also the interest on State, county, and municipal bonds. I myself doubt the constitutionality of that proposition. But several members of the committee, fine lawyers, and several fine lawyers outside of the committee, held that now since the constitutional amendment reads so clearly, "income from whatever source derived," that is sufficient to cover salaries of State, municipal, and county officials, and it also is sufficient to catch interest on State bonds and county and municipal bonds.

As I said, I question the constitutionality of such a tax. But there being so much doubt about it, sooner or later that question must go to the Supreme Court, and the committee thought that the only way to get it to the Supreme Court is to put it in some bill, and that this was the proper bill and the time to put it in. While we believed that nobody during the war would test it, but would be glad to pay taxes on such salaries and on interest from municipal and State bonds, yet after the war no doubt the taxes are going to be very high anyway, and that question will be tested and settled.

I do not want to enter into a discussion of the subject, but I do not believe that Congress intended, in its submission to the States, or that the Supreme Court will say that Congress intended, or that the people in the States in ratifying it intended by the income-tax amendment to overturn that great principle that the courts have held for more than half of a century respecting the two distinct sovereignties of the State and the Federal Governments. The court before the amendment held that Congress could not tax State instrumentalities, such as salaries of State officers or State bonds, because, when that power is once conceded, the Federal Government could destroy the State governments by taxing their bonds and taxing their officers' salaries so high as to destroy State offices and State credit and all other State instrumentalities and agencies. On the other hand, it held that the States could not tax the salaries of Federal officials or the Federal Government bonds, because if they were permitted to do that the States could destroy by taxation the agencies and instrumentalities of the Federal Government. My personal view is the amendment never intended to destroy that principle or abrogate what the courts have held in that respect.

I think the fact that they used the words "without apportionment" in the amendment shows that they meant simply to remedy that which was found by the court's decision ought to be remedied; that is, before we passed this amendment Congress had power to tax incomes derived from certain sources; but in

order to do that, it had to apportion the tax between the States according to population, because the Supreme Court held that it was a direct tax. Now, when this constitutional amendment was ratified, that is what the Congress and the people in ratifying that amendment intended to remedy, to make it so that Congress could tax the incomes which it theretofore had the power to tax, without the necessity of apportionment. The amendment did not propose or intend to give to Congress power to tax incomes from additional sources which it theretofore had no power to tax. I think that is what the Supreme Court will hold, but it must be conceded that the language of the amendment creates enough doubt about it, and there always will be enough doubt about it, to justify the wisdom and propriety of raising the question in this bill, so that it can be tested and settled for all time. In the provision which taxes the interest from municipal and State bonds we exempt from tax the interest from the issues outstanding at the passage of this act, and the bonds that will be issued to fund or refund past indebtedness or to carry out contracts entered into before the passage of the act, or bonds issued for any purpose within six months after passage of the act under authority given before the passage of the act, but in the case of all new issues for new projects this taxing provision will have a tendency to keep them from competing too much with Government liberty bonds which we must from time to time put on the market for sale.

Mr. CANNON. Right on that point, does the bill make the distinction the gentleman speaks of, that it applies only to future obligations of States?

Mr. KITCHIN. Yes; future issues of States, counties, and municipalities.

Mr. CANNON. The bill does make that distinction?

Mr. KITCHIN. Yes. It does not apply to bonds now outstanding, or outstanding at the time of the passage of the act, nor to bonds issued to refund any interest-bearing obligation, or bonds issued that have been authorized by the State, county, or municipality issued within six months after the passage of the act, or bonds issued after the passage of the act to carry out any contract made before the passage of the act. I will say, too, that such State, county, or municipal bonds as are taxable in the bill are made subject only to the same taxes and have the same exemptions as Government liberty bonds.

Mr. HAMILTON of Michigan. Will the gentleman yield?

Mr. KITCHIN. I yield to the gentleman from Michigan.

Mr. HAMILTON of Michigan. I am not quite sure whether the gentleman has answered what I want to get at. How is the tax paid as to interest on the bonds of a municipality which are nontaxable under the law of the State?

Mr. KITCHIN. That would not affect it if they were issued under the circumstances described and after the passage of the act for new projects and did not come within the exception; that is, if our provision is constitutional. The interest from these State and municipal bonds, which are taxable, is not subject to the normal tax. We put the State and municipal bonds exactly on an equality with Government liberty bonds. We give them the \$5,000 exemption just as we have allowed it in the case of Government liberty bonds, and also the exemption from the normal tax the same as our Government obligations. We only make the interest from the taxable State and municipal bonds subject to the excess-profits and war-profits taxes and surtaxes the same as Government obligations.

Mr. CRISP. Will the gentleman yield?

Mr. KITCHIN. I yield to the gentleman from Georgia.

Mr. CRISP. The State has no right to tax Federal Government bonds in any way?

Mr. KITCHIN. Not unless Congress should give them the right in certain specific cases. I answer that question, no; and the State governments can not tax Federal official salaries, either.

Mr. STEVENSON. Does not your bill provide for the taxation of the incomes of the judges of the Supreme Court?

Mr. KITCHIN. Yes; I am coming to that now. Another important change or addition that we have made is this: In every income-tax law, in the income-tax laws of 1913, 1916, and 1917 the salaries of the President and of the justices of the Supreme Court and the other Federal courts were specifically exempted, during the term for which they were elected or appointed. Congress seems to have regarded by its revenue acts in the past that it is unconstitutional to tax or increase the tax on the salaries of the President or of the justices of the Supreme Court or the judges of the other Federal courts during their terms of office, on the ground that to do so would be a diminution, within the meaning of the Constitution, of their salaries during their terms of office. The Constitution specifically provides that neither the salary or "compensation" of the President nor of the Federal court judges shall be "dimin-

ished" during the term of office for which they were appointed or elected, and as to the President it provides that such salary or "compensation" shall not be increased during his term of office. As I said, it has been regarded by Congress in its practice that a tax upon such salaries is, in effect and under the spirit of the constitutional provision, a diminution of those salaries. Therefore, in all the income-tax acts, we exempted the salaries of the President during the term for which he was elected, and specifically exempted the Supreme Court and other judges during the terms of their appointment. Now, the committee, a large majority of them, doubted the soundness of that proposition, and they are firmly of the opinion that it is constitutional to tax the salaries of the President and of the Federal court judges, and that when the Constitution declared that these salaries should not be diminished or increased during their term of office, it certainly did not apply to the question of taxation. But it is a question of a great deal of doubt. It may be unconstitutional or may not be, but since this great doubt exists, the committee thought the best thing to do is to put the provision in the bill and to let it be tested.

Another thing. They felt, and I believe every man on the committee—I believe every fair-minded man in the House or out of the House—feels that if it is not unconstitutional, then no man, whether he be President, Chief Justice, or the judge of any court, should be exempt from taxation during this war, but that they all ought to contribute their part in dollars and cents to the prosecution of this war, as well as all others of our fellow citizens. [Applause.] No one doubts their perfect willingness to do so.

Mr. CANNON. I will ask the gentleman if it is not true that if you can tax the salaries of the President and the justices 10 per cent you can tax them 99 per cent; therefore destroy them?

Mr. KITCHIN. Yes; and that applies to the salary or income of every person, corporate or individual, in the United States. We can tax their incomes 10 per cent or 99 per cent. If the power to tax is the power to destroy, we can destroy all business, all industry, and the salaries and incomes of all individuals.

Mr. CANNON. If I recollect aright, during the Civil War the first tax bill put a stamp of 50 cents as a docket fee, and so on. It went to the Supreme Court upon the principle under the Constitution that the power of the Government to tax State machinery by which it existed was not well placed.

Mr. KITCHIN. That principle applies to the question as to whether we have the constitutional power to tax State officials or State bonds, or other State agencies, which I discussed a few moments ago. The Supreme Court held, and it has been followed, and nobody for 75 years has doubted it, until the income-tax amendment, that neither the State could tax the bonds of the Federal Government or the salaries of Federal officers, nor on the other hand could Congress tax the salaries of State officials or bonds of States, counties, or municipalities, not because there was anything in the Constitution expressly prohibiting or concerning it, for there is no provision in the Constitution upon which the court could base its decision like it could on the question of the President's or the judges' salaries, but it went on the fundamental, inherent principle of the dual system or form of government which we have—the State government and the Federal Government.

Mr. CRISP. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CRISP. What does the gentleman say as to the Federal Government taxing State bank notes?

Mr. KITCHIN. The Federal Government can tax a bank, for that is not a governmental function. While the Government uses it as an instrument, it is not necessary and is not an inherent function. If my State were to go into the farming business, and it has to some extent, the court would not hold that as one of the fundamental functions of the State government. If it should go into the business of manufacturing shoes, that would be a private function and not a governmental function. Such business could properly be taxed. Taxation of bank notes would be justified on the same ground.

Mr. STEVENSON. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. STEVENSON. The State of South Carolina went into the whisky business and the Federal Government made it pay a revenue tax the same as individuals, on the ground that it was not a State function.

Mr. KITCHIN. Yes; on the principle I have argued.

Mr. STEVENSON. I want to ask one more question. In framing the bill you have a provision for withholding the tax at the source. Suppose they provided for a tax to be withheld at the source on the salary of the judges. That would be a tax of \$700 or \$800. If the Treasury withholds it at the source, is

not that directly diminishing by that amount the salary of the judge and in violation of the Constitution?

Mr. KITCHIN. I do not think so, when the tax is placed on all alike—on all incomes alike. I do not think the constitutional provision prohibiting the diminishing of the President's or judges' salary has any application to the question of taxation. There is a difference between the diminution of the President's and the judges' salary and the taxation of State bonds, State salaries, and other State agencies. One is based on the constitutional provision, subject to different constructions, and the other on the fundamental principles of our dual system of government. I was not in favor of putting this provision in the bill, but it was put in and I am now inclined to think that it was wise and proper. In my opinion the constitutional provision that the compensation of the judges and the President shall not be diminished during the terms of office to which elected or appointed has no reference or application to a tax and did not intend to exempt such compensations or salaries from payment of tax to help support the Government, while compensations or salaries of all other citizens could be taxed.

The provision means what its plain, ordinary language can only imply. It was intended by such provision to prevent Congress, when of a hostile party, from punishing the President by reducing his salary as such or, when a friendly party, to favor him by increasing his salary during his term of office, or from punishing judges for some decision rendered by reducing their salaries. But when the incomes of the President and judges derived from their salaries are taxed just like similar amounts of incomes, from salaries or otherwise, of all other citizens and residents, it seems to be a far stretch to construe such a tax as a diminution of such salaries, in the sense used in the constitutional provision. We recall the mandate is against increasing as well as diminishing the salary of the President during the period for which he is elected. It reads:

The President shall at stated times receive for his services a compensation which shall neither be increased nor diminished during the period for which he shall have been elected.

If putting on or increasing a tax on his salary is a diminution of his salary under the term of the Constitution, then a repeal or reduction of a tax existing at the time his term begins is an increase in such salary, within the meaning of the Constitution. Suppose this bill, with its high rates, becomes a law and is in effect at the time the next presidential term begins. All concede the tax would be applicable to the salary of the President during that term. Now, suppose one month after the term begins, the Government not needing the money, Congress repeals the tax. This would be an increase in the salary under the terms of the constitutional provision if adding a tax is a diminution of the salary, and we would have the anomalous and ridiculous spectacle of the repeal being constitutional as to every other American citizen except as to the President, and for four years he would have to pay an income tax on his salary of \$25,000 annually, while nobody else in the United States would have to pay a cent of tax on his salary or income, however big or little.

The Supreme Court has never held that such a tax or any tax was a diminution of the salary within the meaning of that provision. A case never went to the Supreme Court. I will tell you how that idea crept into the judicial thought of the country: It was an opinion rendered by Judge Hoar, Attorney General in Grant's administration. A tax was levied on judges' salaries. Judge Hoar, as Attorney General, gave it as his opinion that to tax a judge's salary while in office was a diminution under the spirit of that provision to which we have referred. In accordance with that opinion of Judge Hoar, the Treasury Department and Congress have ever since acted.

Mr. BORLAND. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BORLAND. Was not that opinion of Judge Hoar's based on an opinion by the judges to the Attorney General?

Mr. KITCHIN. I do not recall.

Mr. BORLAND. My recollection is that the judges joined in a memorial to the Attorney General, and he adopted it.

Mr. KITCHIN. From what I have read I do not have that recollection of the question.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HARDY. Would it not be the fact that every judge in the United States would be disqualified from passing upon the question of whether that law is constitutional because of self-interest? [Laughter.]

Mr. KITCHIN. Possibly so, but that is no reason why it should not go into the bill.

Mr. ROSE. Under the act of 1917 the Members of Congress were charged pretty generally over the country with undertaking to evade the tax on their own salaries.

Mr. KITCHIN. Yes.

Mr. ROSE. I have not been able to read this entire bill, but I would like to know if there is any possibility of raising such a question again?

Mr. KITCHIN. Not a bit. Every Member of Congress is going to pay two or three times what he paid before and exactly the same tax as any other individual having the same income.

Mr. ROSE. That is right, but I wanted to make it so clear that there will be no question about it.

Mr. KITCHIN. There will be no question. There was no such exemption from tax last year, either in the income or excess-profits tax provisions. It was the press of the country that persisted in misrepresenting Congress and its Members. It was not true.

Mr. ROSE. That is correct, but we were charged with it.

Mr. CANNON. Would not our anxiety in respect to that depend somewhat upon the time the bill is passed? If the bill is passed before the elections, it is all right, but after the elections will we be so anxious? [Laughter.]

Mr. KITCHIN. Possibly the gentleman is right.

Mr. PLATT. Mr. Chairman, the gentleman would not contend that the tax of \$470 upon the salary of a Congressman of \$7,500 does not diminish that salary, would he? A Member of Congress, after his tax is paid, will receive \$7,030 instead of \$7,500, will he not?

Mr. KITCHIN. The gentleman receives a salary of \$7,500, and he will pay a tax of \$470 under this bill on that salary.

Mr. PLATT. What I want to know is this: That being the case, why should he pay a tax on \$7,500 when he really receives only \$7,030. He ought to pay a tax on his net income.

Mr. KITCHIN. Suppose I receive an income of \$1,000 and am going to pay a tax of 10 per cent on it, which is \$100. Does the gentleman think that I ought to be taxed on \$900?

Mr. PLATT. I think you should be taxed upon your net income, not on what you have not got.

Mr. KITCHIN. It is the net income before you pay your tax, of course, and the tax is on the net income.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MADDEN. It has been the practice to permit the deduction of taxes paid on this year's income from next year's income.

Mr. KITCHIN. Not under the present law. You do not deduct your income tax.

Mr. MADDEN. Has not that been the practice?

Mr. KITCHIN. It was when the tax was small, in 1913 and 1914 and in 1915, under the act of 1913.

Mr. MADDEN. This bill does not provide that?

Mr. KITCHIN. You can not deduct the income tax paid from the net income under this proposed bill or under the present act, but a corporation can deduct from its net income the amount it pays in the current year or is to pay in the current year as excess-profits tax. For instance, if the total income is \$100,000 and the corporation pays an excess-profits tax of \$20,000, then for the purpose of the income tax it would deduct \$20,000 for the \$100,000 and pay on \$80,000.

Mr. MADDEN. Does not that also apply to the individual as well?

Mr. KITCHIN. No. The individual can not, as under the acts of 1913 and 1916, deduct his income tax he pays from his income. When we reach the excess-profits tax I will show the gentleman that in this bill we exclude the individual and partnership from the excess-profits tax and will give the gentlemen in the House the reasons for it.

Mr. MADDEN. If, for example, a corporation is permitted to deduct the amount of the tax that it pays from next year's income, is there any good reason why the individual should not be permitted the same privilege? That is the point.

Mr. KITCHIN. If a corporation deducts from its net income—no; neither has the right to deduct the income tax paid.

Mr. MADDEN. What right have they got?

Mr. KITCHIN. The gentleman means as to taxation?

Mr. MADDEN. As to deduction.

Mr. KITCHIN. We do not allow the deduction of income taxes paid. If we did, the large incomes would escape a lot of taxes. For instance, take our friend, Wanamaker. Say he receives \$1,000,000 a year. His income tax under this is going to be something like \$647,000, I believe.

Mr. MADDEN. Leaving \$353,000.

Mr. KITCHIN. If the next year, after he pays this tax, he makes \$1,000,000, and if he could deduct \$647,000 taxes from it, we would only get a tax on an income of \$353,000, which would only amount to about \$180,000, leaving him \$820,000. Here is the theory of an income tax—that the Government will get a certain part of the income made every year. If one makes \$1,000,000, we want to get \$647,000, and if he makes \$1,000,000

next year we want to get the same amount. If he makes the same amount of money, we are going to leave the taxpayer the same income next year that we leave him this year. Otherwise, in the case of the \$1,000,000, we only get the tax on \$353,000 the following year.

Mr. MADDEN. I would like the gentleman to explain.

For example, if a man makes \$1,000,000 and pays \$647,000 and has \$353,000 left, and he is not allowed to make any reduction from his next year's income for the tax he paid this year, why is the corporation which makes \$10,000,000 excess-profits tax, on which it pays the excess-profits rate, permitted to deduct the amount figuring at that rate from its next year's excess profits?

Mr. KITCHIN. Not from next year's. There is an income tax of the current year. Let me illustrate again. Here is a corporation that makes for a certain year, 1918, \$100,000. The Government wants an income tax and an excess-profits tax. Suppose in making the return the taxpayer finds that the excess-profits tax is going to be \$25,000. In determining the net income for the purpose of applying the corporation income tax it can deduct \$25,000 from the \$100,000 as excess-profits tax to be paid that year, so its income tax will be computed upon \$75,000 instead of \$100,000.

Mr. MADDEN. For instance, allow me to go a little further in this thing for just a moment.

Mr. KITCHIN. All right.

Mr. MADDEN. Now, he is taxed on \$75,000 next year instead of \$100,000, because he is permitted to deduct \$25,000?

Mr. KITCHIN. No; the deduction is for the current year. There is nothing to deduct next year.

Mr. MADDEN. It does not make any difference when he deducts, as long as he deducts. Now, the individual may not make any more one year than he makes the other year, and yet he is not permitted to deduct anything.

Mr. KITCHIN. No; the individual and the partnership under this proposed bill are not permitted to deduct what they pay on their income tax nor is the corporation under this bill or under existing law entitled to deduct anything it pays for income tax. The individual and partnership does not deduct under this bill any excess-profits tax because they are not subject to the excess-profits tax.

Mr. MADDEN. What is the excess-profits tax if it is not an income tax?

Mr. LONGWORTH. If the gentleman will pardon me, I think the gentleman from Illinois misunderstands the excess-profits tax in this case, because the individual pays no excess-profits tax.

Mr. KITCHIN. The excess-profits tax will not apply to the individual or the partnership, as I have already explained.

Mr. HARDY. Will the gentleman yield? Is it not the simple proposition that the income tax is upon the net income after taking out everything else that is paid in the way of taxation? In other words, that is the last tax.

Mr. KITCHIN. Yes. He deducts from his gross income all State, county, city, and other local taxes.

Mr. HARDY. The net-income tax is the last tax that is paid by a man and applies to the income that is left after paying everything else.

Mr. KITCHIN. In other words, the Government wants to get each year a certain part of the net income, and, as I illustrated in the case of Wanamaker, the first year we would get \$647,000 if he made \$1,000,000. The next year, say, he makes the same \$1,000,000.

Now, if he could deduct the \$647,000, the Government, instead of getting \$647,000 would get about \$180,000, and Wanamaker, instead of paying the Government \$647,000 and having for himself \$353,000, would have over \$800,000 left for himself of his million dollars.

Mr. PLATT. Right in that connection, suppose a State levies an income tax, is that a deduction or is it not?

Mr. KITCHIN. I would like the gentleman from New York [Mr. PLATT] to understand that this income tax does not apply to the income until all expenses, overhead charges, salaries, insurance, and all State, county, and municipal taxes are deducted. All of these items are allowed as a deduction in determining net income.

Mr. PLATT. In paragraph 3 of section 214, it seems to me it does not distinctly exclude—

Mr. KITCHIN. Read paragraph 3 and see if it does not. Read the whole of it. You have just read paragraphs (a) and (b). Read (c) and see how plain it is. It says:

Or by the authority of any State or Territory, or any county, school district, municipality, or other taxing subdivision of any State or Territory.

Mr. PLATT. It says:

Taxes paid or accrued within the taxable year imposed (a) by the authority of the United States, except income, war-profits, and excess-profits taxes; or (b) by the authority of any of its possessions, except the amount of income, war-profits, and excess-profits taxes allowed as a credit under section 222; or (c) by the authority of any State, Territory—

And so forth.

Mr. KITCHIN. Now you get it. And further— or (d) in case of a citizen or resident of the United States, by the authority of any foreign country, except the amount of income, war-profits, and excess-profits taxes allowed as a credit under section 222.

Now, get your section 222 and see how plain it is.

Mr. PLATT. In other words, the State comes under subdivision (c)?

Mr. SMITH of Michigan. Are taxes for local improvements deducted?

Mr. KITCHIN. No; you can not deduct those if they are for local benefit.

Mr. SMITH of Michigan. The construction of a street in front of your residence, or a sidewalk, would be an example of a tax assessed against local benefits?

Mr. KITCHIN. That is right.

Mr. BORLAND. I wanted to ask a question about the taxing of American citizens abroad.

As I read the bill, they are entitled to an exemption if they pay taxes to a foreign Government upon an income which is earned in a foreign country?

Mr. KITCHIN. Yes.

Mr. BORLAND. Now, suppose that an American citizen abroad is in the employ of an American corporation. Suppose he is the manager of a packing company or the Standard Oil Co. in the country in which he resides, and he is paid a salary by that corporation of, say, \$50,000, is that an income supposed to be earned in Canada, or in Argentina?

Mr. KITCHIN. You place this man in Canada now?

Mr. BORLAND. Yes.

Mr. KITCHIN. He is an American citizen and getting \$50,000 as superintendent, say, of the Swift Packing Co., in Canada. Canada now taxes him an income tax on that \$50,000 and we tax him on that, too. Under existing law he pays a double tax, a tax to the United States Government—that will be exceedingly high under this bill—and a tax to the Canadian Government on the same \$50,000. Now, we provide that he, in making his return here, can deduct from his tax levied here the amount of taxes he pays in Canada on account of the \$50,000. In other words, if he has paid Canada \$10,000 in taxes and his tax here would be \$25,000 on the same income, he can have a credit on that tax of \$10,000, the amount he paid on his income to the Canadian Government.

Mr. BORLAND. Is his income paid by Swift & Co. in Chicago an income earned in Canada or in the United States?

Mr. KITCHIN. In Canada, because he is a resident there and does the work there.

Mr. BORLAND. The bill says—

Mr. KITCHIN. The bill says exactly what I explained. Suppose we had a meat company over in Montreal and they would send to St. Louis a Canadian citizen from Montreal and pay him \$50,000 a year; this Government would tax him on \$50,000, although he would be a British subject—a Canadian citizen. Canada would tax him, also. Canada, no doubt, will do as we are doing by this bill—pass a law that will permit its citizen earning an income here to deduct from his tax levied by her the amount of tax paid by him to the United States. That is not only a just provision, but a very wise one. It is wise from the standpoint of the commerce of the United States, of the expansion of business of the United States. There are thousands of citizens of the United States now going to South America, and they have been going for years, and we have thousands of citizens in Canada. We would discourage men from going out after commerce and business in different countries or residing for such purposes in different countries if we maintained this double taxation. They would take their corporations that are American corporations and reorganize them, getting their charters in such foreign countries, if we did not do this, and we might not be able to tax their income and profits at all. Another thing: If we did not do that, a man would become a citizen of another country instead of retaining his citizenship here in order to escape the large and double taxation imposed.

Mr. BORLAND. Does that give any advantage to the American citizen abroad who draws his income, we will say, from American investments? Suppose a man lives in London and draws his income from American investments and is taxed in London?

Mr. KITCHIN. Under the bill he can not escape our tax. He is taxed here and in London also. It must be earned in the

foreign country in which he resides before any credit can be allowed.

Mr. BORLAND. That would mean that it must be the fruit of the investments in that foreign country?

Mr. KITCHIN. A gentleman who has lived for years in Great Britain, like, say, one of the Astor family, with all his income from American investments, will pay both here and in Great Britain.

Mr. BORLAND. He will pay here, too?

Mr. KITCHIN. Yes.

Mr. MADDEN. Using the illustration the gentleman made a moment ago, that Canada would levy a tax of \$10,000 on the \$50,000 income of an American citizen residing in Canada, while the United States would levy a tax of \$25,000 on the same individual and we would permit the \$10,000 paid by him in Canada to be deducted from the \$25,000 he would have to pay here, and leave him only \$15,000 to pay—

Mr. KITCHIN. Yes—

Mr. MADDEN. Suppose the Canadian citizen happened to live in St. Louis, as the gentleman suggested, and we levied a tax of \$25,000 on his income of \$50,000, and Canada levied a tax of \$10,000 on the same income, and the same rule were applied, would Canada owe him \$15,000? [Laughter.]

Mr. KITCHIN. In such case we would get our tax; Canada would have to look out for its own citizens. So with a British subject from England who resides here. We would get the tax on his income earned here, and so would Great Britain, and it would be up to Great Britain to allow him credit for what he pays to our Government.

Another thing that I want to call attention to is the fact that the bill also excludes from gross income amounts not in excess of \$3,500 received by persons in the military or naval forces of the United States as salary or compensation in any form for services rendered abroad or at sea in such forces.

Mr. MADDEN. They are relieved from taxation?

Mr. KITCHIN. The soldiers and sailors that are either abroad or on the high seas have an additional exemption of \$3,500 with respect to their salary or compensation or income received from the Government. It does not apply to any of these home officers—the soldiers or sailors on shore duty here. They must actually serve abroad or on the seas to get the benefit of this exemption. That is, they can have as much of their salary from the Government exempted as \$3,500. If one gets \$3,000, he is exempted \$3,000. If he receives \$5,000 for services abroad, he can only have \$3,500 exempted.

Mr. WELTY. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. WELTY. Would that be in addition to the \$2,000, if he were married?

Mr. KITCHIN. Yes; it works out that way. The amount he receives for services abroad to the extent of \$3,500 is not included in his gross income. You do not include that, as you do other items of income.

Mr. ROBBINS. He will really pay no taxes until he reached \$5,500?

Mr. KITCHIN. Yes. That \$3,500 is excluded from gross income. It is not counted at all.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. SMITH of Michigan. Under this bill it is necessary for every man to make a return, is it not? Or can he say, "My income is not sufficient to warrant my making a return"?

Mr. KITCHIN. He must make a return, if he is a married man and has an income of \$2,000, or if he is a single man and has an income of \$1,000.

Mr. LITTLE. Suppose he received only \$900?

Mr. KITCHIN. He would make no return. It would not pay the Government to require returns of amounts under \$1,000. We have a provision in the bill that requires the collector of each internal revenue district to keep an alphabetical list, open to inspection, showing the name and post-office address of every man who pays an income tax. We think that is going to help collect a large amount of taxes.

Mr. SMITH of Michigan. It is not mandatory, is it?

Mr. KITCHIN. Yes. If Bill Jones looks over this book and finds that he is paying an income tax and that names of Tom Smith and Dick Brown and his other competitors are not there, he will say to the collector, "Check up those boys; they have taxable incomes; they ought to pay taxes, too." It is going to help.

It is estimated by the experts that we will collect under the bill from the personal or individual income tax for the calendar year 1918, \$1,482,180,000, while for the calendar year 1917, under existing law, we will collect \$930,000,000. I believe I have ex-

plained the income tax, especially the essential features and changes from existing law. There is one other matter which I was about to overlook that is very important to business men that we have changed in this bill. Under the present act a loss to the taxpayer can only be deducted if it is connected with the transactions of the business, while a casual loss on the outside can not be deducted. To illustrate, suppose I am a player of the stock market, and that is my business. Suppose I lose \$50,000. I can deduct that from my total year's earnings. Say my total income is \$100,000, and that I lose \$50,000. I can deduct that because that is my business, and pay tax on \$50,000; but if I am a merchant, a farmer, or a lawyer, and happen to see something in the paper which makes me think I can make a big sum of money, and then I go out and buy a future contract, and make a loss of \$10,000, I can not deduct that from my income under the existing law or under the act of 1913. Suppose in my business as merchant, lawyer, or farmer I made \$10,000. I would have to pay an income tax on that whole \$10,000, although I had lost \$10,000 in three days on a little side stock-exchange gamble that I had made. Now, this bill permits all taxpayers to deduct their losses that are made in their business or outside of their business during the year. If I make \$10,000 in the practice of the law and lose \$10,000 on the stock market I can deduct it, because in the case I have supposed I would have no income left.

Mr. GRAHAM of Illinois. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GRAHAM of Illinois. How about losses caused by indorsements on accommodation paper? That is, where one signs as security for another and makes a loss in that way, does the bill take care of that, so that such a loss can be deducted?

Mr. KITCHIN. If he charges it off and does not hold the other man responsible for it, it can be deducted.

Gentlemen, I have so far attempted to give you a general view of the principal features and policies of the bill, and to discuss in detail the chief provisions respecting the personal or individual income tax. We now come to the corporation income-tax provisions. Since I have been on my feet about four and a half hours, and knowing that your patience is exhausted, I will close now, and, with the permission of the committee and the House, resume to-morrow the detailed discussion or explanation of the other titles and provisions of the bill.

Saturday, September 7, 1918.

CORPORATION INCOME TAX.

Mr. KITCHIN. Mr. Chairman, yesterday in the discussion of the bill we reached the corporation income tax, and now I desire to call the attention of the House to some of the provisions respecting that tax. Under the existing law the normal tax or the tax on corporation incomes is 6 per cent. The committee has raised that to 18 per cent, which is just a little over half of the corporate tax in Great Britain. Her tax is 30 per cent upon the total net income. However, we have a proviso that the tax shall only be 12 per cent on the amount paid in dividends, and on the amount paid in the discharge of interest-bearing obligations outstanding before the taxable year. The committee is considering, and will probably offer, an amendment adding to the 12 per cent class the amount of earnings or incomes invested in liberty bonds. The committee thought that this rate was necessary in order to get the necessary revenue. We felt it was not too hard upon the corporations, and that, if Great Britain could tax corporations 30 per cent without any apparent crippling of the industries, this country could afford for the purpose of getting the required revenue to tax corporate incomes 18 per cent, with the proviso to which I have just referred. This rebate of 6 per cent or reduction to 12 per cent on dividends will have a tendency to stimulate the corporations to distribute the dividends—first, for the benefit of the small stockholders throughout the United States, and, second, in order that the Government may get the benefit of the individual surtaxes upon the distributed income. If, however, the corporation desires not to distribute, but to carry all its earnings to surplus, then it must pay 18 per cent on its entire net income for the taxable year. Under the existing law the rate is, as I have stated, 6 per cent, but if the Secretary of the Treasury finds that the amount carried to surplus is not necessary to meet the requirements of the business, or is not employed actually in the transaction of the business of the corporation, then there is an addition of 15 per cent. Under the present law this provision is very hard to administer. In fact, there has not been a case to which the 15 per cent has been applied, because it is so easy for a corporation to bring proof that every dollar that it does not distribute is actually necessary for or is employed in the conduct of its business, and it is almost impossible for the officials of the Treasury Depart-

ment to dispute the proposition or bring proof to the contrary. We think that this new provision is a very wholesome and necessary one.

With the rates of the surtaxes on incomes of individuals as high in the bill as they necessarily must be, and dividends being subject to surtaxes, unless there be a reasonably high rate on corporate incomes, with a rebate on the portion distributed, corporations, especially the large close corporations, will carry to surplus as much as possible and distribute in dividends as little as possible to prevent the stockholders from paying surtaxes on the dividends. By so doing the Government stands to lose some hundreds of millions of dollars. If the corporate income rate is high the tendency to carry to surplus will not be so great, but if they do not distribute the amount the Government loss in surtaxes would, to some extent, be made up in the high corporate income rate.

Under the present law corporations can deduct interest only to the amount of the capital stock paid in and one-half of the interest-bearing indebtedness. We change this so as to give the corporation the right to deduct all interest it pays in excess of tax-free interest received—that is, interest on tax-free securities. Under the present law corporations must pay 2 per cent upon the dividends received from other corporations. In view of the increase in the corporate tax rates we repeal the tax on dividends received from other corporations, and under this bill corporations will pay no tax upon such dividends—that is, such dividends will not be included in the net income. In order to take care of the smaller corporations we also allow a specific exemption of \$2,000 to all corporations. We bring forward in this bill the provision in existing law that corporations can deduct from their net income the amount of excess-profits tax which they pay. The proposed bill will collect from corporations, according to the expert estimates, \$3,200,000,000 in excess-profits taxes for the calendar year 1918. They deduct, then, of course, \$3,200,000,000 from their total net income before the income tax applies. Yesterday I gave some figures to the House as to the increase in the corporate incomes since 1914, the outbreak of the war, and I am going to repeat again to-day before I conclude, so that we can get fully into our minds the fact that the rates imposed are not so hard on corporations as at first glance it would seem. We are by no means confiscating.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONGWORTH. I have read in a number of newspapers lately that there is a very violent divergence of opinion between the Treasury Department and the committee. According to my understanding the facts are that the only divergence of opinion in any respect between the Secretary of the Treasury and the committee is with regard to this differential in favor of distributed income and upon the question of whether there should be any increase in the excess-profits tax. Can the gentleman state whether there is any other difference?

Mr. KITCHIN. I would say to the gentleman that I have seen within the last three or four weeks at least a hundred editorials in the metropolitan press of the country to the effect that there have been great conflicts and contests between the Secretary of the Treasury and the Committee on Ways and Means. We have had several of these editorials before us, and of course every man on the committee knows that there has not been one in which there is not an apparent and deliberate misrepresentation of the committee and apparently a deliberate design to deceive the public. As the gentleman from Ohio says, and as I understand the matter, this bill is satisfactory to the Secretary of the Treasury and to the Treasury officials on the whole, and the real difference between the views of the Secretary of the Treasury and some other Treasury officials and the committee is upon the two items mentioned by the gentleman from Ohio.

The Secretary of the Treasury believes, and so do other officials of the Treasury Department, that there should not be this differential of 18 and 12 per cent in the corporation income tax. He and the officials of the Treasury Department believe also that the excess-profits tax rates should remain the same as under the present law. They are the only differences, but instead of being contested, conflicting, stubborn, fighting differences, as the press would have the public believe, they are simply differences in opinion, which were discussed by them and the committee in the most pleasant and cordial way.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. MOORE of Pennsylvania. So long as the gentleman from Ohio has raised this question and has given the gentleman from North Carolina an opportunity to make that statement, would it not be fair in the interest of history, since

this is the greatest bill of record, to say that numerous suggestions were received from the Treasury Department concerning all of which the committee did not agree with the Treasury Department?

Mr. KITCHIN. That is true.

Mr. MOORE of Pennsylvania. And there were a great many points of difference which were necessarily ironed out, and which to a certain extent delayed the report of the committee because those differences existed.

Mr. KITCHIN. I would say the committee would have had the bill ready by the 19th but for the delay in considering the many suggestions with respect to the administrative features and with respect to some real essential features of the bill from the Treasury Department. I would say while there was a difference of opinion on a great many propositions we thrashed them out pro and con, and finally the department and the committee came to a satisfactory conclusion practically on all propositions except the two mentioned by the gentleman from Ohio.

Mr. MOORE of Pennsylvania. I think it is fair to the gentleman to say, if he will permit me in his time, that the committee on several occasions was in disagreement with the Treasury Department and that on many occasions there were deliberations by the committee which indicated that the committee understood its prerogatives as the representatives and as the spokesmen of the people in the House of Representatives.

Mr. KITCHIN. That is true. I think I can say, too, that on at least as many propositions the Secretary of the Treasury or other officials agreed with the committee finally as the committee agreed with the suggestions of the Secretary of the Treasury and other officials. I think on some they recognized that their suggestions, after discussing the matter pro and con, were really not the wisest ones.

Mr. MOORE of Pennsylvania. It is fair to say, I think, too, that some disputed points have been waived?

Mr. KITCHIN. Yes, sir.

Mr. LONGWORTH. If the gentleman will pardon me, my question only involved the bill as finally agreed upon. It did not involve at all the question as to suggestions.

Mr. KITCHIN. The essential differences as they appear in the bill are as the gentleman from Ohio says.

Mr. SLOAN. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. SLOAN. As this committee has the duty and jurisdiction to frame such a bill as this under the Constitution, is it not entirely irrelevant and immaterial whether the Treasury Department approves of this bill or any other measure or whether it does not? I do not know of any particular constitutional function that the Treasury Department or any other departmental division of this Government has to be placed upon the dignity of disagreeing with this committee or this House in a performance of a function constitutionally delegated to the House and no one else.

Mr. KITCHIN. If the gentleman means that the Constitution confers original jurisdiction upon the House to originate revenue measures, and that under the rules of the House that duty and responsibility in the first instance are transferred to the Ways and Means Committee and it has the right, without let or hindrance from a department or other source, to write just such a bill as in its judgment is right and proper, yes.

But that does not exclude the right and the privilege and the courtesy of the Ways and Means Committee considering and adopting suggestions, if it thinks them wise and proper, from the administration, from the Secretary of the Treasury, or any other official in the Treasury, or from any source inside or outside the administration or the Treasury Department. And I will say to the gentleman and to the House that this bill is essentially the result of the labor and effort and study of the committee, in cooperation with the Secretary of the Treasury and other officials of the department, including the members of the Excess-Profits Tax Advisory Board and other parties who desired to suggest anything to us or desired to help. I believe that no bill of this kind—this magnitude and importance—can, as to every item in the bill, be in exact accordance with the view of each and every official of a department or of each and every member of the committee, especially when composed of 23 members. In other words, if this House had authorized any one man or each of the 435 Members to go out and write a bill collecting \$8,000,000,000 from incomes, from profits, from luxuries, and semiluxuries, not one would have every item and every provision just as we have them in this bill. But, on the other hand, I believe if you had commissioned any 23 men from the 435 Members of the House to write a bill that would raise \$8,000,000,000 and given them three or four months, as we have had, to investigate and carry their researches into every nook and corner of the revenue field, they would have presented

you a bill not essentially different from this. The 23 might have had rates a little different, might have included subjects of taxation which we have left out, might have omitted some which we have in, but I believe, on the whole, they would write just about such a bill as this.

Mr. LONGWORTH. Although this bill raises the tremendous amount of revenue of \$8,000,000,000, that is only a small portion relative of the amount that must be raised to carry on this war?

Mr. KITCHIN. That is true.

Mr. LONGWORTH. Is it any derogation of the dignity of the House or the dignity of the Ways and Means Committee to consult the Treasury Department as to what effect this legislation may have on coming issues of Liberty Bonds? [Applause.]

Mr. KITCHIN. I should think it very essential in drawing a bill to raise such an enormous amount of taxes that the committee should and ought to consult and confer with the Secretary of the Treasury and those responsible to the people and the Government for selling the stupendous amount of bonds that we must sell before July 1, 1919. It seems we will have to sell no less than \$16,000,000,000 more of bonds by then, and there ought to be some kind of harmonious cooperation between the Treasury Department and the Secretary of the Treasury and the Ways and Means Committee and both Houses of Congress. Further, I think the committee would stand upon their rights and, of course, upon their best judgment if there should be a real essential matter, of difference, although the Secretary of the Treasury and the department might not agree with us. Take one of the two items to which the gentleman from Ohio called attention—the excess-profits tax. The Secretary of the Treasury thinks the excess-profits tax rates should not be increased.

The committee was unanimous in the opinion, after investigating the subject thoroughly, that the Treasury Department was mistaken and that the only right, wise, just, and fair thing to do was to increase those rates. Otherwise, if the rates remained as they now are it would be a guaranty that in raising this \$8,000,000,000 and increasing taxation generally 100 per cent, at least 10 per cent of the corporations of the country, and included in that 10 per cent some of the largest and most successful and prosperous corporations, should not have their profit taxes increased a penny to help raise that \$8,000,000,000, while, on the other hand, the remaining 90 per cent of the corporations of this country should be forced to have their profit taxes increased from 50 to, in some cases, over 300 per cent. The committee could not take the suggestions of the department under those circumstances.

I feel confident that there is not a man in this House who, if he sits down and carefully investigates the matter and considers the reasons and arguments on both sides, will not agree that this committee was right in rejecting the proposition of the Treasury Department that there should be no increase in the excess-profits tax rates and in making a material increase in such rates. I shall refer to that when I get to the excess and war profits tax proposition.

As to the other question, the differential of 18 and 12 per cent in the corporate-income tax, I think there is reasonable grounds for a difference. I think that that is a matter which the committee and the House ought to feel they are just as qualified to pass upon as any man connected with the administration.

As to the corporation 12 per cent and 18 per cent income-tax rate, that is not a matter of right or justice on the one side and inequity and inequality upon the other, as there would be no inequity and no injustice done if either view was adopted; but it is a question of wisdom, of policy, and expediency, and the effect of the rates on the amount of taxes to be collected and on the purchase of liberty bonds. As I said, there well might be a ground for a difference of opinion. But our judgment—and it was unanimous in committee, with one exception, I believe—was that the 18 per cent rate was not too high, and that the differential in the corporation tax is the wiser and the better course than that which the Treasury Department suggested we should take, which was a flat 12 per cent rate.

Mr. OSBORNE. Mr. Chairman, the question I was about to propound to the distinguished chairman of the Committee on Ways and Means he has in part anticipated. What I desired was that he should enlighten the House as to those two differences in concrete shape. I think it would be illuminating to the House if he were to explain that matter.

Mr. KITCHIN. I have explained the difference in the corporation tax. As I said, this committee, after full investigation, thought the wisest thing to do, the best and the just thing for stockholders in corporations generally throughout the United States, and the best thing for the revenue of the Government, was that we should levy a tax of 18 per cent, which, as I said

a while ago, is a little over half of the tax levied by Great Britain, and we should give a rebate of 6 per cent; that is, reduce the tax to 12 per cent upon the amount of such earnings in the taxable year as are distributed to stockholders, and upon the amount the corporation uses in discharge of interest-bearing obligations or bonded indebtedness of the corporation outstanding at the beginning of the taxable year. The Treasury Department thought it was wiser and better to have a 12 per cent flat rate than any differential.

We took the position that if you had a 12 per cent flat rate, we would lose not \$100,000,000 but certainly a few hundred million dollars of taxes when the Government is in such dire and urgent need of every dollar of them, for the reason that if you levy a flat rate of 12 per cent thousands and thousands of corporations would not distribute any dividends to their stockholders, in order to save the large stockholders from the payment of the individual surtax rate. The surtax upon the incomes from \$30,000 and up would range from 20 to 65 per cent, and larger stockholders could well afford to have the earnings remain in the surplus and pay the 12 per cent rather than to have them distributed and pay the high surtaxes. But it was our opinion that if the rate was made 18 per cent, that there would be less inducement for the corporation to add all or most of its earnings to surplus and not to distribute them. That is the reason we made this differential.

Mr. STEPHENS of Nebraska. There are numerous small corporations that owe sometimes more than their capital stock. Suppose a \$50,000 corporation earns 10 per cent or 15 per cent, and that it owes \$100,000, and it applies this earning upon the debt, does it still have to pay the 12 per cent rate?

Mr. KITCHIN. If it was a debt outstanding before the taxable year, whatever amount it discharges of that debt it will only be subject to the 12 per cent instead of the 18 per cent rate.

Mr. STEPHENS of Nebraska. Then, you would really, in fact, be collecting a tax on a debt from a company that was really bankrupt?

Mr. KITCHIN. Oh, no; because that amount would be the earnings of the year, and it made that much profit the taxable year, whether it paid off a past indebtedness or distributed to stockholders.

Mr. CARTER of Oklahoma. The interest is deducted?

Mr. KITCHIN. Yes.

Mr. STEPHENS of Nebraska. But there are numerous corporations that are in fact bankrupt and merely sustained by their credit.

Mr. KITCHIN. If such a bankrupt corporation, with \$100,000 capital invested, makes \$50,000 net profit the taxable year, and if it pays \$25,000 in discharge of bonds and pays \$25,000 to stockholders, its earnings would only be subject to the 12 per cent rate.

Mr. STEPHENS of Nebraska. On the whole earnings?

Mr. KITCHIN. Twelve per cent on the amount of earnings it distributes to stockholders and pays in the discharge of indebtedness. If it disposes of all its earnings that way it would pay 12 per cent on all its earnings.

Mr. STEPHENS of Nebraska. Would it pay 12 per cent on the earnings applied on its debt also?

Mr. KITCHIN. Yes; its debt outstanding at beginning of the taxable year. The debt incurred in its business during the current or taxable year is deducted from its gross income as expense of the business. Take a corporation that makes \$100,000 during the taxable year. It pays \$25,000 on its bonded indebtedness. It distributes to its stockholders \$50,000. Fifty thousand dollars plus \$25,000 is \$75,000. It would pay 12 per cent on the \$75,000. Twenty-five thousand dollars remains. It carries that much to surplus. On that \$25,000 it would pay 18 per cent. On that a corporation in Great Britain would pay 30 per cent instead of 18 as provided in this bill.

We have provided in this bill, as applying to corporations and individuals and partnerships, an installment plan of payment of income and excess-profits and war-profits taxes.

Under existing law all corporations having an accounting period ending with the close of the calendar year and all individuals are required to make their return on the following March 1 and to pay their tax on or before June 15. Under the present law corporations having a fiscal year other than the calendar year are required to make return on the first day of the third month following the close of the fiscal year. In order to harmonize the payment dates of business concerns and Government transactions, with a view to distributing the burden upon the banks to the best advantage, it is deemed preferable to change the time for filing the return of such corporations to the 15th day of the third month after the close of the calendar or fiscal year. A like period is also provided for individuals having ac-

counting periods for a fiscal year other than the calendar year and also for those having an accounting period closing at the end of the calendar year. In order not to have the large payment of income and excess-profits taxes come upon one date, the bill provides that these taxes be paid in three installments, one-third to be paid at the time of the filing of the return, one-third on the 15th day of the second month thereafter, and the remaining one-third on the 15th day of the fourth month after the time fixed by law for filing the return. In other words, the tax payment dates of individuals and corporations whose accounting period is on the basis of the calendar year will be March 15, May 15, and July 15.

The commissioner may extend the time of the first installment not to exceed two months. If he does extend it, there will be two installments coming due, say, May 15. In the case of taxpayers abroad—and this refers to soldiers and officers abroad—the Commissioner of Internal Revenue can extend the time for making the returns as long as he deems necessary. If, in his judgment, it should be extended 2 months or 4 months or 6 months or 12 months, he has the right to do it. I believe that the House will agree that that is not an unjust or an unwise provision.

Mr. LONDON. At his own initiative or by request?

Mr. KITCHIN. He can do it at his own initiative.

It is estimated by the experts that this corporation tax in this bill will raise \$894,000,000 for the calendar year 1918 as against \$528,000,000 for the calendar year 1917 under existing law. From the increased rate of tax it would seem that it would be nearly three times as much as the tax collected last year at the 6 per cent rate, but the difference is that the corporation will have as a deduction from their corporate income at least \$3,200,000,000 as excess-profits tax under the bill, when they had for 1917 only \$1,791,000,000 deduction as excess-profits tax under the present statute.

TITLE III. WAR-PROFITS AND EXCESS-PROFITS TAX.

Gentlemen, we come now to the excess-profits and war-profits tax. This, as I shall explain later, applies only to corporations. I imagine that if there is any protest from any class of business or from any portion or section of the country against this bill, it will be with respect to the war-profits and excess-profits tax. We provide for two methods of computation of the tax; first, the war-profits method; second, the excess-profits tax method; and whichever is higher, whichever yields the greater tax, that is the method by which the tax is to be computed and paid.

The House will find that that is necessary in order to get the amount of tax required and to equalize to some extent the taxation under these methods.

The tax under the excess-profits method is 35 per cent of the amount of the net income in excess of a deduction of 8 per cent of the invested capital plus a specific exemption of \$3,000 and not in excess of 15 per cent of the invested capital; 50 per cent of the amount of the net income in excess of 15 per cent and not in excess of 20 per cent of the invested capital; and 70 per cent of the amount of the net income in excess of 20 per cent of the invested capital. The tax under the war-profits method is 80 per cent of the net income of the taxable year of a corporation in excess of the average net income made for the three prewar years 1911, 1912, and 1913, plus 10 per cent on all new capital put in since the prewar period and plus a specific exemption of \$3,000; or if the capital has decreased since the prewar period, a reduction of 10 per cent is made in the capital invested. If a corporation was not in existence during the whole of any one calendar year in the prewar period, it is given a deduction of 10 per cent on the invested capital during the taxable year plus the \$3,000 specific exemption, and the 80 per cent rate applies to the balance of the net income. We provide, however, in order to give each corporation doing business during the prewar period that will pay the tax under this excessively high rate of 80 per cent, a fair and reasonable return on its capital before the 80 per cent applies. We give it a credit or a deduction in all cases of at least 10 per cent on the invested capital during the taxable year, whether or not it made as much as that during the prewar period. In other words, if under the war-profits method a corporation was making 4 per cent, or 6 per cent, or 8 per cent, or 9 per cent a year, or not making any per cent, during the prewar period, that corporation before the tax attaches can have at least a 10 per cent deduction or profit on the capital invested during the taxable year plus the \$3,000 specific exemption. As I explained yesterday, that no more than equals a 6 per cent profit in the prewar period. That is, a \$100,000 income on a million dollars of capital invested does not go any further now than a 6 per cent profit or deduction during the prewar period.

As I explained—and I see there are some gentlemen here who were not here yesterday—I think all of us will recognize this as a fact, that if a million-dollar corporation made \$60,000 average profit, or 6 per cent, during the years 1911, 1912, or 1913, or before the war, and paid out that \$60,000 to its stockholders, they could take that \$60,000 and buy as much, if not more, of the requirements of life than the same stockholders in the same company can buy now if the company distributes to them on a million-dollar capital \$100,000. Or if the company, instead of distributing the \$60,000 during the prewar period, retained it in its surplus to install new machinery, to erect larger buildings, or to expand its plant, the \$60,000 would have gone as far, if not further, for that purpose than \$100,000, or 10 per cent, would now.

The committee felt that it would not be justified, in the interest of fairness and justice to the business throughout the country, to have what is called a distinctive war-profits tax, but that some reasonable per centum on capital invested should be fixed as a minimum deduction before the high rate of 80 per cent should attach. A distinctive war-profits tax with an 80 per cent rate was suggested by some high and respectable authority to the committee. A distinctive war-profits tax with an 80 per cent rate is this: An 80 per cent tax on the total net income during the taxable year in excess of the amount which the corporation was earning during the prewar years, whether such earnings were 2, 3, 4, 6, 10, or 50 per cent. There were thousands of corporations during the years 1911, 1912, and 1913, that were making little or no profits. For many industries that was a period, as we all know, of depression. There were thousands making less than 6 per cent, many making less than 4 per cent, some making nothing. If we had a distinctive war-profits tax such as was suggested, and which certain newspapers and periodicals in their editorials demanded of the Committee on Ways and Means to incorporate in the bill, it would work out in this way: Take a \$100,000 corporation making \$4,000 or 4 per cent during the prewar period, but now making \$25,000. It could only deduct that \$4,000 from the \$25,000, leaving \$21,000, to which the 80 per cent rate would apply, and 80 per cent of the \$21,000 would be \$16,800 tax, which would be taken from that corporation, while another corporation in the same business, with the same capital, making the same profit now, but fortunate enough to have made during the prewar period equally as large profits as now, making \$25,000 both before the war and now, would not pay a penny of war-profits tax, although it was six times more prosperous before the war than the other corporation and equally as prosperous since the war. You see there would be no excess, there being no difference between the earnings of the taxable year and the prewar earnings, and therefore no tax. As I said, the prewar years was a period of depression for many industries. The woolen industry, like all other industries, has cycles of prosperity and depression.

In these three prewar years I doubt whether the woolen industry on the whole made an average of 5 per cent. I doubt whether the cotton industry made 7 per cent. In fact, I know it made less than 7 per cent. The smaller corporations in the iron and steel industry during those three years averaged less than 6 per cent. Under a distinctive war-profits tax the woolen industry, for instance, making less than 6 per cent—but put it at 6 per cent, that is, \$6,000 on each \$100,000 invested capital—during the prewar period, but now making 25 per cent, or \$25,000 on each \$100,000 of invested capital, would have to pay a tax of \$15,200 on each \$25,000 it makes during the taxable year, over three times as much tax as it is paying under the existing excess-profits tax law. The committee and the Treasury Department finally agreed with it, that it would not be just and right to levy this high 80 per cent rate upon a strictly war-profits basis. Therefore the committee have insisted from the beginning that there should be at least a 10 per cent deduction under the war-profits method if the corporation was not making as much as 10 per cent during the prewar period. And I understand, in fact I know, that the Treasury Department and the Secretary of the Treasury now agree with the committee on that.

Mr. MOORE of Pennsylvania. Will the gentleman state as an illustration the effect of the war-profits tax, as we understand it, upon one of the larger corporations that was doing a fine business prior to the war? I do not want to name any, but I will suggest the Ford Motor Co.

Mr. KITCHIN. Under a distinctly war-profits tax the Ford company would not pay a penny. Under a strictly war-profits tax the Eastman Kodak Co., the National Biscuit Co., the National Cash Register Co., the First National Bank of New York, the American Tobacco Co., the Liggett & Myers Tobacco Co., and hundreds of large companies would not pay a penny, be-

cause they would have little or no profits on invested capital during the taxable year in excess of the profits during the prewar period. Their profits during both periods before and since the war were exceedingly large. In fact, there would be about 25,000 companies in the United States which, under a strictly war-profits tax method, would not pay a penny or would have their profits taxes they are paying under existing law materially reduced, while the profits taxes of all other corporations would be materially increased.

Mr. GREEN of Iowa. And one of the companies is the Standard Oil.

Mr. KITCHIN. Yes; take the Standard Oil Co. of Indiana, and also the Standard Oil Co. of Kansas. The Indiana company was making about 50 per cent before the war and is making that now. That is one of the corporations to which I have referred as an illustration and evidence of the right, justice, and necessity of raising the excess-profits tax rate in order to have anything like equal taxation. Every one of these companies will be reached under the excess-profits tax method, as their profits before the war were about as large as after the war. When you compute the tax by the excess-profits method and then by the war-profits method you will find that they will pay the tax computed by the excess-profits method, as that method for such corporations would yield the larger tax. As I explained, the tax must be paid according to the method which yields the higher tax. All of these companies which I have mentioned and thousands of others would, of course, fall under the excess-profits tax method, because since they were making big profits before as well as after the war, they would pay very little and many of them no tax under the war-profits method. Therefore if the excess-profits tax rate is not increased over the rates of existing law, it is a guaranty that their taxes shall not be increased one penny in order to help get this \$8,000,000,000 with which to win this war. The committee could not justify such favoritism and therefore increased the rates very materially.

Mr. MOORE of Pennsylvania. Now, will the gentleman state the other side of it? What would be the effect of the war-profits tax, as suggested by the Treasury Department originally, upon that company, which had been a competitor of the Ford Co., or any other of these large companies, and which as a competitor had been unsuccessful and unfortunate in the competition prior to the war, but which company is now making a considerable profit?

Mr. KITCHIN. I was coming to the other side of the proposition. From 80 to 90 per cent of the corporations come under the war-profits method, with the 80 per cent rate, and their taxes would be increased from 50 to 300 per cent. Suppose such a company was making 6 per cent before the war and it is now making 25 per cent. It would pay under the war-profits method, as that would yield a much higher tax than the excess-profits method, since its profits have largely increased since the prewar period. That company would pay, with a distinctive war-profits tax as suggested, on each \$100,000 of capital invested the sum of \$15,200, while it now, under existing law, pays \$4,200 on each \$100,000 of capital, an increase of over three times. The Ford Co., falling under the excess-profits method, if no increase in existing rates is made, will pay no increase in the profits tax. Let me repeat, the other companies, its competitors, now, under the present excess-profits tax rate, making 25 per cent, pay only \$4,200 on each \$100,000 of capital invested, but with a war-profits tax and no increase in the excess-profits tax rates these companies that compete with the Ford Co. would have their taxes increased from \$4,200 on each \$100,000 of invested capital to \$15,200, while the Ford Co., that was exceedingly prosperous before the war and exceedingly prosperous during the war, would have its tax increased not a penny to help get this \$8,000,000,000 which we must raise. Under the war-profits method the Ford Co. would pay no tax, would go scot free, since it would have no so-called war profits, as it was making as much profits on capital invested during the prewar period as now, and therefore to catch it and other corporations that were very prosperous before the war and equally so now, we provided the alternative method—the excess-profits method with rates much increased over existing rates.

Upon these grounds your committee reluctantly but of absolute necessity, in the interest of justice and fairness and equality, had to reject the proposition made by the Treasury Department.

Mr. SNOOK. Does the gentleman care to state the reasons that the Treasury Department advanced for opposing this ruling adopted by the committee in following this different rule?

Mr. KITCHIN. The gentleman in the Treasury Department who advanced the reasons very fully was Mr. Leffagwell. He thought an increase in the rates would affect the security market of those stabilized companies which were making good

profits during the prewar period as well as now, that it would affect the stockholders in those companies by reducing the value of their holdings, and he thought that that would have a bad effect upon the security market and do a great injustice to the stockholders; but in answer to that suggestion the committee thought that if we are going to protect anybody we ought to protect all alike—the thousands and millions of small investors who were induced to put their money in corporate stock in 1914, 1915, 1916, and 1917, as well as in the prewar years of 1911, 1912, and 1913, and that we should protect alike those that put their money in corporations not so prosperous as well as those very prosperous during the prewar years. We could not see very much difference. If a widow or other small holder was induced to buy stock in 1915 or 1916 in a new corporation, or an old corporation that was doing well, why should she not have the careful consideration of Congress as well as one who had bought stock in a corporation before the European war broke out, or during the prewar period?

It was also claimed by the department that any increase in the excess-profits tax rates would be too great a burden on corporations falling under the excess-profits method, as the profits they are making now are not war profits but normal profits; that is, profits not materially larger than they were making before the war. The committee, recognizing that perhaps there should properly be some difference in the rate on so-called war profits, that is, the profits made during the war or taxable year in excess of those made during the prewar period and on so-called normal profits, that is, profits not materially larger during the war or taxable year than those made during the prewar period, accordingly provided in the bill a different rate for the two classes of profits. This is done by the alternative methods to which I have referred, the war-profits and the excess-profits methods, the tax to be computed and paid by whichever method yields the higher tax. I wish to say here, if not before, that the Secretary of the Treasury and the Treasury Department strongly urged and indorsed such alternative system or method, while strenuously opposing any increase in the excess-profits tax rates.

The war-profits method catches the corporations that have materially increased their profits, the per cent of profits on capital invested, during the war or taxable year over their profit during the prewar period, and its rate is 80 per cent flat on all profits over their deductions or credits. The excess-profits method catches the corporations whose profits, or per cent of profits on capital invested, during the war or taxable year are not materially higher than during the prewar period. Its rates are lower and graduated according to the amount of profits made during the taxable year, being on the average not more than 60 per cent of the war-profits method rate. Between 80 and 90 per cent of the corporations will pay under the war-profits method and from 10 to 20 per cent will pay under the excess-profits method.

For the most part two classes of corporations come or will pay tax under the excess-profits method. First, those corporations that were exceedingly prosperous during the prewar period as well as since and during the war. The Ford Co., the Eastman Kodak Co., the Standard Oil Co. of Indiana, the Standard Oil Co. of Kansas, and hundreds of other large and successful corporations are illustrations of this class. Most of the corporations paying under the excess-profits method are in this class. If the committee had adopted the department's recommendation not to increase the rates, but let them remain as in existing law, none of these large and prosperous corporations would pay any increase in their profits taxes. In the second class paying under this method are those corporations that are largely overcapitalized, and on account of such overcapitalization, or watered stock, are making or returning on such capitalization only between 8 and 10 or 12 per cent.

The existing excess-profits tax law taxes according to the ability to pay, that is, according to the amount of profits made during the taxable year on invested capital, without regard to the amount made during the prewar period—barring the small differential of 7 and 9 per cent—or the amount of increase of profits during or because of the war. For instance, under present law all corporations making the taxable year 20 per cent on invested capital pay the same rate, whether one was making 20 per cent during the prewar period and another 8 per cent. Excluding the specific exemption of \$3,000, which cuts little figure for the large corporation, every corporation making 20 per cent the taxable year pays under the present law on each \$100,000 capital invested \$2,650 excess-profits tax, regardless of what it was making during the prewar period, except the small differential in existing statute of 7 and 9 per cent.

Under the proposed bill, with the alternative system or method, take two corporations in same business, with same capital, making 20 per cent profit on each \$100,000 invested capital the taxable year.

The one coming within the war-profits method will pay a tax of \$8,000, while the one falling within the excess-profits method will pay only \$4,950. However, if the committee had adopted the recommendation of the department, which it insisted on to the last, that the rates of the excess-profits tax should not be increased but remain as in existing law, the corporation falling in the excess-profits method would pay only \$2,650 tax, while the corporation falling in the war-profits method would pay \$8,000, although each had the same business, the same capital, and made during the taxable year the same profits. As I said, each under present law pays \$2,650. If the department's recommendation were adopted, the corporation coming under the war-profits method would have its taxes increased from \$2,650 to \$8,000, while the corporation fortunate before the war and equally so during the war would not have its taxes increased a penny to help get the \$8,000,000,000 we must raise to win the war, but would pay just what it is paying under existing law, \$2,650. However strong and earnest was the insistence of the department, however hard the committee tried to agree with the department, it was impossible for the committee to conclude that such a proposition was fair and right and just. Many Members believed that the rates we adopted were not high enough to fairly equalize the tax between those paying under the two methods.

For instance, the Standard Oil Co. of Indiana during the prewar years was making out of the people over 40 per cent clear net profits on every dollar of invested capital. It is making that and some more now. It would fall under the excess-profits tax method. The committee could not see any justice, any fairness, in largely increasing from 50 and in many cases to 300 per cent the taxes of 80 or 90 per cent of the corporations of the country, making in most cases less than half the profits of the Standard Oil Co., and in guaranteeing by retaining the rates of the present law that the profits tax of this oil company should not be increased a cent to help get the necessary \$8,000,000,000. This oil company is not alone. There are hundreds and thousands of such companies, very prosperous during the prewar period as well as now, whose taxes would not be increased a dollar under the bill had we not increased the excess-profits rates. If making big profits out of the people is profiteering, then according to no sound principle of reason or right or fairness could your committee see why a corporation that profiteered upon the people during the prewar period and continued its profiteering ever since should not have its tax increased, as well as the corporation that profiteered only since the prewar period.

Let me illustrate the payment of the tax under the war-profits method and under the excess-profits method, with the rates adopted by the committee in the bill and with the rates recommended by the Treasury Department. I have eliminated in each case the specific exemption of \$3,000, as this cuts so little figure in case of the corporations of large capital.

Take two corporations, each with the same amount of invested capital and each making the same amount of profit during the taxable year, one paying under the war-profits method, the other paying under the excess-profits method. The figures I give have been confirmed by the statistical expert of the Treasury Department. The corporation paying under the war-profits method, making \$12,000, or 12 per cent on each \$100,000 of invested capital, will pay on each \$12,000 of profits a tax of \$1,600; the corporation paying under the excess-profits method, with same capital and same profits, will pay, with the rates in the bill, \$1,400 and with the rates recommended by the department only \$600; if making \$15,000, or 15 per cent, the corporation, under the war-profits method, will pay a tax of \$4,000; the corporation paying under the excess-profits method will pay with the committee's rates in the bill \$2,400, and with the department's rates only \$1,200; if making \$20,000, or 20 per cent, the corporation paying under the war-profits method will pay \$8,000, the corporation paying under the excess-profits method will pay with the committee's rates \$4,950 and with the department's rates only \$2,450; if making \$25,000, or 25 per cent, the corporation paying under the war-profit method will pay \$12,000, the corporation paying under the excess-profits method with the committee's rates will pay \$8,450, while under the department's rates it will pay only \$4,200; if making \$30,000, or 30 per cent, the corporation paying under the war-profits method will pay \$16,000, the corporation paying under the excess-profits method with the committee's rates will pay \$11,950, with the department's rates it will pay only \$6,450; if making \$50,000, or 50 per cent, the corporation paying under the war-profits method will pay \$32,000, the corporation paying under the excess-profits method with the committee's rates will pay \$25,950, and with the department's rates will pay only \$18,000.

Even the difference in the amount of the tax under the war-profits method and the excess-profits method, with the committee's increased rates, seems entirely, under all the circumstances, too large. It can only be properly justified, if at all, on the ground that the profits made during the war or taxable year in excess of the profits made before the war, during the prewar period, are war profits, profits made out of or because of the war, and that such profits should bear a higher tax than the profits of corporations that have not materially increased during the war or taxable year over the profits during the prewar period, and which, therefore, can not be regarded as war profits—that is, profits made out of or because of the war. But your committee, after the most careful consideration, could find no way it could possibly justify or defend such a big difference between the amount of the tax under the war-profits method and the tax under the excess-profits method which the low rates urged by the department would make.

There can be no doubt that the profits of many corporations have been increased, and largely increased, because of and out of the war, and we take it that all will concede that it is not unfair or unjust to levy a higher tax on such profits. On the other hand, there are many corporations whose profits were exceedingly small during the prewar period on account of the depression then existing in many industries, but have largely increased since then and would have so increased had there been no war. Such increase in profits can not properly be regarded as war profits; but the difficulty is there is no rule or criterion by which it is possible to separate such corporations or profits from the actual war profits or war-profiting corporations.

Mr. MADDEN. Will the gentleman yield?

Mr. KITCHIN. I yield to the gentleman from Illinois.

Mr. MADDEN. Without having given very much consideration to the proposition that the gentleman is discussing in detail, I was wondering what difference there would be, for example, in the income derived if the tax was levied on the income without respect to excess profits, whether the rate levied on account of the large income would not yield as much money as it will under the method proposed by the committee? Of course I do not pretend to say that I know. I am asking for information.

Mr. KITCHIN. We would have to levy at least 40 per cent on the total net income of all corporations. Of course, in any tax measure there are bound to be inequalities. There will be cases that will work a hardship, just as in all civil laws and in all criminal laws certain cases will arise where the law, civil or criminal, is going to work a great hardship. The struggling corporation will suffer a greater hardship by the method of a straight income tax in order to raise the \$3,200,000,000 than by the excess or war profits tax.

For instance, you would have to levy a 40 per cent tax to get the necessary revenue. Here is a company that makes 6 per cent. Forty per cent would be 2.4 per cent of the income on the basis of its capital. Deduct \$2,400 from \$6,000 and you have \$3,600, and that corporation will only have left 3.6 per cent of its income on the basis of its capital. Here is another corporation making 25 per cent, and when you deduct 40 per cent from that that corporation has left 15 per cent on the basis of the capital. Now, we want not only to protect as much as we can but to save the smaller corporations.

Mr. MADDEN. Has the committee considered the two propositions with a view of ascertaining how income as to corporations can be equalized and yet not be reduced by one method more than the other?

Mr. KITCHIN. Yes; the committee considered the income proposition suggested by the gentleman from Illinois very carefully. We had a very strong argument on that point; one of the most interesting and forceful arguments that we had on any subject was by Mr. A. F. Thomas, of Lynchburg, on this subject. We gave considerable thought and study to it, but we found there would be more inequalities in that method than in the one adopted. I do not think the gentleman will find very many inequalities in the operation of these two methods, with other provisions connected with them that we have in the bill, to which I will call attention later.

Mr. DENISON. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. DENISON. In taking care of the war-profit tax there is a 10 per cent deduction on the capital stock?

Mr. KITCHIN. Invested capital.

Mr. DENISON. What does that mean?

Mr. KITCHIN. Invested capital in the bill is practically what it is under the present law, cash paid in, earned and paid-in surplus and undivided profits, not including surplus and un-

divided profits earned during the taxable year, and the value of tangible property turned over for stock or shares.

Mr. DENISON. And a corporation overcapitalized will be allowed a larger deduction than one that is not overcapitalized?

Mr. KITCHIN. Yes; but those overcapitalized corporations, as a rule, are not making over 10 per cent, and many not that much on their capitalization; they will fall within the excess-profit clause, and we catch them with the 8 per cent deduction. And, too, we have provisions in the bill by which the department can squeeze out the water and find the amount of actual invested capital for the purpose of the deduction. In many cases, of course, this will be difficult.

Mr. DENISON. In figuring the 10 per cent deduction that is levied, of course there is no allowance made for the money that is borrowed and used as capital?

Mr. KITCHIN. The bill provides—

There shall be deducted from invested capital as above defined an amount equal to the average amount of capital invested in inadmissible assets held by the corporation during the year: *Provided*, That at the option of the corporation the amount to be so deducted shall be reduced to the amount by which such average amount invested in inadmissible assets exceeds the average amount of borrowed capital of the corporation (other than indebtedness maturing within one year of its creation, all accounts payable and current liabilities) for such year, but in such case in computing the tax under this title there shall be included in the net income for such year the same proportion of the total amount of interest and dividends received during such year from such inadmissible assets as the amount of such capital invested in inadmissible assets not deducted from invested capital bears to the total amount of such inadmissible assets.

To illustrate: If a corporation has borrowed money to the amount, say, of \$50,000, and it has what we call in the bill for the sake of simplification "inadmissible assets," which are assets whose income or interest is not subject to the tax, tax-exempt securities, to an amount of \$75,000, instead of having the \$75,000 deducted from capital invested there will be deducted only \$25,000, being the excess of the inadmissible assets over the amount of borrowed capital. In such cases borrowed capital not in excess of the amount of such assets is practically counted as part of invested capital.

Mr. DENISON. Let me put this question: If a corporation has \$100,000 capital, in figuring the war-profits tax there will be deducted first 8 per cent?

Mr. KITCHIN. In the excess-profits method it will deduct 8 per cent, but in the war-profits method it will deduct first at least 10 per cent; that is, if it was making 10 per cent or less during the prewar period. But let us understand this fact, which I was going to explain if I had not been interrupted: Say it was making 11, 15, or 20 per cent, it would have that per cent on capital invested as a deduction. Then when the tax is computed with such prewar deduction, and the tax is less than it would be under the excess-profits method, it would pay tax under the excess-profits method, as that would be the larger tax. That is the only way to catch these corporations that were doing a very profitable business before the war and equally as profitable during the war.

Mr. DENISON. If in the prewar period a company was making 10 per cent it would have a 10 per cent deduction?

Mr. KITCHIN. Yes.

Mr. DENISON. If the company was capitalized at \$50,000 and it borrowed \$50,000—

Mr. KITCHIN. It would only have \$50,000 as invested capital, because it would get its interest deduction on the \$50,000 borrowed. If we did not have it that way every corporation would do business on borrowed money and corporations would hereafter organize with as little of the stockholders' capital as possible, and in many cases with no capital. They would make the difference, in any event, between the 10 per cent deduction and the 5 or 6 per cent interest they would have to pay.

Suppose we made borrowed capital a part of invested capital. Suppose the gentleman from Illinois [Mr. DENISON] and the gentleman from Pennsylvania [Mr. MOORE] and myself desired to get up a corporation with an invested capital of \$300,000, and the gentleman from Massachusetts, the gentleman from Washington, and the gentleman from Iowa also desired to organize another corporation with a capital of \$300,000, both going into the same business. Each of us has \$100,000 cash in the bank to put into the respective corporations. Our stockholders are a little bit shrewd and on the make. Knowing that we could count borrowed money as invested capital for the purpose of the deductions, we conclude to put no part of our cash in as capital stock, but after organization, with a nominal capital, we would let the corporation borrow from Moore his \$100,000 and pay him 6 per cent interest, and then borrow from the gentleman from Illinois his \$100,000, and from me my \$100,000, paying each of us 6 per cent interest. The corporation would have \$300,000 borrowed money as capital invested.

It would have a deduction of 10 per cent on the \$300,000, and we stockholders would get 6 per cent interest, making 16 per cent. The other three gentlemen are not as keen as our crowd. They put into the capital stock of their corporation their \$300,000 in case their corporation would get a deduction of only 10 per cent and three gentlemen would get no interest on their money.

Mr. DENISON. But, of course, if you are going to allow a deduction of 10 per cent upon borrowed money as capital, you would not allow a deduction for interest. You are figuring both.

Mr. KITCHIN. Even in that case we would have an advantage of the difference between 6 and 10 per cent—that is, 4 per cent. We thought it was best and fairest to make capital invested the actual money or property you put in and not borrowed capital. Borrowed capital is just like rent for a building in which to do business. Now you deduct your interest on borrowed capital the same as the rent paid for a building in which you do business as part of the expense. If it cost you \$6,000 on every \$100,000 you borrow, you would deduct it. That is all your borrowed capital has cost you. That is the policy of all excess or war profits tax laws in every country which has such a tax. None allows borrowed capital, and there are more than a half dozen other countries that have such a tax.

Mr. DENISON. The result is that when you are figuring the war-profits tax a corporation that can raise larger capital will pay less in war profits than a corporation that can not have as much capital but has to borrow money. Is not that true?

Mr. KITCHIN. One would have less deduction than the other, but the one that borrowed most of its capital employed would make a larger percentage of profits on the money it actually invested. If I can borrow money without using my own money, why should I have the same deduction of 10 per cent on that borrowed money as you do on your own money put into your business? The gentleman will understand that companies that do the largest borrowing are the companies that have the largest capital and surplus. They are the big, wealthy companies. They issue millions and millions of dollars in bonds and let them run for years and years. The large stockholders are frequently its bondholders. If such borrowed capital should be counted as invested capital, many of our largest corporations would escape millions of dollars of taxes. The little corporations borrow only for the current year to do business and then they pay the money back at the end or during the year with interest, and the interest is deducted in computing their net income.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONGWORTH. It has occurred to me that the most logical objection to the raising of the present rates in the excess-profits tax is the effect that it might have upon extra-hazardous industries, such as the oil-prospecting industry, lead, and zinc—and this may be of interest to some gentlemen from Oklahoma whom I see about me. Does the gentleman think that the allowances that have been made for amortization of plants and for depletion will be sufficient to prevent the destruction of that industry?

Mr. KITCHIN. There is no doubt about it. I am confident it will be sufficient, because we have a special provision in respect to depletion and depreciation in mines, gas and oil wells, and such hazardous undertakings, and we think the Commissioner of Internal Revenue, with the advisory board, can in every case take care of such a corporation where there would be an exceptional hardship.

Mr. LONGWORTH. I asked the question because I read this morning an interview alleged to have been had with the President of the Standard Oil Co., who said the rates of the excess-profits tax, as I understood it, would absolutely destroy the so-called oil wildcatting industry, because the industry is so hazardous and the opportunities for profits so few that the taking away of as high as 70 per cent would absolutely destroy the industry. May I suggest to the gentleman, also, that inasmuch as excess-profits taxes no longer apply to individuals, the wildcat industry would not be much interfered with?

Mr. KITCHIN. The president of the Standard Oil Co. is about as ignorant of the provisions of this bill as are a few other presidents of big companies who desire to escape taxation and the majority of the metropolitan editors of the country. If he had read the bill, he would have ascertained that individuals and partnerships are not included in the excess-profits tax provision. Our information from a gentleman of this House who is interested in the oil business and who knows it from top to bottom, and from others in the business, is that more than 9 out of 10 wildcaters are individuals and partnerships, and only a

few corporations, a very limited number, indulge in wildcatting. A corporation will want Tom, Dick, and Harry, the individuals, to go out and take all of the risk in finding where oil and gas and lead and zinc are, and then the corporation buys it from these wildcaters.

Mr. GREEN of Iowa. One objection made to the increase in excess-profits tax rates was that it bore too heavily on small corporations. Will the gentleman state whether that was taken care of?

Mr. KITCHIN. Yes. We have taken care of the small corporations. In view of the fact that in many cases it has been the experience that the excess-profits tax under existing law has borne too heavily on many small corporations with capital of \$50,000 or less this provision was incorporated in the bill as a protection to them:

SEC. 302. That in the case of a corporation whose invested capital for the taxable year is not more than \$25,000, the tax imposed by section 301 shall not be more than 35 per centum of the amount of its net income for such year in excess of \$3,000; and if its invested capital for the taxable year is more than \$25,000 but not more than \$50,000, such tax shall not be more than 40 per centum of the amount of its net income for such year in excess of \$3,000. This section shall not apply to any corporation whose net income is more than \$50,000.

Mr. GREEN of Iowa. How large a proportion of the corporations are included under the war-profits tax?

Mr. KITCHIN. With no increase in the excess-profits tax rates, Dr. Adams, chairman of the Excess Profits Tax Advisory Board, who has given a great deal of study and examined thousands and thousands of corporation returns, declared in his testimony before us that 10 per cent of corporations would come in under the excess-profits tax method and 90 per cent under the war-profits tax method. With the increased rates of the excess-profits tax in the bill perhaps 15 or 20 per cent would come under that and 80 or 85 per cent under the war-profits method. I now yield to the gentleman from Washington.

Mr. MILLER of Washington. According to the deduction as explained by the chairman, is not there a possibility under this law of corporations running to the greatest possible extent on borrowed capital? In other words, does not a corporation that can borrow money, and use as much borrowed money as it can handle, have a less rate of taxation than where the corporation uses its own money? Is not there an inducement there to borrow money?

Mr. KITCHIN. No. Under the suggestion of the proposition of the gentleman from Illinois [Mr. DENISON] there would be such a tendency. Under this bill there would not be that tendency. We prevent just exactly what the gentleman has in mind by not permitting them to include borrowed capital as invested capital; that is, they are not allowed to include borrowed capital as invested capital for the purpose of determining the deduction.

Mr. BANKHEAD. On the proposition of the allowance made on invested capital I desire to submit this question to the chairman. Take a corporation organized prior to 1911 with a capital stock of \$100,000. Suppose during the three prewar years it has made less than 10 per cent. Subsequent to this time it has out of its accumulations invested in other property to the extent of, say, \$50,000, say, in a mine. Would it be entitled to credit to the value of that \$50,000 as a new investment plus the original capital stock of \$100,000?

Mr. KITCHIN. Yes. If they put in the original capital stock \$100,000, and earned and accumulated a surplus of \$50,000, and put it in a mine, the invested capital would be \$150,000. But if they took this \$100,000 and put it in a mine or timber, and in four or five years it increased in value \$50,000, we would not allow them to include that \$50,000 of unearned increment as capital invested.

Mr. BANKHEAD. The actual value of the \$50,000 additional property at the time of the investment would be included as part of the net investment?

Mr. KITCHIN. What they actually put in the mine—not the unearned increment in the mine. If you bought a mine for \$50,000 and held it for four or five years without doing anything to or with it, and it was then worth \$100,000, there would be an unearned increment of \$50,000. That is not put in as invested capital, and it should not be, for the reason that if it be put in as invested capital the company ought to pay the income tax and excess-profits tax on that \$50,000. If such unearned profit or increment should be regarded as surplus or capital for the purpose of the deduction in reducing the tax, then that \$50,000 ought to be subject to tax, the same as other profits and income. But corporations that hold that they should be allowed to treat such unearned increment or profit as capital or surplus for the purpose of deduction are opposed to any law that would make such increment or profit subject to the income

or excess-profits tax until the profit is realized by sale. It is never allowed as part of invested capital nor made subject to tax until realized by sale.

Mr. MORGAN. I would like to refer again to the statement made, to the effect that practically nine out of ten of all the wildcatting is done by individuals and not by corporations.

Mr. KITCHIN. That is our information.

Mr. MORGAN. Now, I would like to know how reliable the gentleman's information is. In my district—in my county, for instance, which is 100 miles away from production—there are, perhaps, half a dozen wells being driven there now, and I do not think a single one is being driven by an individual or a partnership.

Mr. KITCHIN. The corporations driving for the well are oil operating or producing companies, are they not?

Mr. MORGAN. Some of them are and some are not.

Mr. KITCHIN. Nineteen-twentieths of the corporations digging wells are in the operating business, producing oil for the market, are they not? The gentleman will find it so. If so, they are taken care of, all losses are deducted from the income during the taxable year, but they are not what you call "wildcaters." A wildcatter, as I understand it, is a man who goes out to find a well. He may lose a thousand dollars before he strikes oil. When he makes a find he then sells it out to some operating corporation, which is to operate the well. Then he goes off and hunts for another one. That is what they call a "wildcatter."

Mr. HARDY. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. HARDY. I have got a proposition along a new line, which I desire to submit to the gentleman. Does this bill in practice consider the sale of property owned by the individual as a part of his gross income?

Mr. KITCHIN. Yes; the difference between what it cost him, if he has bought it since 1913, and what he sells it for, allowing for improvements, depreciation, and so forth, is part of his net income.

Mr. HARDY. Let me propound this question: As I understand it, the net income is ascertained by subtracting what he paid for his property from what he sells it for if he bought after March 1, 1913?

Mr. KITCHIN. Yes; taking into consideration improvements, depreciation, and so forth. If he bought prior to March 1, 1913, it matters not what he paid, its value is taken as of March 1, 1913. The difference between that value and what he sells it for is his net income or profit on the sale.

Mr. HARDY. Let me make this inquiry: Suppose A bought a ship in May, 1913, for \$100,000, and suppose B bought a ship just like it in 1916 and paid \$200,000. Now, in 1918, A and B both sell those ships for \$400,000—

Mr. KITCHIN. Of course, the man who paid \$100,000 since March 1, 1913, would pay an income tax on \$300,000. He would be allowed a proper deduction for depreciation. And the man who paid \$200,000 has made only \$200,000, and he pays an income tax on \$200,000.

Mr. HARDY. Now, here is a transaction in exactly the same shape: A party wants to buy each ship. If one of them sells, he must pay taxes on \$300,000 and the other on \$200,000. Is not that going to affect all trading?

Mr. KITCHIN. If a man who paid only \$100,000 for the ship and sold it for \$400,000 was not taxed on his income or profit of \$300,000, and the man who paid \$200,000 and made \$200,000 was not taxed on his profit or income of \$200,000, and if it were not the law to tax a person on what he made in profits, then the whole principle of an income-tax law would fall. Suppose you are a lawyer and you make \$50,000 a year and a lawyer across the street makes \$25,000 a year. Do you think the lawyer that makes \$25,000 a year ought to pay the same amount of income tax as you do?

Mr. HARDY. That is correct, because you tax each of us on what we made during the year. Let me make this suggestion to you: Suppose two years ago you bought your home and you paid a price for it that was 50 per cent more than it was worth in 1913. Now, another man has owned his home all that time. If each of you sell, why should one pay more tax to the Government than the other?

Mr. KITCHIN. The one making the larger net profit or income should pay the larger tax. Why should we have ever declared time and time again for an income tax, for a tax on net profits or income? Why should Congress go to the trouble of submitting an income-tax amendment to the States and the States go to the trouble of ratifying it if you are not going to tax the profit or net income that a man makes? I would say to the gentleman that we had an income-tax law for a while, back in Cleveland's time, and if he will read the debates on the bill he will find that the question suggested was never raised there.

We had an income tax in 1913 that applies exactly to the cases the gentleman gives, as does this bill, and no man ever raised that objection. We had the income-tax law of 1916, applying to the case the gentleman gives, exactly like this bill, and nobody in that debate raised a question about it. Again, in 1917, we had a law applying to cases such as the gentleman cites, exactly like this bill, and nobody raised such objection then. Now, let me ask him this question again: If I am a lawyer and make \$50,000 a year, and you, as a lawyer, make \$25,000 a year, should I pay the same amount of tax as you?

Mr. HARDY. Not at all.

Mr. KITCHIN. Should I not pay more?

Mr. HARDY. Do you consider it a profit if I have a home of 100 acres—

Mr. KITCHIN. Stand by your ship proposition.

Mr. HARDY. We will take the same principle. You have a home right opposite me, and each of the homes consists of 100 acres, with a similar quality of land. I bought mine way back yonder—

Mr. KITCHIN. It does not make any difference when you bought it. It is the profit.

Mr. HARDY. You bought yours recently. Suppose we exchange those places, is there any tax on that?

Mr. KITCHIN. That specific question has never been presented to the Treasury Department for a decision, and in all probability it would be very difficult to determine the income or profit in such a case. In my opinion there would be no tax in that case.

Mr. HARDY. Yet you gave for your property twice as much as I gave for mine. So you can pay me the equivalent of twice as much as I gave for my land, but can not pay me in money, without paying the tax.

Mr. KITCHIN. It all resolves itself into a question of whether you shall pay an income tax on profits and how much were the profits. That is all there is to it. I do not care whether it is ships, or lands, or houses, or dogs, or horses, or anything else. If you put \$100,000 in a proposition and you get \$200,000 out of it, making a clean net profit of \$100,000, you pay a tax on that profit. If another man puts \$150,000 in it and gets \$200,000, he pays an income tax on his \$50,000 net profit.

Mr. HARDY. On the other hand, you and I have two tracts of land exactly alike. I do not see why you should be deemed to be getting more profit out of the sale of your land than I get out of the sale of mine simply because you bought it before I did.

Mr. KITCHIN. If you own one piece of land on one side of the road and I on the other, and you paid the same for that land as I paid for mine, and we both sell our land, and each gets \$100,000 profit on it, our taxes will be the same. But if I sell for \$50,000 less and make only \$50,000 and you make \$100,000, I will pay on \$50,000 profit and you will pay on \$100,000 profit.

Mr. GARRETT of Texas. In the one instance, where the property has been held for a long length of time, you fix the time this side of the adoption of the income tax and fix its value as of that time. The question of how long they held it does not enter into it?

Mr. KITCHIN. Yes. If purchased before March 1, 1913, the time of the adoption of the constitutional income-tax amendment, the value is taken as of that date; if purchased since, the purchase price is the basis for ascertaining the profit.

Mr. HARDY. Here are two pieces of property—

Mr. KITCHIN. Of course, up to March 1, 1913, all the profits accumulated are untaxed. Why? Because we had no power to tax income without apportionment. The constitutional amendment did not go into effect until March 1, 1913. Therefore we provided in the income-tax act of 1913 that the value of property purchased prior to March 1, 1913, and the profits accumulated on the purchase of that piece of land up to March 1, 1913, are exempt from taxes, for the reason that we did not have the power to levy an income tax prior to March 1, 1913.

Mr. BLACK. Let us suppose that a man bought a piece of property on March 1, 1913, and that in the meanwhile it increased in value, say, 25 per cent, extending over a period of five years.

Mr. KITCHIN. Yes.

Mr. BLACK. And he sells it. Now, does he have to pay on the 25 per cent, or is there any apportionment for one year?

Mr. KITCHIN. No. There is no apportionment. You have the benefit of improvements and depreciation and income, if any, from the property.

Mr. BLACK. I simply wanted to know the method of construction, whether or not they apportioned it.

Mr. KITCHIN. I will say that it is a very late day for gentlemen to raise this question for the first time since the income-tax question was first before Congress away back in 1893 or 1894. We have had several income-tax acts, and it would be strange now to question it because some gentleman thinks there is some little defect in it; it would be experimental and unwise to change the whole principle of the income tax. There may be a great deal in what the gentleman from Texas [Mr. HARDY] suggests, but I am unable to see it now.

Mr. GARRETT of Texas. I do not think my colleague from Texas correctly understood the distinction as to time.

Mr. KITCHIN. Perhaps that misled him.

Mr. HARDY. I say you are taxing one man twice as much as the other on the selling of the same kind of property at the same price.

Mr. KITCHIN. If he makes twice as much profit, he should pay twice as much tax.

Mr. HARDY. If their property is of equal value, they would have an equal profit in selling at an equal price.

Mr. KITCHIN. Suppose the gentleman and I each bought the same number of shares of Bethlehem stock. I paid \$50,000, he paid \$100,000; we both sell for \$200,000. Should I not pay a tax on my profit of \$150,000, and should not the gentleman pay a tax on his profit of \$100,000? I do not understand the point of the gentleman from Texas. It may be my own fault, and I am afraid that the gentleman from Texas may not understand me. It may be my own dullness that prevents me from understanding exactly what the gentleman has in mind.

Mr. HARDY. I think I have made it clear.

Mr. KITCHIN. I think the gentleman made it clear on the ship proposition. I understood that clearly.

Mr. HARDY. We will take the home proposition, where the two pieces of property are exactly alike, with the same improvements. They are worth exactly the same money on the market. But by this provision you make the one that has been owned the longest worth a great deal less, because you tax the sale of it a great deal more.

Mr. KITCHIN. We do not tax the sale of it at all, except the stamp tax. We tax the profits, whatever they are, big or little. It is not a question how long it is owned, but how much net profits in the sale when the sale was made.

Mr. HARDY. Of these two men, each selling his tract of land for \$10,000, one of them gave \$8,000 and the other paid \$5,000, one will pay to the Government more tax than the other, though it looks to me that each of them has done precisely the same thing.

Mr. KITCHIN. Yes. So, in the Bethlehem stock illustration I gave, both of us did precisely the same thing, only one made more profit than the other. What does the gentleman think the constitutional amendment meant when it declared that Congress can levy tax on incomes from whatever source derived?

Mr. HARDY. Will not the gentleman let me ask him the question I wanted to ask?

Mr. KITCHIN. Yes.

Mr. HARDY. Does not that render the man's property less valuable if he has had it a long time?

Mr. KITCHIN. I do not see it. He is entitled to allowances for improvements, depreciations, and so forth. He also gets the benefit of all incomes or profits from the property while he owned it. If he makes more profit, he pays more tax. If I own a piece of property and the sale of it is taxed, and the tax last year was 2 per cent on the sale, and we passed a law increasing it to 12 or 15 or 20 per cent, the sale value may be lessened to the extent of the increase because there must be a larger tax paid on it. Such lessening in value would apply to every kind of a tax.

Mr. HARDY. Then you make that tax unequal between these two tracts of land. How is it fair to do that?

Mr. KITCHIN. There is no inequality unless every tax or increase of tax works an inequality. How else would you levy an income tax on the profits? We have been doing it that way since 1913.

Mr. HARDY. I would not levy an inequitable tax if I could not levy an equitable one.

Mr. KITCHIN. If the gentleman will draw up an amendment and submit it to me, I will have the committee consider it, because I feel sure there must be some merit in it, otherwise the gentleman from Texas would not propose it. I think the gentleman would not make a suggestion that did not have merit in it, though I must candidly confess that I am unable to see at this time much in it.

Mr. HARDY. I find that many men to-day who have had property a good while hesitate to sell it because what they

regard only as an advance in price in proportion to the general rise in prices is to be taxed as profits in case they sell.

Mr. KITCHIN. Yes. That is the fault of the tax; not of any special provision, but of the general principle of the tax itself.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes; I will now yield to the gentleman from Texas [Mr. BLANTON].

Mr. BLANTON. In what is known as the Caddo oil field or Ranger oil field in Texas many of the lands were taken up under the homestead laws and for those lands very little money was paid years ago. But since March, 1913, since oil has been found in that section, what is known as "oil bonuses" have been paid; a lease has been made each year as high as \$1,000 an acre in some cases. Is that \$1,000-acre lease considered profit on the land? Does it come under this tax? Is it an accumulation on that land?

Mr. KITCHIN. No. You pay the income on the \$1,000. If you lease it for \$1,000, that goes into your income just as if you would rent out a tract of land or building.

Mr. BLANTON. Then the sublessees receive higher profits?

Mr. KITCHIN. Yes; and if they would sell it again—

Mr. BLANTON. The owner's first lease is not profit?

Mr. KITCHIN. No. If I rented out a farm one year for \$1,000 and the next year rented it for \$5,000, the rent received as cash would go into my gross income receipts for the taxable year in which received.

Mr. BLANTON. The royalty he receives is profit? He receives one-eighth royalty on the oil.

Mr. KITCHIN. Yes. The amount received as royalty goes in as part of his income for the taxable year.

Mr. HASTINGS. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HASTINGS. He pays tax on the bonus?

Mr. KITCHIN. Yes; whether it is part of the product or the price; that is part of his income.

Mr. GANDY. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GANDY. I wanted to ask the gentleman in regard to oil prospecting, to which reference has been made. I do not know what the situation is in other parts of the country, but in the Wyoming fields, just west of where I live, certainly the percentage of 19 out of 20, as between private individuals and corporations, will not apply.

Mr. KITCHIN. Those are what you call "wildcaters"?

Mr. GANDY. Yes; "wildcaters." Practically every well drilled in that field is drilled by a small corporation.

Mr. KITCHIN. Is that small corporation engaged in the business of operating wells and producing oil, or is its sole business of going out and finding wells to sell them to other people?

Mr. GANDY. If they find oil, they may sell it. But these are not subsidiary corporations. Perhaps a dozen of them are located in my city. Now, I want to ask this question, so that there will be no doubt about it. I presume the chairman of the committee is familiar with the way in which "wildcat" companies and prospecting companies are floated.

Mr. KITCHIN. I ought to be familiar with it. At least a hundred persons, claiming to be interested, have told me about this business since January, 1917. I think I know how to operate one right now, how to get up one, how to drive a well, and almost where they are. Go ahead.

Mr. GANDY. Taking a concern with \$100,000 capitalization, the stock selling below par, as it practically always does. Assume that the company sells \$10,000 and takes the \$10,000 and goes out and puts it into development. If they do not find any oil, that is the end of the company. But if they do find oil, there having been a \$10,000 investment, the stock having floated below par, on what basis would you figure your income tax?

Mr. KITCHIN. Does the gentleman mean the man who is going to operate the well?

Mr. GANDY. Assuming that the company went right on with it and became an operating company after the wildcat period?

Mr. KITCHIN. Then, there would be 10 per cent deducted on all the money it put into the well and improvements. Whatever it lost in the taxable year, whether driving for wells or otherwise, would be deducted from the gross income. Now, if the gentleman will turn to the depletion provision, section 234, subdivision 9—it is also in other sections of the bill, as it applies to individuals and corporations—he will find that the depletion provision takes care of meritorious cases.

Mr. GANDY. I just want to make the observation that wildcatting for oil and the development of new mines are hazardous undertakings.

Mr. KITCHIN. Of course they are.

Mr. GANDY. I am not clear from reading the bill that we are going to take practically all the profits that come to the few who make a success of it, but if we are going to do that, then we certainly will stop the development of mineral resources in this country.

Mr. KITCHIN. If the gentleman will turn to page 38 of the bill, section 234, he will find the language there about as clear as I can state it. I will read it:

(9) (a) In the case of oil and gas wells a reasonable allowance for actual reduction in flow and production, to be ascertained not by the rush flow but by the settled production or regular flow; (b) in the case of mines a reasonable allowance for depletion; (c) in the case of mines, oil and gas wells, a reasonable allowance for depreciation of improvements; such reasonable allowance in all the above cases to be made according to the peculiar conditions in each case and under rules and regulations to be prescribed by the commissioner with the approval of the Secretary.

The gentlemen interested in these enterprises desire Congress itself to do that which is impossible—to pass a law that in advance of any knowledge of such peculiar conditions as surround each case would relieve each case from exceptional hardship. The law can not do that. Somebody must do that, but not Congress. We can not pass a law that can reach and relieve of itself each particular, peculiar case. You must take the peculiar conditions surrounding each particular case. Congress can not do that, so we put this power in the discretion of the Commissioner of Internal Revenue, and we have also provided in this bill for the creation of a tax advisory board to pass upon these exceptional cases. Take corporation A, which would have such peculiar conditions surrounding its particular business that it would be a hardship to collect the tax with only the allowance of the 10 per cent deduction. It goes before the commissioner and at its request its case can be put up to the Advisory Board. The Advisory Board and the commissioner will consider the peculiar merits of its case, and if they find it is a case in which an exceptional hardship will be caused they can relieve it by this depletion and depreciation provision.

Mr. GANDY. I do not think the gentleman quite gets the point I am making. The matter of depletion or the matter of depreciation applies to a going concern, an old concern. Here is a new concern.

Mr. KITCHIN. All right. Here is a concern you said had a capital of \$100,000. If it invested it in property and sold it for \$10,000, it would not pay anything, as there would be no profit—no income.

Mr. GANDY. It went into business on the basis of investing \$10,000.

Mr. KITCHIN. Yes.

Mr. GANDY. If the company has struck no oil, then it has gone to smash, as we say; but if it does strike oil, then its property at once becomes valuable.

Mr. KITCHIN. Becomes worth \$100,000.

Mr. GANDY. More than that, or you can use that figure.

Mr. KITCHIN. And it continues to operate.

Mr. GANDY. As those companies usually do, the wildcat sells out. The chairman of the committee was correct when he said that the going concern, the big oil concern, is not a wildcat. That is the one that buys the property after the wildcat gets out. After the little man gets out, then the going concern, the big company, gets the well.

Mr. KITCHIN. Yes.

Mr. GANDY. The wildcat sells his property. Overnight, by striking oil, the property has advanced in price.

Mr. KITCHIN. Instead of operating he sells.

Mr. GANDY. Yes.

Mr. KITCHIN. For \$100,000?

Mr. GANDY. Yes.

Mr. KITCHIN. And he paid \$10,000?

Mr. GANDY. He invested \$10,000 in this development.

Mr. KITCHIN. The property cost him \$10,000 and he sells it for \$100,000. I think he would pay the tax on the difference. If I buy a herd of cattle or any other kind of property for \$10,000 and sell it for \$100,000, and thereby make a clear profit of \$90,000, I pay an income tax on \$90,000, though I may have lost money every year I was in the cattle business before that time. Why should I not pay on what I made that year? An individual would not pay any excess-profit tax on that, only an income tax. A corporation would pay both an income and an excess profit on such a transaction, as the excess and war profits tax only applies to corporations, not to individuals or partnerships.

Mr. GANDY. Then the effect of this would be that wildcatting would be done by private individuals.

Mr. KITCHIN. Would not the gentleman think that it was good public policy for the wildcatter to operate as an individual or partnership instead of as a corporation?

Mr. HASTINGS. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HASTINGS. I want to invite your attention to subdivision 4 of the same section. Suppose this was a going corporation and it drilled a lot of wells, would not subdivision 4 apply to it—"losses sustained and charged off during the taxable year, and not compensated for by insurance or otherwise"?

Mr. KITCHIN. I said that if losses are had during the taxable year they would be deducted. The gentleman is right.

Mr. BORLAND. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BORLAND. Before the gentleman gets off from the excess-profit tax I want to say that I noticed some time ago an interview with a prominent public man in which he said that the excess-profit tax was an absurdity. I have not gathered that from the very clear explanation of the gentleman from North Carolina, but what is the basis of that criticism, if the gentleman knows? It came from a very responsible public man.

Mr. KITCHIN. The public man to whom the gentleman refers who was reported as saying that this bill was a mess of absurdities?

Mr. BORLAND. Yes; and practically unworkable and impracticable; that was the inference of it.

Mr. KITCHIN. I regret that the gentleman from Missouri has asked me the question. I did see—and I hope I shall be perfectly parliamentary—in the Washington Post yesterday morning a purported interview or expression from a distinguished Senator—Senator Smoot, of Utah—in which he is reported as saying that this bill was "a mass of absurdities," that it was intended "to hit as few voters as possible," or, in other words, that this bill was an absurdity from beginning to end; that the Ways and Means Committee, the 23 members, Republicans and Democrats, who framed it, in this crisis of our country, when this Government so urgently needs \$8,000,000,000 in taxes to help maintain itself in its present death struggle, wrote this bill, using practically every minute of three or four months of labor devoted to it, not with the interest of the Government and the country in their minds and hearts, but with the thought and purpose of getting more votes for themselves or their party in the coming election, and as a result of such labor and selfish intentions present as a bill a mass of absurdities. I do not give credence to such a report in the Washington Post or any other metropolitan paper; and for Senator Smoot, whom I know well and for whom I have great admiration, I want to deny that and say that such a statement did not come and could not come from any man worthy of a seat in the United States Senate, much less from as distinguished and able and courteous a gentleman as Senator Smoot is. He has been in the Senate for years; he knows the comity between the House and the Senate; he knows what courtesy should exist between the two bodies and between their respective committees and Members. It is impossible for Senator Smoot to have made such an unbecoming, I might say, almost brutal, remark with respect to a bill raising \$8,000,000,000 to help to win this war, a bill that is the result of the hardest labor, the most careful study and thought, and the most diligent research of which the Ways and Means Committee was capable—a committee consisting of 23 Members, Democrats and Republicans, of this House. I refute the assertion or imputation that Senator Smoot ever gave utterance to any such statement.

Mr. MOORE of Pennsylvania. Mr. Chairman, I do not want to make a point of order—

Mr. KITCHIN. I want to finish my statement. I deny that the Senator said any such thing.

Mr. MOORE of Pennsylvania. Perhaps it was unfair to the committee, but I think it is in order at this point to say, although I do not wish to make the point of order, that the gentleman is not proceeding in order when he reflects on a member of another body.

Mr. KITCHIN. Reflects! I reflecting! Why, the article in the Post is a reflection upon a Senator. I am exonerating, defending him against such reflection. I am simply saying that neither Senator Smoot nor any other Senator made or could make such a statement. [Laughter.]

Mr. MOORE of Pennsylvania. The gentleman having made that statement, I make the point of order that it is not in order in this House to mention the name of a Senator.

Mr. KITCHIN. I withdraw the name of Senator Smoot. If the friends of Senator Smoot do not desire me to exonerate him in the House from this unjust and unfair imputation in the Post—

Mr. MOORE of Pennsylvania. It is improper and out of order for the gentleman in the House to mention the name of a Member of the Senate.

Mr. KITCHIN. Oh, has it come to this, gentlemen, that the state of the Senate is such that it is unparliamentary and indecent to mention in this respectable body the name of a Senator? [Laughter.]

Mr. OLDFIELD. Will the gentleman yield?

Mr. KITCHIN. I yield for a question.

Mr. OLDFIELD. My understanding is, Mr. Chairman, from the question asked by the gentleman from Missouri, that this was a newspaper report?

Mr. KITCHIN. Yes.

Mr. OLDFIELD. I understand that if a Senator or a Member of the House makes a statement in the newspapers, not on the floor, that that statement may be criticized and referred to in either House. Is not that true?

Mr. KITCHIN. That may be true, but I am not criticizing.

Mr. OLDFIELD. I want to know if that is true.

The CHAIRMAN. That is true, as the Chair understands it. The gentleman will proceed in order.

Mr. MOORE of Pennsylvania. I understand the gentleman thoroughly.

Mr. KITCHIN. I have not criticized Senator Smoot. In my judgment he has said nothing worthy of criticism. I believe him to be incapable of saying what he is reported to have said.

Mr. OLDFIELD. If he said it, it was said to a newspaper reporter and it can be referred to here.

Mr. KITCHIN. I am a doubting Thomas. He has to come to me and say, "KITCHIN, I did say it," before I will believe it. I will tell you why Senator Smoot and no other Senator said—

Mr. MOORE of Pennsylvania. Mr. Chairman, I renew the point of order and insist upon it. I have no objection to the gentleman's refuting an article in the newspaper, provided he does not refer to a Senator of the United States by name.

Mr. KITCHIN. If it offends the House or any gentleman in the House, or any rule or custom or precedent of the House, to mention in courteous terms the name of a Senator, I shall not refer again to any name.

Mr. MOORE of Pennsylvania. That is all that is necessary.

Mr. KITCHIN. I will settle the matter. I promise the gentleman from Pennsylvania that I will not refer to the Senator.

Mr. MOORE of Pennsylvania. Very well. The gentleman can proceed and deny the statement in the newspaper.

Mr. KITCHIN. I will not refer to a Senator. I am very sorry the matter has been brought up. Since it is up, I repeat that no Senator could make such a statement. Such a statement could come only from a character who in times when there is nothing at stake before the people except political spoils, when the only issue is who shall divide out the offices, would shine the brightest, the most scintillating star in the firmament, but who in times like this, when the Nation has its life at stake, when the Government demands all that is in one's heart and soul and mind for the service of his country, would become a poor, pale, enfeebled, insignificant, and dimly flickering satellite, unable to emit light enough for its own little pathway. [Applause and laughter.] Certainly no Senator said it. [Laughter.]

Mr. KINKAID. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. KINKAID. Will the gentleman from North Carolina advise me whether the use of the word "mines," in subdivisions (b) and (c) of section 9, covers potash lakes, such as are found in Nebraska and elsewhere in the West?

Mr. KITCHIN. I am under the impression that it would cover potash, because potash is a mineral and, in a way, is mined.

Mr. KINKAID. As a placer mine?

Mr. KITCHIN. Yes. We are considering that proposition and desire to insert a provision that will take care of that, if this does not. I think it requires the consideration of the committee and the House. When we get to the five-minute rule for amendment we will try to have the proposition taken care of.

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GRAHAM of Illinois. There has been considerable comment in my part of the country at least about the discrimination between the way partnerships engaged in small business are treated under the present law and corporations. Can the gentleman tell me whether the income tax that is charged against individuals will just about compensate for the war-profits tax that is charged against corporations?

Mr. KITCHIN. The gentleman will observe that in this bill, on account of that very inequality or discrimination which exists under existing law, against individuals and partnerships in the same business, while not intended, in favor of corporations, we exclude partnerships and individuals from the excess-profits tax. Including paying the largely increased surtax and normal tax proposed in this bill individuals and partnerships, if we put them in the excess and war profits provisions, would in a large majority of cases pay a great deal more taxes in the same business on the same profit and on the same invested capital than corporations would.

Mr. SNOOK. Mr. Chairman, the gentleman referred in talking about the oil and gas business to the advisory tax board. Is this board of five intended to sit as a court?

Mr. KITCHIN. No; simply as an advisory board to the Commissioner of Internal Revenue. Questions will be referred to them, and they will make their recommendations to the commissioner.

Mr. VOIGT. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. VOIGT. Will this combination tax proposed by the committee raise as much money as the 80 per cent tax recommended by the Secretary of the Treasury?

Mr. KITCHIN. This will raise more. We will raise \$200,000,000 more on account of the increase in the excess-profits tax rates over that in existing law, which the Secretary urged us to retain. As I have said before, the Secretary and other Treasury officials heartily approve of the combination tax in the bill. We only differ as to the rates in the excess-profits tax provision.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. HARDY. Will the income tax on profits made by sales of property—real, personal, or mixed—apply to sales made before the passage of this law.

Mr. KITCHIN. The gentleman means if made in 1918?

Mr. HARDY. Yes.

Mr. KITCHIN. Yes.

Mr. HARDY. Whether made before or after this becomes a law?

Mr. KITCHIN. To profits on sales made in 1918; yes. The tax provisions of the bill apply to the calendar year 1918. It is made the first taxable year under the bill.

Mr. HARDY. What is the meaning of the second clause on page 3 of the print of the bill which is printed as House Document No. 1267 respecting inventory?

Mr. KITCHIN. The gentleman has been talking about the income tax, and our subject at present is the excess-profits tax.

Mr. HARDY. I beg the gentleman's pardon for getting out of place.

Mr. KITCHIN. I am not complaining. Is this what the gentleman refers to—

That whenever in the opinion of the commissioner the use of inventories is necessary in order clearly to determine the income of any taxpayer—

Is that it?

Mr. HARDY. So the gentleman will get my idea in mind, under (b), just above that—

In the case of property acquired on or after that date, (1) the cost thereof; or (2) the inventory value, if the inventory is made in accordance with section 202.

Mr. KITCHIN. That is the basis for determining gain or loss—

(a) In the case of property acquired before March 1, 1913, the fair market price or value of such property as of that date; and

(b) In the case of property acquired on or after that date, (1) the cost thereof; or (2) the inventory value, if the inventory is made in accordance with section 202.

Inventories are necessary in the case of merchandising and manufacturing concerns in order to determine gain or loss for the taxable year. It does not apply to isolated transactions, as where I buy a piece of land or a ship for \$100,000 and sell it for \$200,000. You have to have inventories to ascertain the profits in the mercantile and manufacturing and like businesses.

Mr. HARDY. These two methods, then, would not apply to land or to purchases straight out?

Mr. KITCHIN. No.

Mr. HARDY. But to certain cases of which the gentleman has spoken?

Mr. KITCHIN. Yes.

I was interrupted before I could finish my consecutive statement as to the war-profits tax. I will return to it now. As some gentlemen who are interested in the question have come in since, I will repeat some things I said this morning.

If in calculating under the war-profits method it be found that the prewar earnings or profits, plus 10 per cent on new capital put in since the prewar period, do not amount to as much as 10 per cent of the invested capital for the taxable year, the corporation is allowed under the bill a war-profit deduction of 10 per cent of the invested capital for the taxable year. If the prewar earnings or profits, plus 10 per cent on new capital put in since, exceed 10 per cent of the invested capital for the taxable year, the corporation is entitled to the amount of such prewar earnings or profits, plus the 10 per cent on new capital, as a prewar-profit deduction; but if in computing the tax under this method, with the 10 per cent minimum deduction, or the deduction of the actual prewar earnings or profits, plus the 10 per cent on new capital put in since, it be found that the tax would be less than in computing it under the excess-profits method, then the tax must be computed and paid under the excess-profits method, since that yields the larger tax.

We recommended this alternative system to catch corporations that would pay little or no tax under the war profits-tax method. The tax will have to be computed by both methods and then the tax will be paid according to the method that will yield the highest tax. Each corporation has, in addition to this deduction of so much per cent on its capital or of its prewar earnings, a specific deduction of \$3,000. That does not amount to much in the case of the larger corporations, but to the little corporations from \$5,000 up to \$50,000 capital it is a great benefit.

Mr. HAUGEN. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. HAUGEN. If they pay an excess-profits tax equivalent to the surtax and normal tax the other taxes—

Mr. KITCHIN. The surtax only applies to individual incomes.

Mr. HAUGEN. Suppose it is an individual.

Mr. KITCHIN. Individuals are excluded from the excess-profits tax, because the individual's income is subject to the income, normal, and surtax, and he would pay a great deal more tax than the corporation doing the same kind of business with same capital and making same profits if his income was also made subject to the war-profits or excess-profits tax. In most cases the normal tax and surtax paid by the individual are more than the income and excess or war profits tax paid by a corporation making the same profit or income.

Mr. BLACK. Will the gentleman yield on one point?

Mr. KITCHIN. I will.

Mr. BLACK. In removing the individuals and partnerships from the excess-profits tax provision, will that offer any inducement to corporations to surrender their charter and go in as individuals or partnerships?

Mr. KITCHIN. I think not.

Mr. BLACK. I was just wondering if it would.

Mr. KITCHIN. Some economists who have given some thought to the question and had some experience in the operation of corporate business think that it would not be a bad idea to induce a lot of small corporations to dissolve and go into partnerships or individual businesses. Certainly, if we had it the other way it would induce every individual and most every partnership, especially the large ones, to incorporate and to do business as a corporation instead of as an individual or partnership, which would be economically unsound and bad as a matter of public policy.

Mr. HAUGEN. The corporation is subject to excess-profits tax. Suppose a dividend has been declared and the individual is then subject—

Mr. KITCHIN. To the surtax.

Mr. HAUGEN. And he is caught.

Mr. KITCHIN. Yes; but he has to receive an income of \$5,000 and over to be caught with the surtax, because dividends are not subject to the normal tax of 12 per cent.

Mr. HAUGEN. But are subject to the surtax?

Mr. KITCHIN. Yes.

Mr. MOORE of Pennsylvania. Will the gentleman yield for a question there?

Mr. KITCHIN. Yes.

Mr. MOORE of Pennsylvania. In the judgment of the gentleman, who has done much figuring upon this question, which system—the alternative, the excess-profits, and war-profits tax, as understood and advocated by the gentleman, or the war-profits tax as it was originally suggested by the department—would raise the most revenue?

Mr. KITCHIN. The gentleman means a straight, distinctive war-profits tax with the 80 per cent rate we have in the bill?

Mr. MOORE of Pennsylvania. Yes.

Mr. KITCHIN. I would say that as I, as well as the committee, understood, the suggestion for a distinctive war-profits tax with an 80 per cent rate was made to the committee by Mr. Leffingwell, Assistant Secretary of the Treasury, and by the Secretary. Such a tax would probably raise more revenue for 1918 than any one method that has been suggested, but it would seriously cripple many businesses and, in my opinion, ruin some. In many industries that were suffering from depression during the prewar period the deduction would be entirely too low and the tax with such small deduction would be too high, and in 1919 and thereafter there would be much less income tax, and therefore less tax collections. But when you allow the reasonable and necessary deductions, as is provided in the bill, the alternative system, under the bill, will produce by far the larger amount of revenue. I should add that my understanding is that both the Secretary and Mr. Leffingwell approve the deductions and the alternative system in the bill.

Mr. MOORE of Pennsylvania. That being the opinion of the gentleman, which apparently was sustained by our committee, there remains now for the Treasury Department in the administration of this law the alternative of applying the excess-profits tax, as advocated by the gentleman from North Carolina, or the war-profits tax, as advocated by the Secretary of the Treasury, whichever produces the most revenue?

Mr. KITCHIN. I think, I am confident, that with the bill in its present shape we will produce more revenue by the alternative system in the bill, the war-profits and excess-profits methods, than either by the straight excess-profits tax which the committee in the first instance decided to incorporate in the bill or by a war-profits tax alone. The straight excess-profits tax at first tentatively agreed on by the committee would have produced more revenue than the suggestions first sent to the committee in typewritten form by the Treasury Department.

I will say, too, in this connection, that, while the metropolitan press has denounced, ridiculed, misrepresented, and condemned the committee, and especially its chairman, because the committee, as it claimed, would not follow the suggestions of the Secretary of the Treasury in writing into the bill a war-profits tax, such misrepresentation and denunciation being especially indulged in by the Wall Street Journal, the New York Times, and the New York World, the fact is—and it so appears in its hearings and records—that the committee had 10 days or two weeks before the war-profits telegram of Mr. McAdoo to me, or before he appeared before the committee, after finding that we could not get the amount of revenue from a strictly excess-profits tax without throwing too great a burden upon the smaller corporations, on motion of the gentleman from Georgia, Judge Clegg, decided to incorporate the alternative method now in the bill—the war-profit method or the excess-profits method, whichever would yield the higher revenue. Just think of the amount of printer's ink and print paper that, in these times of high-price print paper and ink, was lost in that two weeks of cartooning and denunciation and misrepresentation of us for not doing that which we had already done!

Mr. MOORE of Pennsylvania. If, therefore, it should appear that a large corporation should escape under the war-profits tax by reason of its prewar profits compared with postwar profits, then the excess profits would apply and it would not be permitted to escape?

Mr. KITCHIN. No. The gentleman is correct.

Mr. MOORE of Pennsylvania. Since many gentlemen who were not present when the gentleman from North Carolina was discussing the matter have inquired about this, may I be permitted in his time to call attention to section 301, on page 24 of this bill, which sets out this alternative plan?

Mr. KITCHIN. Surely. I explained that several times in my remarks this morning. But since there are many gentlemen here now that were not present then, I will be glad for the gentleman to read the section now.

Mr. MOORE of Pennsylvania. In section 301 it is provided:

That in lieu of the tax imposed by Title II of the revenue act of 1917, but in addition to the other taxes imposed by this act, there shall (except as otherwise provided in section 303) be levied, collected, and paid for each taxable year upon the net income of every corporation, a tax computed according to whichever of the two following methods yields the higher amount of tax in the case of such corporation: (a) The war-profits method specified in Part III of this title, or (b) the excess-profits method specified in Part IV of this title.

It seems to me, if the gentleman will permit, if Members of the House who are interested will refer to that section, they will get a full understanding of this alternative method.

Mr. STERLING of Illinois. I thought the question asked by the gentleman from Pennsylvania [Mr. Moore] gave a wrong impression, but I think this last section explains it. The Treasury Department would apply whichever method would produce the most revenue to each particular case. They will not apply

one method or another to the entire country, but will apply to each particular case that which will produce the most revenue in that particular case.

Mr. KITCHIN. Yes; that is correct. There are the two methods, the excess-profits method and the war-profits method, and computation will be made in case of every corporation by the two methods, and by whichever method the tax is larger the tax will be computed and paid under that method. Say that the tax computed in a given case by the war-profits method is \$100,000. They will then compute the tax by the excess-profits method; and say that the tax computed under that would be \$101,000, then the corporation, under the law, must pay \$101,000 instead of the \$100,000; or vice versa if under the war-profits method the tax computed was \$101,000 and under the excess-profits method \$100,000, it would have to pay the \$101,000, as that is the larger tax. Neither the Secretary of the Treasury nor any other man in the Treasury Department has any discretion at all. It is compulsory.

Mr. KINKAID. Then there is no legal discretion about it; it is mandatory?

Mr. KITCHIN. It is a matter of computation. It is mathematical and it is mandatory.

Mr. MAPES. Will that necessitate each corporation making out two returns?

Mr. KITCHIN. Not at all. They can do it very easily. All will go in on the same return.

Mr. DOREMUS. It will all go in one return.

Mr. KITCHIN. Yes. It is very easy. In ninety-nine cases out of a hundred the corporation making the return and the department can at a glance tell, without calculation, which method would yield the larger tax and, therefore, under which the tax would be paid.

We have taken care of the smaller corporations and provided a specific provision for this purpose. I discussed this before in answer to a question of the gentleman from Iowa [Mr. GREEN] but will repeat it here. You will find that the corporations that are now paying under the highest brackets are the little corporations of \$10,000, \$12,000, \$15,000 and \$20,000, and up to \$50,000 invested capital. A great many of these corporations now pay more than 40 per cent under the present law, and some 50 per cent of their total income, because their income depends not so much on the amount of capital invested—and having small capital their deductions are small—as on the personal activities of the managers and stockholders of the small corporation; so that we provide that in the case of a corporation with a capital stock that does not exceed \$20,000 the excess-profit or war-profit tax in no case shall exceed 35 per cent of its net income, and a corporation whose capital invested exceeds \$25,000 and does not exceed \$50,000 the excess-profit or war-profit tax shall in no case exceed 40 per cent of its total net income.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield for a question?

Mr. KITCHIN. Yes, sir.

Mr. HAUGEN. I understood the gentleman to say that the corporations are subject to the war-profits or excess-profits tax and not to the surtax, and the individuals and partnerships are subject to the surtax and not to the excess or war-profits tax. There seems to be quite a discrimination against one and in favor of the others.

Mr. KITCHIN. No; there is not.

Mr. HAUGEN. Take, for instance, a corporation with an excess profit of \$200,000. In that case the tax would be 80 per cent, or \$160,000.

Mr. KITCHIN. Under the war-profits method the rate is 80 per cent on all profits in excess of the deductions, and the deductions are dependent on the amount of prewar earnings and per centum of capital invested, but as to the excess-profits method you find the capital invested for purpose of the deductions and—

Mr. HAUGEN. After all the deductions have been made the tax is \$160,000, or 80 per cent on \$200,000. Suppose the corporation had declared a dividend of \$40,000. If the stockholder's income is \$40,000 he would be taxed with \$8,795 more, which would make it \$168,795. In the case of an individual with an excess profit of \$200,000 he is taxed only \$101,095, according to the tables here. I do not bring the matter up for the purpose of criticizing the bill, but to get an explanation of a seeming discrepancy, and if it exists to provide a proper remedy for it.

Mr. KITCHIN. On first reading of the tables in our report to which the gentleman evidently refers in his figures, one would be apt to get the impression of the gentleman, but an analysis of the provisions of the bill will dissipate such impression. The figures given by the gentleman are confusing and

misleading in their relation to the operation of the excess-profits tax under the bill and signify nothing, as the amount of excess profits and the amount of the tax are dependent upon other essential facts and figures which the gentleman in his proposition fails to give. No calculation can be made as to the amount of the tax unless the amount of invested capital and the per cent of profits on such capital be first ascertained, as the rates of the excess-profits tax are graduated according to the amount of profits—the per cent of profits—made on the invested capital. So the simple giving \$200,000 as the amount of excess profits means nothing as it relates to the amount of the tax. Two hundred thousand dollars may be the excess profits on 9, 10, 15, 20, 30, or 50 per cent or more of profits on invested capital; it may be the excess profits on a net income of \$400,000, \$800,000, or \$1,000,000, or more or less, or it may represent the amount of excess profits on a capital invested of \$500,000, \$1,000,000, \$10,000,000, or \$50,000,000, or more or less. As I said, the amount of excess profits and the amount of the tax are dependent solely on the amount of profits—the per cent of profits—made on the amount of invested capital. The rates are graduated according to the amount of per cent of profits made on capital invested. Both the amount of invested capital and the amount of per cent of profits must be ascertained before you can begin to calculate the tax. Let us take a case with the essential facts and see how the income and excess-profits taxes of a corporation work out in comparison with the income taxes—normal tax and surtax—of an individual and a partnership. Remember the partnership, as such, pays no tax, but each member of the partnership makes an individual return and includes in such return his part of the earnings of the partnership for the taxable year, whether distributed or not.

Now, take a corporation with \$2,000,000 of invested capital. If it makes a 10 per cent profit, or \$200,000, the figure given by the gentleman, it would pay an excess-profits tax of \$12,950 and an income tax of \$28,050, or a total tax of \$41,000, while an individual on a like amount of income or profits would pay, in income taxes alone, \$101,095, and the partners, in a partnership of two members, would pay in income taxes alone the sum of \$78,190. If it makes 15 per cent, or \$300,000 profits, the corporation would pay an excess-profits tax of \$47,950 and an income tax of \$37,807, or a total tax of \$85,757, while an individual making a like profit or net income would pay in income taxes alone the sum of \$165,095, and the members of the partnership would pay as income taxes the sum of \$140,190. If it makes 20 per cent, or \$400,000, the corporation would pay an excess-profits tax of \$97,950 and an income tax of \$45,307, or a total tax of \$143,257, while the individual on a like amount of net income or profit would pay in income taxes alone the sum of \$231,095, and the members of the partnership would pay in income taxes alone the sum of \$202,190. This calculation as to the excess taxes is under the excess-profits method, as the gentleman's proposition and question were directed to the excess-profits tax. The income tax of the corporation is computed on a 15 per cent rate basis, assuming that half its earnings would be distributed bearing the 12 per cent rate and half carried to surplus bearing the 18 per cent rate, under the bill, making an average of 15 per cent on the total earnings. Now, as to the taxes—the surtax—which the stockholders would pay on the dividend received by them, which is also raised by the gentleman's question. Dividends received are not subject to the normal tax, but only subject to the surtax. The amount of surtax paid by a stockholder, or whether he would pay any, would depend upon the amount of dividend he received and the amount of his net income. Many dividends would pay no surtax as the amount received by each shareholder would not be large enough or the net income of the shareholder would not be large enough to bring it within the surtax class. The surtax rates begin only on net incomes in excess of \$5,000, and is then graduated according to the amount of the incomes from 2, 3, 7, 10, 15, 20, 25 per cent, and on up to 65 per cent on the excess over \$5,000,000. Therefore it is impossible to make calculation as to the amount of surtaxes which would be paid on dividends, unless we knew the amount distributed to each stockholder, the amount of net income of each stockholder, and ascertain the rate, if any, each dividend would take. But including surtaxes on dividends the individual would in many cases, a majority of cases, pay more in income taxes alone than the corporation in income and excess-profits taxes. It is clear from the illustrations I have given relative to the large amount of income taxes to which individuals and partners are subject as compared to the income tax and excess-profits tax, combined, which corporations will pay, that it would be a cruel discrimination and injustice to individuals and members of a partnership to make them further subject to the excess-profits or war-profits tax.

It seems that in many cases, a large majority of cases, there is too large a discrepancy in the bill as it is between the tax on the incomes of individuals and the tax on the incomes of corporations. But the surtax on individual incomes is made large inasmuch as the profit on income of the individual is not subject to the excess or war profits tax, and the corporation's income is relieved from surtaxes, inasmuch as it is subject to the excess or war profits tax, and the dividends it distributes is subject to the varying rates of the surtax, if the income of the shareholder receiving it is in excess of \$5,000. One balances to some extent the other.

Individuals and partnerships were not made subject to the excess or war-profits tax for the reasons:

First. In 9 out of 10 actual cases the individual and members of a partnership, with the high normal tax of 12 per cent and the high graduated surtax, would pay in income taxes alone as much and in many cases more than the corporation would in income and excess-profits or war-profits taxes, and to subject them further to the excess or war profits tax would be too great a discrimination against them and in favor of the corporation.

Second. The extreme difficulty in the administration of the excess and war profits tax provisions in case of individuals, especially with respect to invested capital.

Third. Individuals and all their property and assets are responsible for all the debts and liabilities of the business; so, also, are the members of a partnership and the individual property of each member responsible for all the debts and liabilities of the partnership, while neither the owners of a corporation, its stockholders, nor their individual property are responsible for the debts or liabilities of the corporation or for the acts of its officers and agents.

Some gentlemen have asked me about the amortization proposition. You will find the amortization provision on page 37. It applies to individuals and to corporations for the purpose of computing net income for both the income tax and the excess-profits or war-profits tax. This provision gives great power of discretion to the Treasury Department, to the Commissioner of Internal Revenue, and the proposed advisory tax board. We must lodge that discretion somewhere. They can abuse it or they can use it in the interest of the Government or in the interest of the corporation; but it must be lodged somewhere, because Congress can not take up each one of the particular cases and fix a certain rule by which a building may be amortized. We can not do it. So we have to have faith in somebody, and we must assume and we do assume, and the committee have enough confidence in the Commissioner of Internal Revenue and in the gentlemen whom we believe will be on the advisory board to assume that they are going to exercise that discretion according to the spirit and intent of the act, and that in every case they are going to protect the Government. Now, let me read it:

(8) In the case of buildings, machinery, equipment, or other facilities, constructed, erected, installed, or acquired, on or after April 6, 1917—

The date of the declaration of war—for the production of articles contributing to the prosecution of the present war, there may be allowed a reasonable deduction for the amortization of the taxpayer, but not again including amounts otherwise allowed under the taxpayer, but not again including amounts otherwise allowed under this title for depreciation, exhaustion, or wear and tear. At any time within three years after the termination of the present war with the Imperial German Government as declared by proclamation of the President, the commissioner may, and at the request of the taxpayer shall, reexamine the return, and if he then finds as a result of an appraisal or from other evidence that the deduction originally allowed was incorrect, the necessary adjustment of the taxes for the year or years affected shall be made and the amount of tax due upon such readjustment, if any, shall be paid upon notice and demand by the collector, or the amount of tax overpaid, if any, shall be credited or refunded to the taxpayer in accordance with the provisions of section 252.

If he has overpaid, why, the money will be returned to the taxpayer; and if the taxpayer has underpaid on account of the amortization deduction he must pay the difference. Now, the committee thought that that would give unlimited discretion and power. The department could allow all the income of a corporation the very first year and with it amortize the cost of the expansion of a plant or other facility, and therefore the corporation would pay no tax. For instance, without being limited a corporation might put \$100,000 into improvements and buildings and make \$100,000 profit during the year, and the department could just allow the whole \$100,000 of net profit as amortization and say, "That goes to the cost of building. Mark it off and pay no income tax." But we did not think that would be done, as the department is now organized. But the present Commissioner of Internal Revenue may not always be the commissioner. The members now acting in the capacity of advisory board may not always be on that board. So we hedged it about by providing that—

In no case shall the deduction allowed under this paragraph exceed 25 per cent of the taxpayer's net income as computed without the benefit of this paragraph.

Now, that may possibly be enlarged or increased, but the committee thought there ought to be some reasonable limit to it.

It has taken an hour more on this title than I expected, because so many questions have been asked. I regret that on account of so many interruptions that were perfectly proper and appropriate, however, I was unable to discuss consecutively and orderly this important title.

I am going to hurry on now and take up the other different titles and give a bird's-eye view of each one of the titles.

As I said, experts estimate that from the excess-profits and war-profits tax we will raise \$3,200,000,000.

TITLE IV. ESTATE TAX.

Title IV relates to the estate tax. We have changed that very little from existing law except the rates. We have added a provision specifically including dower and curtesy in the gross estate. It was the intention of the framers of the original act that dower and curtesy should be included, and it is the opinion of the committee that the Treasury Department has correctly ruled in requiring them to be so included. We have extended the time for the payment of the estate tax and have reduced the interest chargeable on taxes not paid within a year and a half after the decedent's death from 10 to 6 per cent per annum.

Under existing law the due date for the payment of this estate tax is a year from decedent's death, and if the estate shall not have paid the tax within a year and 90 days of his death, interest at the rate of 10 per cent is added. We have changed that provision and made the interest 6 per cent, and instead of a year and 90 days we have extended the period to a year and 180 days, or a year and 6 months. If the tax is paid within a year and 6 months of decedent's death, then it pays no interest at all; and where the commissioner thinks it would be a hardship upon the estate, we have given him the power to extend the due-date payment 2 years, so that it would be 3 years and 180 days in cases that would be an exceptional hardship. That is very important and very necessary, for the reason that if some large estates had to close out and sell the property to pay the huge amount of the estate tax within the short time now allowed it would cause great loss; because within a year the market may be so that property worth a million dollars could not be sold for \$250,000, and in such cases as that the commissioner should have discretion to extend the time, and we have given that authority.

Mr. SMITH of Michigan. Under the present law if a person paid his tax before the expiration of the time limit he was allowed a certain little interest in the way of a rebate. There is no allowance now?

Mr. KITCHIN. No; because we have repealed the 10 per cent penalty clause and only charge a penalty of 6 per cent, which is no penalty, but regular interest rate. We have another very just provision, that if a person who receives a share of an estate dies within five years from the death of the person from whom he receives the estate, his share shall not pay another transfer tax within the five-year period. Under existing law a person might die to-morrow, leaving the gentleman from Michigan \$1,000,000, and the estate tax on the million dollars would be paid. Then the gentleman might die a week from that time, and his heirs, legatees, or devisees would have to pay on the same estate again. But we have provided that if the second man dies within five years after the death of the first one the estate pays no tax in the second case.

We retain the \$50,000 exemption in determining the net estate. In the first bracket we change the rate from 2 to 3 per cent. The next bracket is changed from 4 to 6 per cent, and it runs up until in the case of an estate exceeding \$10,000,000 we have increased the rate on the amount over \$10,000,000 from 25 to 40 per cent, a pretty good, healthy increase. We think when the estate tax gets into full operation it will raise about \$140,000,000 annually. This year it is estimated to raise about \$80,000,000. Of course, there will be no revenue yield from the rates provided in this bill this fiscal year unless some man dies in the meantime and the estate pays up within a few months after his death. But in the next fiscal year, 1920, it is estimated that we will raise \$110,000,000, and after two years we expect to raise \$140,000,000 annually from the estate tax.

Mr. SMITH of Michigan. That is, in addition to the tax imposed by the State?

Mr. KITCHIN. Yes. There will be no deduction on account of taxes paid to the State.

The following table compares the estate-tax rates imposed by existing law and the proposed bill:

	Rates on net estates under—	
	Existing law.	Proposed bill.
	Per cent.	Per cent.
Not exceeding \$50,000.....	2	3
Exceeding \$50,000 and not exceeding \$150,000.....	4	6
Exceeding \$150,000 and not exceeding \$250,000.....	6	9
Exceeding \$250,000 and not exceeding \$450,000.....	8	12
Exceeding \$450,000 and not exceeding \$1,000,000.....	10	15
Exceeding \$1,000,000 and not exceeding \$2,000,000.....	12	18
Exceeding \$2,000,000 and not exceeding \$3,000,000.....	14	21
Exceeding \$3,000,000 and not exceeding \$4,000,000.....	16	24
Exceeding \$4,000,000 and not exceeding \$5,000,000.....	18	27
Exceeding \$5,000,000 and not exceeding \$8,000,000.....	20	30
Exceeding \$8,000,000 and not exceeding \$10,000,000.....	22	35
Exceeding \$10,000,000.....	25	40

TITLE V. TAX ON TRANSPORTATION AND OTHER FACILITIES AND ON INSURANCE.

The next title is Title V. This includes the transportation and insurance taxes. These taxes are similar to the like taxes imposed under existing law. We have made practically no change in these taxes except that we have imposed a tax on freight shipped from without the United States into the United States from the point where it touches the United States.

The rates on passengers, freight, and express have not been changed on account of the increase in the transportation charge by the Government. We did not feel that it was exactly just to the shippers and consumers of the United States to make them pay a higher tax. We have made a change in regard to the rates on Pullman seats and berths from 10 to 8 per cent. That was done at the suggestion of the Director General for the reason that he wanted the passenger rates and Pullman berth and seat rates to be the same rate in view of the fact that they are now preparing to get out a combination ticket that contains the Pullman ticket along with the regular passenger ticket. We thought that instead of raising the passenger rate to 10 per cent we had better bring the Pullman rate down to 8 per cent.

We have increased the rate on pipe lines from 5 to 6½ per cent. We did that because as freight rates have been increased 25 per cent, 1½ per cent added to the 5 per cent we thought would about equalize the increase in the freight transportation charge.

Mr. LONDON. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. LONDON. How much will that yield in a year?

Mr. KITCHIN. Four million five hundred thousand dollars.

INSURANCE.

We make only a few slight changes in the special tax on insurance. The tax is left at 8 cents on \$100, the same as under the present law, except that we provide that in group insurance taken out by employers for the benefit of employees, when it covers at least as many as 25, the tax shall be only one-half of 8 cents, or 4 cents on each \$100, because their premiums are in that proportion, just about one-half of the ordinary single life policy.

We have made another change in the case of industrial insurance written on the monthly plan, as some companies are beginning to write it on the monthly plan. We provide that in the case of insurance taken out on the weekly premium plan the tax shall be 40 per cent of the amount paid for the first weekly premium, the same as under existing law, and in the case of insurance taken out on the monthly payment plan 20 per cent of the first monthly premium.

TELEGRAPH AND TELEPHONE.

We propose a rate on telegraph and telephone messages of 5 cents for every message from over 14 cents to not exceeding 50, and a rate of 10 cents for all such messages over 50 cents.

The bill provides a new tax upon the amount paid to any telegraph or telephone company for any leased wire or talking circuit special service equivalent to 10 per cent of the amount so paid. It is provided, however, that this tax shall not apply to the amount paid for so much of such service as is utilized (1) in the collection and dissemination of news through the public press or (2) in the conduct by a common carrier or telegraph or telephone company of its business as such.

The receipts from this title for a 12-month period are estimated as follows: Freight, seventy-five million; passenger, sixty million; Pullman, five million; express, twenty million; pipe lines, four million five hundred thousand; telephone and telegraph, sixteen million; and insurance, twelve million.

Mr. SLOAN. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. SLOAN. At what point do you find the exception from taxation of the insurance issued by the Government to the soldiers?

Mr. KITCHIN. Under the definition the United States is not a person and therefore not taxable on such insurance.

TITLE VI. TAX ON BEVERAGES.

This is a pretty important title to some of us, and most of us, and all of us, and then some. [Laughter.] This is the beverage tax—the hot beverage, the cold beverage, the hard beverage, and the soft beverage. We increased the tax on distilled spirits, used as a beverage, from \$3.20 to \$8 a gallon; distilled spirits used otherwise than for beverage from \$2.20 to \$4.40 a gallon; beer, from \$3 to \$6 a barrel. The wine tax is doubled. From these taxes—whisky, beer, and wine—for a 12-month period under these rates we will collect \$1,066,000,000. These rates seem pretty high, but we cooperated with the Treasury officials in getting the rates that would produce the largest amount of revenue, and both the committee and the Treasury Department decided that these rates would yield the greater amount of revenue.

We have put a tax on soft drinks contained in bottles and other containers and levied it on the basis of the manufacturer's selling price. We have abolished the tax on sirups and carbonic-acid gas, which seems to have been a myth and not workable. Now we get the entire tax in the tax on soft drinks. The tax on carbonated waters, such as sarsaparilla, coco-cola, pop, ginger ale, in containers will be 20 per cent of the manufacturer's price.

Of course, the producer or manufacturer will pass it on to the retailer and the retailer will pass it on to the consumer. Beverages that contain less than one-half of 1 per cent of alcohol are treated as soft drinks. They are so treated by the department now, and not as intoxicating or as alcoholic drinks. We make a distinction in cereal beverages, however. On drinks made from cereals, such as those known as Bevo in some sections of the country and in other sections as near beer, there is a 30 per cent ad valorem tax instead of 20 per cent, as on the other soft drinks.

In the revenue act of last session we missed many millions of dollars because we had not reached the point where we could find out exactly how to tax the largest quantity of drinks—those mixed at the soda fountains. There were so many ingredients that it was difficult. We have now worked out with the Treasury Department a plan that we think is workable and from which we will get many millions of dollars.

Where drinks are mixed at the soda fountain, the ice-cream stands, we levy a tax of 2 cents for each 10 cents or fractional part of the charge therefor, according to the amount paid. In the case of ice cream or any drink mixed at the soda fountain where the selling price of the mixer is 7 cents and less, the tax will be 1 cent. So, your children can still get their 5-cent ice-cream cones by putting up a nickel and 1 cent for the tax.

Natural mineral waters selling over 10 cents a gallon are now taxed 1 cent, and we increase the tax to 2 cents. Where it sells under 10 cents a gallon no tax is levied.

Mr. DYER. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. DYER. What was the reason which actuated the committee in putting a 30 per cent tax on some of the soft drinks and only 20 per cent on others, where they are sold at the same soda fountain and in the same way and for the same price?

Mr. KITCHIN. Not for the same price; sometimes a good deal higher.

Mr. DYER. That is the question that I want to ask the gentleman. I do not understand how that could have been arrived at.

Mr. KITCHIN. I will explain what actuated the committee. Some inside and outside of the committee, some inside and outside of Congress, desired to make it a great deal higher. I think 30 per cent is high enough. I think that tax is pretty high.

Mr. DYER. I agree with the gentleman.

Mr. KITCHIN. But the gentleman must understand that there are a great many people in Congress at this end and at the other end of the Capitol, and millions, I might say, of people outside of the Capitol, who think the tax ought to be 50 or 60 or 75 per cent, or, perhaps, 100 per cent. The public have got it into their heads—and by the public I mean the good folks, like myself, the prohibitionists—though I have not everything in my head that some prohibitionists have—that the cereal drinks, Bevo and near beer, take the place of beer. It looks like beer and tastes like beer, and is put up like beer and smells like beer, so they say. I never drank any of it in my life and don't know for certain.

Mr. DYER. Oh, the gentleman is mistaken.

Mr. KITCHIN. Well, the gentleman knows more about it than I do, but that is what a great many people think. Under-

stand I do not think all of the things that some of the good folks think. In a good deal of the dry territory there are what we call bootleggers. Some say speak-easies—they have different names in different sections of the country; and a good many people think that they use these soft cereal drinks, Bevo and near beer, merely to put on their shelves, and that when people come in to get these drinks, they are served with old-fashioned beer. They think the Bevo and near beer is a mere blind. There is a certain public sentiment—and I find some such sentiment in the House—that they all ought to go out of business, just like lager beer. I do not think so. We thought it was a pretty wise thing for us to put on the 30 per cent tax instead of running the risk of somebody coming in and putting it at 60 or 70 per cent, or some prohibitive rate. One of the real reasons was this: Such drinks, mere luxuries, are made out of cereals, food products, and in the opinion of the committee should pay a little more tax than a limeade or a lemonade, or other such soft drinks.

Mr. GORDON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. GORDON. I notice the estimate is made of about \$1,000,000,000 to be received from liquors, wines, and beer.

Mr. KITCHIN. The estimate of the experts for the twelve-month period under the provisions is \$1,066,000,000.

Mr. GORDON. This becomes effective when?

Mr. KITCHIN. This becomes effective just as soon as the bill is approved by the President. We hope by November, and we think it ought to be passed by October 15.

Mr. GORDON. Do you provide any alternative tax in case it should be made unlawful to manufacture these beverages like beer, wine, and so forth?

Mr. KITCHIN. No. We just considered the proposition as it stood, that as long as we had whisky, beer, and wine to tax, in drafting a revenue measure and as a committee dealing only with revenue, we would look at the proposition as if alcoholic beverages were not abolished or prohibited, because they exist now, and as long as they exist we wanted to put the taxes upon them that would yield the largest amount of revenue. I will be candid and say if prohibition goes into effect on July 1 next, which I think is proposed in the Senate amendment to the agriculture extension bill, that for the year beginning 1919 and ending June 30, 1920, we would have to go to some other source of revenue to raise about a billion dollars.

Mr. GORDON. Just one more question. Has the gentleman an estimate of the revenue from beer alone, or wine?

Mr. KITCHIN. Yes.

Mr. GORDON. Could the gentleman give the figures?

Mr. KITCHIN. Yes. Whisky for a 12-month period, November, 1918, to November, 1919, would yield \$760,000,000. Other uses of spirits, manufacturing uses, \$35,200,000. Rectified whisky, \$11,400,000, making a total of \$806,600,000 for spirits; fermented liquors, beers, \$240,000,000, making \$1,046,600,000; wines, \$20,000,000 more, making a total, as I said a while ago, of \$1,066,600,000 from spirits, beer, and wines. From these soft drinks, to which I referred, the estimates are that we will receive \$71,000,000, making for this title \$1,137,600,000.

Mr. PLATT. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. PLATT. I want to ask the gentleman whether it would be possible if a tax of 10 or 15 cents a pound, or something like that, were placed on tea and coffee to make up the difference of the tax now collected or that is estimated to be collected on spirits and wines and beer?

Mr. KITCHIN. Oh, no; it is impossible. For instance, take coffee. You hear so much about coffee and tea as revenue producers. Now, on the basis of the imports for the last three years a one cent a pound tax on coffee would not yield more than \$12,000,000, so that for every cent you put on coffee, according to the imports of the last three years, you get but \$12,000,000. Five cents on coffee only would bring about \$60,000,000, and 10 cents on coffee would only bring \$120,000,000, and I do not think anybody would think about putting a tax of 10 cents a pound on coffee. Now, for every cent on tea, we would get \$1,000,000, according to the imports of the last two or three years and 10 cents a pound on tea would amount to \$10,000,000, or 20 cents a pound on tea would get \$20,000,000, so you see a tax on coffee and tea would not fill up the first little hole in this billion dollars and over that will be lost in the revenue from beverages.

Mr. WALSH. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. WALSH. The paper this morning carried an item that an order had been issued, or was about to be issued, by the President prohibiting the manufacture of beer after the 1st of December, this year. What effect will that have upon the revenues provided in this bill if that order should be made?

Mr. KITCHIN. Well, we would lose at the rate of \$240,000,000 a year. If such prohibition goes into effect December 1, we would lose, according to the provisions of this bill, \$140,000,000 for the current fiscal year ending June 30, 1919, if that be true.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. COOPER of Wisconsin. I understood a little while ago the gentleman to use the expression "natural mineral waters." Now, Waukesha County, in my district, bottles millions of bottles of widely known drinking waters, White Rock and others. Some of it is carbonated and some of it is not.

Mr. KITCHIN. When it is carbonated the tax will be 20 per cent upon the bottler's or manufacturer's selling price. If it is natural mineral waters, not carbonated, it pays 2 cents a gallon, provided it sells for over 10 cents a gallon.

Mr. COOPER of Wisconsin. The use of the word "mineral" was what interested me.

Mr. KITCHIN. The language of the provision is "natural mineral waters or table waters."

Mr. COOPER of Wisconsin. Or table waters?

Mr. KITCHIN. Yes, sir.

Mr. COOPER of Wisconsin. This word "mineral" in that connection is not to me especially important, now that I am informed that the bill includes any bottled water used on the table.

Mr. KITCHIN. This is the language:

Upon all natural mineral waters or table waters sold by the producer, bottler, or importer thereof, in bottles or other closed containers, at over 10 cents per gallon a tax of 2 cents per gallon.

If you bottle and sell it by the bottle, whether mineral or not, it is natural, not carbonated, and the tax is 2 cents a gallon, if it is sold for over 10 cents per gallon.

Mr. LONGWORTH. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. LONGWORTH. In estimating the real amount that will be lost by the destruction of this source of taxation of which the gentleman has just been speaking, must not there also be included the amount that would be lost in the taxes on profits and incomes derived from that industry, and also the loss that would come to the various States by losing beverages as a source of revenue?

Mr. KITCHIN. All of those items would tend to make the total loss greater.

Mr. LONGWORTH. Has the gentleman made an estimate of how much that total loss would be?

Mr. KITCHIN. Some gentleman did ask the expert of the department, Mr. McCoy, to make such an estimate, and he made an estimate that the total loss in revenue would be about \$2,000,000,000, directly and indirectly. He estimated that the loss in the beverage tax on distilled spirits, fermented liquors, and wines will be \$1,066,600,000; that the loss from the special taxes on dealers, manufacturers, and so forth, the excess and war profits taxes, and the income taxes that would be paid by the individuals and corporations now engaged directly in the production, importation, distribution, and sale of beverages will amount to an annual loss of over \$400,000,000; and that the loss in income tax, through the increased State and municipal taxes—deductible in determining net income—that will have to be imposed by various States and municipalities on account of their loss in revenues by reason of prohibition, will amount to about \$600,000,000.

Mr. SNOOK. I notice in the papers this morning that the War Industries Board was about to issue an order to prevent the use of materials with which to make containers for these soft beverages, such as corks and things of that kind. Would not that materially reduce the revenue from beverages?

Mr. KITCHIN. Probably it would. Of course we had to take into consideration existing conditions, and we made our estimates of tax receipts under the various titles upon the basis that the conditions would continue as they had been in the past. Of course the War Industries Board and the price-fixing board have the power, or whether they have the power or not they assume the power, which nobody contests, of destroying a billion or more dollars of revenue which we would otherwise get. But we are hoping and believing and assuming that they will not so exercise their power as to materially reduce the taxes.

Mr. SNOOK. If they should issue an order of that kind which would stop the manufacture of containers, as the schedule was arranged, and all of these beverages commonly known as soft drinks are sold in bulk, would we still get the revenue?

Mr. KITCHIN. Yes; the tax would be at least 20 per cent of the producers', manufacturers', or bottlers' selling price. These beverages will have to be sold in some kind of con-

tainers. The bill provides "bottles or other containers," which would cover what the gentleman has in mind.

Mr. PLATT. I wondered if the gentleman could give any rough idea of from what sources, besides tea and coffee, we could get the billion dollars or so of revenue that now comes from spirits?

Mr. KITCHIN. Do you mean from customs imports?

Mr. PLATT. Could you get it from luxuries like silks and satins?

Mr. KITCHIN. I think we have covered substantially all the luxuries. When we come to that part of the bill I will mention some of them, and the gentleman will find that in the tax on the excess price of clothing and wearing apparel his suggestion is probably included. We will have to wait until we see the conditions existing when another revenue bill is written and supply new taxes to take the place of any source of revenue that may be abolished or prohibited, and if the manufacture and sale of whisky, beer, or any one of these subjects of taxation is prohibited, we would have to go elsewhere for more taxes. Any statement that I should make with reference to this matter would be a guess now, because the conditions may be different next year when we write another revenue bill, if one should be necessary. But I hope it will not be necessary to write another one during this war. We might get two or three hundred million dollars from tariff duties, but these would be, of course, consumption taxes. We might get something from a gross-sales tax, to be applied in addition to the taxes we have provided in this bill. This tax also would be practically a tax on consumption. However, it could be limited to the sales of certain articles. We might increase the income tax in the smaller brackets, as Great Britain is doing, and get from one hundred to two hundred million dollars more.

Mr. PLATT. You would not figure on more than \$200,000,000 or \$300,000,000 on tea and coffee at a higher rate?

Mr. KITCHIN. It is impossible to get that amount from tea and coffee. Probably it would be impossible to get half that amount.

Mr. CANNON. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CANNON. Beer seems to be condemned, the President having the power to stop the making of it entirely, and he has already reduced the alcoholic contents, and the Agricultural bill is to come to us with what is known as the Sheppard amendment, and so forth. Does this bill tax grape juice?

Mr. KITCHIN. Oh, yes, sir; 20 per cent.

Mr. CANNON. Twenty per cent on grape juice?

Mr. KITCHIN. Yes, sir; 20 per cent on the selling value?

Mr. CANNON. Does it tax cider?

Mr. KITCHIN. Yes, sir.

Mr. CANNON. What?

Mr. KITCHIN. Cider would be taxed 20 per cent.

Mr. DYER. Fresh cider or hard cider?

Mr. KITCHIN. I do not know so much about such a difference, but it is taxed 20 per cent.

Mr. CANNON. You say it is taxed 20 per cent?

Mr. KITCHIN. Yes, sir.

Mr. CANNON. That is, if a farmer makes a barrel of cider from his apples, worth \$2.50, would he pay a tax?

Mr. KITCHIN. Yes; if he carries it in a barrel or in a container—and I do not know how he could get it to a place without a container—he has got to pay 20 per cent, if he sells it.

Mr. CANNON. I have a recollection of cider from ancient times.

Mr. KITCHIN. You can recall the ginger cakes and cider you purchased when you were a boy in North Carolina.

Mr. CANNON. Yes, I know; and it was imported into Illinois and into Indiana and Ohio. Cider was made and put in a barrel, and it laid out in the air, and my recollection is that after two or three weeks—certainly in five or six weeks, as I remember when a boy—we would take a gimlet and bore through the staves of the barrel that contained the cider and insert a straw.

Mr. KITCHIN. Yes.

Mr. CANNON. It really has, I suppose, from 4 to 5 per cent of alcohol in it. Can we still make that cider?

Mr. KITCHIN. Well, you have put a mighty hard case to me. [Laughter.] If I were a judge on the bench and that case came up to me, or if I were Commissioner of Internal Revenue, or a member of the Advisory Board, and such a case as that were put up to me, on account of old times and the sentiment associated with the cider barrel and the straw I would hold that there is nothing in this bill that taxed that drink—"sucking cider through a straw." [Laughter.]

Mr. CANNON. Query: Grape juice can very easily be converted by the housekeeper from the grapes without great expense?

Mr. KITCHIN. Yes. If the housekeeper made grape juice from grapes from her vineyard or arbor, she would not be taxed. But if she put it up in barrels or kegs or jugs or jars or anything else and sold it to me, it would be taxed. But she would collect the tax from the purchaser. If she charged \$1 a gallon ordinarily, the price then would be \$1.20 a gallon.

Mr. CANNON. There is nothing in the bill so far, or in the amendment to the Constitution, if it is ratified, that would prevent the use of milk as a base with alcohol from being made into a drink for consumption, or grape juice or cider or a multiplicity of things, as, for example, rhubarb wine or elderberry wine?

Mr. KITCHIN. There is nothing in this bill to change that. If you can now take milk and mix a little whisky or other liquor in it and make a pretty good drink for your own use, there is no tax on that now, but if you mix it and sell it, you would pay the tax. I can assure the gentleman in a single sentence that there is nothing in the bill or the beverage title to which he will make any objection when he gets the bill and considers it carefully. There is nothing in the bill that curtails in the least the rights, privileges, and liberties of the gentleman from Illinois. [Laughter.] You have only to pay a little more for a quart, or a gallon, or a glass, or a keg, or a barrel; and when you do that you are putting just a little bit more money into the Public Treasury to help finance the war.

Mr. CANNON. If you put it in a keg to sell it, all right. But any family can take a barrel with cider in it, and after the lapse of a little time it will have 6 per cent alcohol in it. There is nothing in this bill that will tax that?

Mr. KITCHIN. We make no change in the administration of the law or in the meaning or definition of what is an alcoholic drink or beverage. If anyone can make these beverages under existing law, he can make them under this bill if it becomes a law, but the sale of it will be taxed. I will suggest to the gentleman from Illinois that he had better not give away all the things the housekeeper can do, and tell the Congress and the people and the antiprohibitionists how to get around the drink law; how, after we get prohibition, you can take milk or something and a little something else and mix them together and produce just as good a drink as we ever had before; because it might lead us to change this bill and add something there to keep the old lady from making her alcoholic beverages. Let it stay as it is. [Laughter.]

Mr. CANNON. As a matter of fact, if everything that ferments or contains alcohol is taxed, it seems to me we would be able to get a billion dollars by taxing it. But this bill does not tax them.

Mr. KITCHIN. We are taxing the sale of all kinds of drinks. The tax laws with respect to what is whisky and beer and other alcoholic drinks are not changed. The definition of alcohol, beer, or distilled spirits is not changed in this bill. The bill simply increases the tax and otherwise the existing law remains the same as to what constitutes these subjects of taxation.

TITLE VII. TAX ON CIGARS, TOBACCO, AND MANUFACTURES THEREOF.

We come now to Title VII, which relates to cigars, tobacco, and manufactures thereof. This is the cigar, cigarette, tobacco, and snuff schedule. I can say just in a word that we have doubled, with the exception of one or two brackets as to cigars, the entire tobacco schedule relating to cigarettes, cigars, snuff, and smoking tobacco. On what we call the "stogie" we only increase that tax from \$3 and \$4 per 1,000, according to retail price, to \$5 per 1,000. The tax on the cigar known as the 5-cent cigar is, therefore, not doubled. On all other cigars we have doubled the tax. We have doubled the tax on cigarettes and made one differentiation. Cigarettes made to retail for 2 cents and over apiece are taxed \$5.10 a thousand; all other cigarettes, \$4.10 a thousand.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Let me get through with this, and then I will yield. From this tax it is estimated by the experts we will receive \$341,204,000. In my opinion, if conditions remain as they are now, we will get more than that. We are now raising about \$212,000,000 from these sources under the existing law. The experts estimate that as taxes double, consumption will decrease; but that has not been the experience, especially in cigarettes. We increased the tax on cigarettes from \$1.25 to \$2.05 a thousand, against the protest of cigarette manufacturers and gentlemen in the House and in the Senate from tobacco-raising States, who declared that consumption would so decrease under that tax that we would not get anything like as

much revenue as we were getting under the \$1.25 tax. But instead of consumption decreasing the consumption of cigarettes has increased by the billion during the time this tax has been in force.

Mr. BORLAND. This title, which embraces sections 700 to 703, provides—

That upon cigars and cigarettes hereafter manufactured in or imported into the United States—

The tax would not apply to cigars now manufactured and in stock?

Mr. KITCHIN. Yes. We have a saving clause there.

Mr. BORLAND. Where is that?

Mr. GARNER. It is a saving clause in the back of the general law.

Mr. BORLAND. What is the provision of that general saving clause?

Mr. KITCHIN. It refers to stock on hand—the floor stock.

Mr. BORLAND. It would not be the case, then, that the small manufacturer of cigars who manufactures his stock almost weekly for his trade would be caught by this law, but the big manufacturer with stock on hand for a year's trade would escape? That would not occur?

Mr. KITCHIN. When the tobacco, cigar, or cigarette is sold the manufacturer or importer would pay the tax. The merchant, wholesaler or retailer, would pay the tax on the stock he had on hand at the passage of the act.

Mr. BORLAND. They are absolutely equal under this bill?

Mr. KITCHIN. Yes; the taxes are absolutely equal under this bill.

Mr. BORLAND. Because, as the gentleman knows, there are a large number of cigar manufacturers who manufacture almost daily.

Mr. KITCHIN. Yes. We had representatives of the trade before us, and, like most other people, they preferred that the tax be not raised quite as high as we did; but they were patriotic enough to realize that the tax ought to be increased, and they said they would stand the tax and do the best they could.

Mr. BORLAND. The question is whether there is any discrimination between the big manufacturer with the large stock on hand and the little fellow.

Mr. KITCHIN. No. We rather removed possibility of a discrimination. We cut out all exemptions as to floor stock on hand on the day of the passage of the act.

Mr. GOOD. Will the gentleman yield?

Mr. KITCHIN. Yes; I will yield.

Mr. GOOD. I have been looking over the debate that took place when the war-revenue bill of 1898 was under discussion here on the floor of the House, and I have been particularly struck with some of the items that were suggested at that time by the Democratic side of the House as a means of raising the desired revenue.

Mr. KITCHIN. Oh, I admit that this side of the House 20, 25, 40, or 50, or 100 years ago used to make some mighty unwise suggestions. Go ahead.

Mr. GOOD. I want to inquire just exactly how far the committee that has been considering this bill went into the question of those things that were suggested at that time as the proper sources of revenue, when the gentleman's entire party, with the exception of six Members, voted against the bill because it did not contain two things, namely, the coinage of the seniore in the Treasury and the issuance of legal-tender greenbacks in unlimited amounts. At that time, if the gentleman will just bear with me for a moment—

Mr. KITCHIN. Yes; I will bear with you. I am glad to get a rest.

Mr. GOOD. Mr. Bailey, of Texas, one of the leading Democrats of the House, said:

We have an asset in the Treasury of more than \$42,000,000 which we will place at your disposal. We are not only directing the Secretary of the Treasury to coin the seigniorage in silver dollars but we will authorize him to anticipate that coinage by issuing silver certificates to defray the expenses as they are incurred. [Applause on the Democratic side.] If that is not sufficient—and according to your estimate it will not be—we will go further, and we will authorize the Secretary of the Treasury to provide the balance of the \$100,000,000, which you say is immediately necessary, by issuing \$58,000,000 of United States legal-tender notes. [Applause on the Democratic side.] (CONGRESSIONAL RECORD, vol. 31, pt. 5, p. 4302.)

Then the present Speaker of the House [Mr. CLARK of Missouri], said:

We say we are willing to vote every dollar necessary to carry the war to a speedy and successful conclusion, but that a bonded debt is not necessary, and we offer to coin the \$42,000,000 silver seigniorage now in the Treasury, to vote \$150,000,000 in full legal-tender greenbacks, etc. * * * But here we have \$42,000,000 of idle silver in our Treasury. Why do you not coin it? Why do you not? Are you so afraid of your masters that you dare not use your own?

Now, by the report of the present Secretary of the Treasury there is \$10,478,643.24 of seigniorage now in the Treasury. I would like to ask the gentleman if any consideration was given by the committee to the question of coining that seigniorage and if any consideration was given by the gentleman's committee to the proposition of putting the printing presses in operation, as was suggested by the gentleman's party during the Spanish-American war and turning out greenbacks for the payment of the expenses of the war.

Mr. KITCHIN. The interjection of the gentleman's remarks is not at all pertinent to the issues involved in the bill, and I do not think a reply to the gentleman is material here. All I have to say is that what the gentleman has read simply shows that some Democrats—and it seems that practically all of them agreed then with Mr. Bailey and Mr. Clark—in this House 20 years ago did not have any more sense than some Republicans in the House have now. [Laughter.]

Mr. GOOD. Would the gentleman include the present Speaker of the House in that class?

Mr. KITCHIN. No. I will just let that remark stay and go on. I am satisfied. I hope the gentleman is.

Mr. GOOD. I am entirely satisfied.

Mr. KITCHIN. All right.

TITLE VIII. TAX ON ADMISSIONS AND DUES.

Title VIII is the tax on admissions to places of amusement, and so forth. In a word, we have simply doubled the tax on admissions to theaters, circuses, and moving-picture shows. That is the only material change we have made in this title. From that the experts say we will raise at the increased rates \$100,000,000 instead of \$50,000,000, the estimated revenue yield under the present law from these taxes. However, we still keep the exemption as to children 12 years old and under, and they pay only a penny tax, whether they go to moving-picture shows or any other performance or entertainment, regardless of the price of admission. If the maximum charge to any place of amusement is not to exceed 7 cents, the tax will be only 1 cent. We have also added a provision catching what they call the theater-ticket scalper, the man who sells theater tickets at the news stands of hotels for the theaters in his city. If a ticket is sold in that way for not to exceed 50 cents in excess of the regular established charge plus the tax, which is 2 cents on every 10 cents or fraction thereof, such vendor shall pay 5 per cent of the amount of such excess; not collected out of the person to whom he sells it, but shall pay it himself—the 5 per cent of the excess. If that excess is more than 50 cents, if his charge to the man who buys from him is more than 50 cents in excess of the regular established charge and the tax, he, the seller, is to pay 30 per cent of the total excess. For instance, if the established price of a ticket to the theater is a dollar and he buys it from the theater, the proprietor of the theater makes him pay \$1 for the ticket plus a 20 per cent tax, which would be \$1.20. If he sells that ticket to a person for \$1.70, adding 50 cents, he himself will have to pay 5 per cent of that 50 cents excess that he has charged. If he sells that ticket for \$2 instead of \$1.70, which would be 80 cents in excess of the price he paid plus the tax, he would have to pay 30 per cent of the 80 cents of the total excess. And we have a provision that if the proprietor of a theater, his agent, or employee sells a ticket at a price in excess of the regularly established ticket-office price he must pay 50 per cent of the excess.

TITLE IX. EXCISE TAXES.

Now, as to the excise tax. Automobiles, player pianos, graphophones, tennis rackets, sporting goods, and jewelry, and so forth, are retained in this bill as subjects of an excise tax, and we have added a large list of luxuries or semiluxuries to the list included in the present act. I am going to mention some. We have included pianos and pipe organs. They are not in the existing law. We have added candy, firearms, shells and cartridges, except those sold to the Federal Government or to State governments or our allies. On pistols, for instance, we have put a 25 per cent tax. On dirk knives, metallic knuckles, sword canes, and so forth, we have put a tax of 100 per cent. Perhaps it should have been 500 per cent, but I will say to the distinguished gentleman from Illinois that some of us old-time Democrats did not believe much in using the power of taxation to destroy. If, however, it was ever justified, it would be in this case.

We have included electric fans, thermos and thermostatic bottles, carafes, jugs, or other containers; tapestries and textiles for furniture coverings or hangings in the interior decorations of buildings; cigar or cigarette holders and pipes, composed wholly or in part of meerschaum or amber, humidors, and smoking stands.

All these will bear a tax of 10 per cent on the manufacturer's selling price. We have increased the tax on automobiles, piano players, graphophones, and so forth, in the existing law from 3 per cent to 10 per cent, only we provide that motor trucks shall pay but 5 per cent.

Mr. SMITH of Michigan. That is, a tax on the sales?

Mr. KITCHIN. Yes; we have also a license tax on automobiles based upon the horsepower.

Mr. BLANTON. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BLANTON. In regard to pianos, is there a license tax on those already owned?

Mr. KITCHIN. No; only an excise tax on the sales made hereafter.

In regard to the jewelry, we have changed that tax somewhat. It is now 3 per cent on the manufacturer's selling price. That does not catch what we want and what the public wants and what the Government wants. We have changed that to a tax of 10 per cent on the retail price. The jewelers' associations, both retailers and manufacturers, have said that if we are going to have a high tax they prefer to have it on the retail price. We have changed it from the manufacturer's price to the retail price because it is practically as easily administered and we will collect a great deal larger amount. We make an exception where the person or business does not sell in excess of \$200 worth of jewelry. There are over 1,000 different articles in the jewelry schedule under the bill. The person or business that sells less than \$200 in a year is exempt, because the administration of the tax in the case of small sales would be too difficult, as practically every merchant, big or little, sells some articles in the jewelry schedule.

Mr. CANNON. As I understand it, the tax is not levied on the manufacturer of jewelry at all nor on the maker when he sells it.

Mr. KITCHIN. No; not on the manufacturer.

Mr. CANNON. Does the gentleman think that that will necessitate a small army of experts and agents and inspectors?

Mr. KITCHIN. No; the department said it would not be costly of administration, because while there are many thousands it will not be any more than the administration of the law with reference to drug stores in the sale of medicine, and so forth; they would make their monthly returns just as druggists do now, or automobile manufacturers.

Mr. CANNON. Could they have a stamp tax?

Mr. KITCHIN. The retailer will make a monthly return under oath of his sales and pay the tax upon the basis of the return.

Mr. WALSH. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. WALSH. Are bicycles included in this list?

Mr. KITCHIN. I do not think the attention of the committee was called to bicycles. We left them out last year when we wrote the bill, because they were not considered a luxury, so much of a luxury as automobiles and motorcycles. They were used more by laboring people going to their place of work, and by telegraph messenger boys—used more as a necessity, except a very few children's pleasure bicycles. We regarded them more in the light of necessity for the poorer people.

Mr. WALSH. Does the gentleman think the same reason would apply now and exempt them from paying a tax?

Mr. KITCHIN. They could pay a tax, but still I think they can be regarded rather a necessity than a luxury.

Mr. WALSH. No more than a railroad ticket or a freight receipt.

Mr. KITCHIN. They are consumption taxes and borne equally by all classes of people, and a small tax on them yield large revenues. I think that bicycles would not be an unjust subject of taxation.

Mr. TREADWAY. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. TREADWAY. Is not this schedule very largely one containing articles of luxury, whereas the bicycle is in a class, as the chairman has said, of necessities? It is used very little for pleasure purposes.

Mr. LONGWORTH. I think it might be well to send the gentleman from Massachusetts out on a bicycle for 4 or 5 miles into the country and then ask him if he considers it a luxury. [Laughter.]

Mr. TREADWAY. Oh, I have had a great deal of pleasure on a bicycle, especially in the country where I live, and there is no better country for exercise on a bicycle than western Massachusetts.

Mr. KITCHIN. On proprietary medicines, cosmetics, and perfumes there is now a tax of 2 per cent on the manufacturer's selling price. If we keep the high tax of 10 per cent of the manufacturer's price on jewelry, cosmetics, and proprietary

medicines, we would have to catch the floor stock of thousands and thousands of merchants throughout the country, for the reason that 10 per cent would be a pretty good item to overlook. We would have to catch the floor stock of all these articles on hand. The schedule of cosmetics, proprietary medicines, and so forth, embraces hundreds of articles. The manufacturer, the producer, the druggists, retail and wholesale, all joined in the request that we put the tax upon the retail sale, the purchaser paying it directly. We have provided in the case of drugs and medicines, and so forth, a tax of 1 cent on each 10 cents or fraction thereof upon any article in that class, the tax to be paid by the purchaser. The retailer has to collect the tax from the purchaser, and it may be done by putting a stamp upon it, so that the purchaser will know exactly what he is paying. The department will make rules and regulations as to its collection. The purchaser will pay the tax at the time he purchases the article just as he does when he purchases a ticket for a moving-picture show.

Mr. GREEN of Iowa. And it was my opinion in that connection that it was considered that it would not cost the consumer so much.

Mr. KITCHIN. Yes; because the consumer would know exactly what he was paying and the seller could not cover up the tax in an increase in price much larger than the tax.

Mr. GREEN of Iowa. He would know just how much the tax was and he would not be told that the tax had raised the price up to such and such an amount.

Mr. KITCHIN. We considered that there were many articles under the head of cosmetics and of proprietary medicines that were in the nature of necessities to a great many people, and we wanted the consumer to know exactly what he was paying therefor; how much the increase in price was on account of the tax.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. COX. I want to ask a question about the automobile tax. In section 900, paragraph 2, there is an automobile tax of 10 per cent provided, to be levied on the manufacturer.

Mr. KITCHIN. Yes.

Mr. COX. I call the gentleman's attention to section 1000, which levies a special tax upon an automobile in the hands of the owner.

Mr. KITCHIN. Yes.

Mr. COX. My query is this: Whether or not in placing both those taxes the committee took into consideration the equality of tax placed upon the manufacture of an automobile and that placed upon the owner of it?

Mr. KITCHIN. Those two sections have no relation to each other. One is a manufacturer's sale tax of 10 per cent and the other is a license tax similar to that levied in three-fourths of the States.

Mr. COX. I do not think I made myself plain. Will the tax be about as much upon the owner of the machine, a man who already has a machine, as it will be upon the man who buys one?

Mr. KITCHIN. No; because the man who purchases a new machine will have to turn around and take out a user's license. Mr. COX. And he is subject to a double tax?

Mr. KITCHIN. Yes. For instance, if Mr. GARRETT has an automobile and he pays, say, \$25 tax, and the gentleman from Indiana [Mr. Cox] buys the same kind of automobile, he pays a 10 per cent manufacturer's tax, and then has to pay also a license tax of \$25 similar to that which Mr. GARRETT had paid.

Mr. CANNON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CANNON. My county of Vermillion, in the State of Illinois, has voted one million and a half dollars for good roads. They are about two-thirds constructed, but are now stopped because in these times we can not complete the construction of the roads. The legislature of my State will put to a vote in a short time, and I think it will be adopted, the question of an issue of \$60,000,000 as a State bond issue, to be paid for by taxes upon automobiles. Every city in my State has the power, and many of them have exercised it, of licensing automobiles, some of them quite heavily. I have not read the provision for the taxing of automobiles, but how far would it tend to discourage a State that is in the mud practically for three months of the year from perfecting its good-road system?

Mr. KITCHIN. If we did not levy this user's tax in the gentleman's State, the State would have just that much more that it could put onto the license that it itself levies, but as far as the nonuse of automobiles is concerned, I do not think there will be any. I do not think this tax, added to a State license tax, will stop the use of a single automobile in the United States. If a man has a machine he is going to use it,

even if he has to pay a big price to do so. The committee thought—and I think—that this is rather a high tax, but it is a tax that the automobile owner can pay, and we will get \$73,000,000 revenue from it, and that \$73,000,000 will come from the parties who own automobiles, and will really come from a tax source in the nature of a semiluxury, and we thought we had better get the \$73,000,000 that way than go into some actual consumption taxes.

Mr. CLARK of Pennsylvania. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. CLARK of Pennsylvania. I desire to ask if this tax is laid upon the horsepower and not upon the value. Is it irrespective of the value?

Mr. KITCHIN. It is levied upon the basis of the horsepower and irrespective of the value. We considered every kind and method of automobile license taxation. We found that four-fifths of the people who owned automobiles were accustomed to pay according to the horsepower, and finally concluded the horsepower basis was the wisest.

Mr. CLARK of Pennsylvania. They are paying once on the basis of the horsepower in the State.

Mr. KITCHIN. We adopted the same tax basis, because the people were accustomed to the horsepower tax basis in most all of the States and a tax on this basis is easier to administer than one levied according to the price or value.

Mr. CLARK of Pennsylvania. It is certainly easier to collect on the horsepower than on the value.

Mr. KITCHIN. The people are accustomed to that kind and way of paying an automobile license tax.

Mr. CLARK of Pennsylvania. That does not seem to me to be exactly equitable.

Mr. KITCHIN. There are some inequities in it, there is no doubt about that. There are some inequities in any basis.

Now, I want to call your attention to a class of luxuries we tax, not because in themselves they are luxuries but because they become luxuries when sold above a fixed price. I know if I buy a tennis racket I am buying a pure luxury, but when I buy a suit of clothes or a hat it is a necessity, but it can become a luxury by the price. We made a distinction in this class of articles by fixing the price above which price a tax should be paid upon the excess—for instance, carpets and rugs, on the amount in excess of \$5 per square yard. Well, now take an oriental rug. That is purely a luxury, whereas a rug that costs \$40, \$50, or \$60 might not be. Rugs are a necessary piece of household furniture or equipment, but they become a luxury according to the price paid. So we have levied a tax of 20 per cent, not on the whole price but on the excess over a certain amount fixed in the bill—for instance, on carpets and rugs on the amount in excess of \$5 per square yard. At \$6 per square yard the buyer pays 20 per cent upon the \$1 excess; picture frames, on the amount in excess of \$10 each. If a frame costs \$15, the buyer pays only 20 per cent on the additional \$5. Trunks, on the amount in excess of \$50 each. Generally a person who pays over \$50 for a trunk can pay the tax on the excess; if he buys it for \$60, he pays 20 per cent on the \$10 excess.

Valises, traveling bags, suitcases, hat boxes used by travelers, and fitted toilet cases are taxed on the amount in excess of \$25 each; purses, pocketbooks, shopping and hand bags on the amount in excess of \$7.50 each; portable lighting fixtures, including lamps of all kinds and lamp shades on the amount in excess of \$25 each; umbrellas, parasols, and sunshades on the amount in excess of \$4 each; fans on the amount in excess of \$1 each; house or smoking coats or jackets and bath or lounging robes on the amount in excess of \$7.50; men's waistcoats sold separately from suits on the amount in excess of \$5 each; men's and boys' suits or overcoats, not including uniforms of officers in the military or naval forces of the United States, on the amount in excess of \$50 each; women's and misses' suits, cloaks, and coats on the amount in excess of \$50 each, or, when made up by a tailor or a seamstress, on the amount in excess of \$50 in value each. It strikes you hard, gentlemen, but you will have to bear it. [Laughter.] Well, I need not go through the whole list, but the various items will be found in the bill, under section 905.

Mr. SMITH of Michigan. Will the gentleman yield for a question?

Mr. KITCHIN. I will.

Mr. SMITH of Michigan. That is if a suit of clothes cost \$65 there would be paid the tax of 20 per cent on the excess above \$50?

Mr. KITCHIN. On the \$15, yes; a tax of \$3.

Mr. SMITH of Michigan. Thank you.

Mr. KITCHIN. Here are men's shirts, 20 per cent on the amount in excess of \$3 each. No man during war times ought

to be wearing a shirt that cost over \$3. I never wore one in my life costing over \$1.50—I bought mine before the price went up—and I think that is getting along pretty well. [Laughter.] You take the gentleman from Oklahoma over there, and if he wears his \$5 and \$6 and \$8 silk shirts, why he ought to pay 20 per cent on the excess over \$3. Our experts estimate that the excise tax under this title will raise \$517,305,000 during a 12-month period. It pays to have an excise tax like that. It will break nobody, hurt nobody, injure no industry. The only gentlemen we have heard protesting are the automobile gentlemen, and I think they are reconciled to the fact that they can pay—their purchasers can pay.

TITLE X. SPECIAL TAXES.

And now the next are the special taxes. In most cases we double the special taxes. We have made some exceptions in which we have more than doubled them. For instance, the stock broker is now taxed \$30 and we have made it \$100, but if he belongs to a stock or produce exchange or board of trade, where produce or merchandise is sold, in which the cost of membership is over \$5,000, he pays \$250. If the cost of such membership is more than \$2,000 and not more than \$5,000, he pays \$200. If not more than \$2,000—that is, in small exchanges throughout the United States—he pays only \$150. I understand there is not any loud or long or large protest against such graduation.

Mr. HASTINGS. I would like to invite the gentleman's attention to provision 1 of Title X, and to that part which says that "a tax equivalent to \$1 for each \$1,000 or so much of the fair average value of the capital stock for the preceding year ending June 30." Who determines the fair average value? For instance, here is a corporation that is, say, incorporated for \$50,000. Under this subdivision you deduct \$5,000 from it, leaving \$45,000. How would you arrive at the fair average value?

Mr. KITCHIN. I was going to come to the corporation capital stock tax.

Mr. HASTINGS. I thought you had reached that.

Mr. KITCHIN. We have made a very important change in the rates and in the exemptions in what is known as the corporation capital stock tax that has been on the statute books for two years. The tax now is 50 cents on each thousand dollars "of so much of the fair average value of its capital stock" for the preceding year as is in excess of \$99,000. "The fair average value of its capital stock" is the language of existing law and is carried in this bill. We make the tax \$1 on each \$1,000 of the "fair average value" of the stock in excess of \$5,000.

Mr. HASTINGS. I did not understand the words "fair average value" had been carried in the present law.

Mr. KITCHIN. Yes; it is in the present law.

Mr. HASTINGS. I have found it just now in the present law; yes. But I did not know before that it was in the present law. I understand that the Treasury Department, for instance, in reference to bank stock, finds that if the bank, for instance, made 8 per cent that that would be worth par, and they make the value of the stock upon that 8 per cent basis.

Mr. KITCHIN. My understanding is they do not have a hard-and-fast rule for that. The profit made is one of the elements. If it has no market value, if the stock has not been exchanged and sold, which would be some evidence of its value, they can use the per cent of profits earned as one of the elements in arriving at the value.

Mr. HASTINGS. Well, whether any stock has ever been sold at all or not, they use that as a basis.

Mr. KITCHIN. I did not know that; but they could use its earnings as an element in determining its real value.

Mr. HASTINGS. I will say that they find that bank stock west of the Mississippi River that makes 8 per cent worth a par value of \$100, and if it makes 12 per cent they find it is worth \$150. In other words, they tax them on the basis of \$150 instead of \$100.

Mr. KITCHIN. The gentleman may be right, but I hardly think it should be an exclusive basis. Of course, if you find that a bank, an established concern, has been paying 8, 10, or 15 per cent each year for a number of years, it is some evidence of its value. As I said awhile ago, it would be an element, and a strong one, for a basis in arriving at its value. But they would take into the consideration the surplus on hand; also the value of its assets. They would also consider what the stock had been selling at. If it had a quotable market value, they would consider that. I do not think they ought to make a hard-and-fast rule as to the annual per cent of profits.

Mr. HASTINGS. I will say to the gentleman that it is a hard and fast rule, established by the Treasury Department under existing law, for the past year.

Mr. KITCHIN. I have just examined one of the new capital stock tax forms. In it the capitalization of earnings is based upon the percentage of earnings necessary to maintain the stock at par in the particular section of the country in which the taxpayer is located; for example, it might be 10 per cent in one place, 8 per cent in another, and 12 in another. We have added some new special taxes. I think we have added one that the gentleman from Massachusetts [Mr. TREADWAY] is better acquainted with than I am, and that is a special tax on the business of operating the "rubbernecks," sight-seeing cars; that is, cars whose passenger capacity is more than seven passengers. We charge 10 per cent of the amount collected. A person going to the city on a sight-seeing trip does not consider it a necessity but pure pleasure to ride in these cars, and why not let them pay this 10 per cent just as well as the person pays who wants to go to a "movie" or buy a soft drink or indulge in other luxury?

Mr. COX. If it is a question of administration, how are the parties who administer this law to determine the amount of the preceding year, the tax being 10 per cent on the amount of the preceding year? Is there any indication that these concerns keep books?

Mr. KITCHIN. The sight-seeing cars are, as I understand, owned not by individuals as a rule, but owned by corporations, and in many cases by a syndicate. They make a return of their gross receipts every year for the purpose of income tax.

Mr. COX. Then there is a record of it?

Mr. KITCHIN. Yes. And then the department could compel them to keep a record if they do not now, and make the proper return.

We have levied a tax of 5 per cent upon the receipts of all taxicabs if the proprietor of the taxicabs owns three or more. We have taxed them at only 5 per cent, because taxicab expenditures can not be classed as luxuries in the entirety, such as the sight-seeing cars.

One very important tax is the tax on business—a general license tax of \$10 on each trade, profession, or business where the gross receipts are in excess of \$2,000. The Civil War tax act had substantially a similar provision. That will bring in something like \$10,000,000. We provide a license tax of \$25 upon the wholesale business if the gross receipts from such business exceed \$100,000 annually. We except, of course, the laboring man and agriculture.

Mr. BLANTON. Has there been any distinction made between a legitimate land agent and what we commonly call a "curbstone manipulator"?

Mr. KITCHIN. You mean in stocks?

Mr. BLANTON. I mean in land-agency business.

Mr. KITCHIN. No; not that.

Mr. BLANTON. A great many complaints have come in regarding that.

Mr. KITCHIN. We did not have the complaints before us, but we simply recommend a flat tax of \$10.

We also have provided a right interesting tax. Whatever objection the gentleman from Texas may have against other taxes, here is one that will please him: We have imposed a license tax of \$1,000 upon anyone to sell liquors in a dry territory. The committee thought that was right, regardless of the view men might have about prohibition or antiprobhibition.

Mr. CANNON. Does that apply to druggists?

Mr. KITCHIN. It applies in the same way and to the same persons that the \$25 license tax in existing law now applies. Wherever a man is now paying \$25 for a retail license, he will have to pay a thousand dollars if he proposes to sell in dry territory.

Mr. HASTINGS. I was going to ask the gentleman how he could justify a license in dry territory granted by the authority of the United States and fixed at any price?

Mr. KITCHIN. As a prohibitionist, that question used to worry me, but I found out that that is the only way the Government can assist in enforcing the law. The Government can not say, "You shall not sell whisky in North Carolina." North Carolina must control that herself. The only way the Government can assist in this matter is to impose a license tax.

Mr. HASTINGS. Then I would be in favor of a license tax.

Mr. KITCHIN. If we had no license tax at all, what interest would the Federal Government have in it? Congress can say that you can not ship liquor from a wet State into a dry State under the commerce clause of the Constitution. That question of the license tax in dry territory was up when Mr. UNDERWOOD was chairman of the Committee on Ways and Means. I was then a member of the committee. I asked that question, and I found out the reason, which I have given, why they had to have a license tax.

Mr. SIMS. Does the gentleman mean a license in the sense of a permit?

Mr. KITCHIN. No. If you sell without paying this tax, you become guilty. It is not a license in the technical legal sense.

Mr. CANNON. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CANNON. There are a great many druggists in this country. Most of them are honest. Most of them sell liquor, some of them perhaps by devious means. But in the main the druggists are honest. They can sell under prescription. Now, if they sell in dry territory, as in West Virginia, which is bone dry, is there a tax of \$1,000?

Mr. KITCHIN. I imagine if the State permits a druggist to sell under certain conditions, and he meets those conditions, he would not pay the \$1,000.

Mr. CANNON. He would pay the \$10?

Mr. KITCHIN. He would pay whatever the tax is now. It is \$25.

Mr. CANNON. Well, there is time in which to look it up, because \$1,000 is a serious proposition to a druggist, acting in good faith, who keeps his assortment of liquors for prescriptions.

Mr. KITCHIN. It ought to be just as it is now, where the State permits druggists to sell under certain conditions. We do not intend to make the druggist pay \$1,000, if the State allows him to use alcohol in filling prescriptions, unless he sells liquor in violation of the State law.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BORLAND. The wording of subsection 13 of Title X is—

Every person carrying on the business of a brewer, distiller, wholesale liquor dealer, retail liquor dealer, wholesale dealer in malt liquor, retail dealer in malt liquor, or manufacturer of stills, as defined in section 3244 as amended and section 3247 of the Revised Statutes, in any State, Territory, or District of the United States contrary to the laws of such State, Territory, or District, or in any place therein in which carrying on such business is prohibited by local or municipal law, shall pay, in addition to all other taxes, special or otherwise, imposed by existing law or by this act, \$1,000.

Would it not make it stronger if the committee had provided, "without the permission or authority of said State"?

Mr. KITCHIN. I suggest that the gentleman withhold that. It may be a valuable suggestion, and it may be that we can take it up under the five-minute rule, though I think it is all right as it is in the bill.

Mr. BORLAND. He may not be violating any authority of the State, but he may not have the permission of the State.

Mr. KITCHIN. The language is, "carrying on the business of a brewer, distiller, wholesale liquor dealer, retail liquor dealer * * * in any State, Territory, or District of the United States contrary to the laws of such State, Territory, or District, or in any place therein in which carrying on of such business is prohibited by local or municipal law, shall pay, in addition to all other taxes imposed by existing law or by this act, \$1,000." I think that is fully sufficient.

I will say to the gentleman from Illinois [Mr. CANNON] that Mr. Walker, the chief clerk of our committee, who has looked up the existing law on the subject since this question arose a few moments ago, informs me that my answer was correct, that a druggist, in the case the gentleman gave, would not be subject to the payment of \$1,000 if the State permits him to use alcohol in filling prescriptions, unless he was selling liquor in violation of the State law.

Mr. WALDOW. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. WALDOW. With reference to the corporation-stock tax, I understood the gentleman to say a few minutes ago that they exempt a corporation of \$5,000?

Mr. KITCHIN. Yes.

Mr. WALDOW. The bill does not read that way. It says "on the value of capital stock exceeding \$99,000."

Mr. KITCHIN. If I did not, I meant to say that we had in this bill an exemption of \$5,000, while in the present law the exemption was \$99,000; that is, the tax applied on the stock in excess of \$99,000 in existing law and in excess of \$5,000 in the bill.

Mr. WALDOW. I understand.

Mr. KITCHIN. If it were a corporation, for instance, the value of whose stock did not exceed \$5,000, it would pay nothing, but if its value was \$10,000 it would have an exemption of \$5,000, and pay on \$5,000, the excess.

Mr. WALDOW. In the present law we provide that the corporation may use part of its surplus, or all of it, if it desires, to purchase Government bonds. Has that law been changed?

Mr. KITCHIN. There is no limit to the amount of bonds a corporation can buy.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. TREADWAY. With the chairman's permission, may I make one further inquiry in respect to the special taxes?

Mr. KITCHIN. Certainly.

Mr. TREADWAY. Would the gentleman be kind enough to state what the attitude was in respect to a possible tax on billboards? That tax is omitted, but if the gentleman will remember it was brought up in committee.

Mr. KITCHIN. The committee, as the gentleman remembers, considered it two or three times, but the committee felt that it was unnecessary to put a tax upon billboards. We have not put a tax upon the competitors of billboards, the press. That matter was up at the last session, and I think at that time the estimate was made at between \$850,000,000 and \$900,000,000 that are annually expended in advertising through the magazines, newspapers, and press, generally, and on the highways, billboards, street cars, and the like. A very small proportion—my recollection is less than 10 per cent—was by billboard advertisement.

There was considerable sentiment in the committee for a tax on billboard advertising and possibly it is a fair subject of taxation.

It is estimated that we will collect for a 12-month period under this title about \$165,000,000.

TITLE XI. STAMP TAXES.

The next is Title XI. That is the stamp tax. It is exactly as it is in the present law. We did not increase these taxes except in one case, and that is in the case of playing cards. We have made that tax four times what the tax was before 1917. It was 2 cents, then it was increased to 7 cents, and we now increase it to 8 cents.

Mr. WALSH. I want to ask the gentleman if the committee had considered putting a stamp tax on bank checks?

Mr. KITCHIN. Yes.

Mr. WALSH. But there is nothing in the bill.

Mr. KITCHIN. No. The committee decided almost unanimously that it would be a very unwise and probably an unjust tax, certainly an unnecessary tax, especially at this time. You would get several millions of dollars from it. When you think about the stamp on a check, you think that is very easy to collect. It is. You think it is very easy to pay. It sounds like it, but that is not the case.

When you analyze it you will find that it is a tax on deposits, because you are bound to put your money into the bank before you can draw a check on it to get it out; and at this time, of all times in the history of the country, we ought to encourage all the people to put their money into the banks instead of doing anything by law to discourage or handicap the banks in getting deposits or the people in putting money into the banks of the country. The banks must almost entirely finance the billions and billions of dollars each year of certificates of indebtedness that the Government must issue to carry on the war. They must also to a large extent finance and sell bonds, and when they do that they must loan money. Whether they sell them directly or not, the banks must loan money to the people who are going to buy them, and every encouragement should be given to the people to keep their money in the banks, so that the banks can perform this useful service to the Government as well as to the people at this time.

Mr. WALSH. The gentleman, of course, would not take issue with those who are urging the people, instead of putting their money into the banks, to put it into war-savings stamps and liberty bonds?

Mr. KITCHIN. No. I would discourage neither the depositing of money in the banks nor putting it in war-savings stamps and liberty bonds.

Mr. WALSH. But does the committee think that a small tax upon bank checks, such as was utilized during the Spanish War period, with the enormous amount of business that is being done to-day, with the money that is in circulation, with the large increase in the number of depositors, would seriously cripple or interfere with the banking business?

Mr. KITCHIN. I think it would take hundreds of millions of dollars out of the banks. In 1898 when the stamp tax was put on checks in the war-revenue act many, I might say most, of the people were not accustomed to putting their money into banks and paying out everything by check. There were few banks then scattered throughout the country. Now there are banks all over the country; there is a bank in every little town and village throughout the whole country.

These banks have educated everybody who had \$100 or \$10 or \$5 to put his money into the bank, and they have educated people to pay out everything by check, even 50 cents or a dollar, or any little amount, because the bank keeps his books for him and his checks are receipts. I know that throughout my section of the country, in the little towns in my State, every fellow pays every little bill in checks. He pays his washerwoman, his cook, his servant. Anything that he buys, even in the smallest amount, he pays by check.

Mr. TILMAN. The check is a permanent receipt.

Mr. KITCHIN. The gentleman is correct. The check is a permanent receipt. The people have been educated up to that since 1898. Now, if you charge them a cent or 2 cents for every check they draw, if a fellow has \$100 a month that he would now deposit and against which he would draw 50 or 60 checks, rather than pay a dollar or two for a stamped check book, or lick a stamp every time he drew a check, he would keep his money in his pocket and pay it out in cash. The bank could not afford to pay \$2 a month for check books for a man who kept \$100 or \$200 on deposit; and the man who had \$400 or \$500 in the bank would rather draw out half of it at a time if he had to pay a stamp tax on each check, whereas if there was no stamp on checks he would let the money stay in the bank and draw it out a little at a time, just as he does now. The gentleman from Massachusetts does not have in his part of the country what we have in the South, West, Middle West, and Southwest—the small banks in every little town or village, where the large majority of depositors keep less than \$300 on deposit. Many will not have to exceed \$50, \$25, and \$10, but they have been educated to put their money in banks, even to the smallest amount, and pay their little bills by checks. Such little deposits in different sections of the country will run up in the hundreds of millions of dollars. A tax on checks would cause the withdrawal from the banks of these hundreds of millions of dollars.

Mr. FOCHT. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. FOCHT. Has the gentleman made any estimate as to the amount of money such a stamp tax would produce in revenue?

Mr. KITCHIN. I think if we put a 2-cent stamp on each check that we would get thirty or forty million dollars.

Mr. GARNER. The last estimate in the last bill we had for a stamp tax was \$11,000,000. Of course, the deposits have increased very much since then.

Mr. KITCHIN. The gentleman means in 1898. Yes; that produced ten or eleven million dollars. I will say that in the emergency act of 1914 it was estimated that such a tax would produce \$18,000,000 with a 1-cent stamp. Two cents, I should say, would produce between thirty and forty million dollars.

Mr. FOCHT. I understood it would produce an enormous sum and would cost nothing to collect it.

Mr. KITCHIN. I have no doubt that it would produce somewhere around that sum if you could get the people to keep their money in the bank.

Mr. FOCHT. I want to call attention to the fact that when you speak of drawing the money from the bank you must remember that these banks are everywhere throughout the North as well as other parts of the country, and I am sure they would not withdraw the money, because they are paid 2 to 4 per cent interest on balances.

Mr. KITCHIN. All right; but suppose a man has \$50 in the bank and he wants to draw 50 checks of \$1 each. Before he would pay that stamp tax he would draw it out. The bank might pay him 3 or 4 per cent interest, but when it cost him 12 per cent to draw it out I think he would take it out quickly in one sum.

Mr. FOCHT. I have no doubt it would be distasteful and perhaps poor politics, but if it is necessary to raise the money I think it would be a good way to do it.

Mr. KITCHIN. I think the country as a whole is against such a suggestion and that the Government would lose more than it would gain from the revenue received from a 2-cent stamp tax on checks, as I explained in reply to the question of the gentleman from Massachusetts [Mr. WALSH].

Mr. WALSH. In other words, when they came to pay this sort of a tax they would forget their patriotism.

Mr. KITCHIN. No; not at all.

Mr. WALSH. Will the gentleman concede that there have been fewer letters written since the increase of letter postage?

Mr. KITCHIN. No; I think the fact is that the number is substantially the same. I think possibly more postal cards may be used now.

Mr. WALSH. If they use postal cards more, they pay less revenue.

Mr. LONDON. In the large cities, do not the people use the telephone more than they did because the messages only cost 3 or 4 cents?

Mr. KITCHIN. I imagine so. I understand from the Post Office Department that the estimates we made as to the increase in revenue on the receipts caused by the increase in letter postage and postal cards have been verified by experience. It has been the experience in Canada, where they increased their postage at the same rate we did, and before we did, and the report of the postmaster general in Canada is that there has been no material decrease on account of the increase of the rate of postage. You must understand that letters and cards must be written. One does not have to deposit his little cash in the bank and pay his bills by checks. He can keep his cash in his pocket and pay it out as necessity requires.

TITLE XII. ADVISORY TAX BOARD.

Title XII is known as the advisory tax board provision. We create by this title a board known as the advisory tax board. The members are to be appointed by the President, by and with the advice and consent of the Senate, and to be five in number. Their salaries are to be \$3,000 each. The President, of course, names the chairman, as on other commissions, and he can remove them any time he sees fit. Their function and duties are to help the commissioner, and to advise with him in the interpretation and administration of the internal-revenue laws. The commissioner can refer a question arising between the taxpayer and the Government to the board. The taxpayer can demand that the question be referred to the board, and the commissioner must so refer it. The board, after investigation, makes its findings and recommendation to the Commissioner of Internal Revenue. He can approve it or not, and then from the Commissioner of Internal Revenue an appeal lies from his decision. The recommendation of the board will, in practically all cases, be approved, as the commissioner could not possibly personally hear and investigate a fractional part of the cases.

I do not think there was a suggestion against the creation of this board. The commissioner must have it. He now has a board so far as the excess-profits tax is concerned, a voluntary advisory board; and with \$8,000,000,000 to collect as against two or three hundred million dollars before the war, we must furnish to the commissioner some aid in the form of an advisory board, and we must get the best talent we can for its membership.

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CAMPBELL of Kansas. Will they have any function outside of merely interpreting the law? Will they have any discretion?

Mr. KITCHIN. In the administration, yes. For instance, take the depletion and amortization features of the bill. Cases arising under them will be referred to the board by the commissioner—and the taxpayer can demand it—to see how much allowance one should have for amortization, depreciation, depletion, and so forth.

Mr. CAMPBELL of Kansas. I recall that a number of experts were called in to aid in the administration of the excess-profits provision of the present law. The functions of the new board will be similar to those of the present board, except that they will extend throughout the provisions of the bill?

Mr. KITCHIN. Yes. I want to say that in my judgment the Secretary of the Treasury, in selecting the gentlemen to be members of the present excess-profits tax board, made as wise a selection of men as has been made for the performance of any duty under this administration. I would hesitate to lodge such powers and discretions in the department as this bill does, if I did not feel sure that practically the same board, or a majority of the members of the same board, would be appointed to the board provided for in the bill. I think every man on the committee who knows of or who has examined the work of the present advisory board, and their manner of doing it, and the excellent judgment which they have displayed in the performance of the duties, feels confident that such men ought to be on the new board, and he is willing to trust such power and discretion to them and to the commissioner.

Mr. CHANDLER of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. CHANDLER of Oklahoma. Under section 1201 of the bill it seems that this board has power only to report its findings and recommendations to the commissioner. Does the gentleman not think that they should have more authority than that?

Mr. KITCHIN. No; I do not think so. The commissioner is responsible for the collection of this tax and for the proper administration of the law, and, of course, for everything in connection with it, and before any matter goes to the court he should pass upon it, but he should have the benefit of the findings and the recommendation of the board. I think it is the better way. I think in more than 19 cases out of 20 any Commissioner of Internal Revenue would adopt the board's recommendation.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. WALSH. I notice in section 1200 that the bill creates an advisory board, and it limits the existence of the board to 12 months after the termination of the war, but it does not limit or fix the terms of the members of the board.

Mr. KITCHIN. We intended the term of each member of the board to be as long as the term of the board, for a year after the war.

Mr. WALSH. In that connection, does not the gentleman think that this board might well be made practically permanent in the Treasury Department, at least as long as we are compelled to resort to this sort of taxation?

Mr. KITCHIN. I think the gentleman is correct. I think it will have to be made permanent, whether now or before the expiration of its life. As I said yesterday, we will never again in this country collect less than \$4,000,000,000 or \$5,000,000,000 taxes. Collections from taxes before the outbreak of the war never exceeded \$675,000,000, and the average for five years was about \$625,000,000 a year.

TITLE XIII. GENERAL ADMINISTRATIVE PROVISIONS.

The next title is title 13, general administrative provisions. These provisions we brought forward from the different acts and in some places amended here and there, in order to aid the department in more effectively administering the law, but the following are the main changes. For instance, we increased the salary of the commissioner to \$10,000. We have given him the power to appoint five deputies at a salary of \$5,000 each in lieu of three deputy commissioners now. I think their salaries are \$3,600 and \$4,000 now. The committee was unanimous in the belief that the commissioner had to have more deputies for the administration of such a law as this to help in the collection of such an immense amount of taxes. We also gave the commissioner the power to readjust the salaries of collectors, none, however, to receive more than \$6,000. Some of them now receive, perhaps, as low as \$3,000 and some as high as \$4,500, and at some places where the salary is \$4,000, I understand, it ought to be reduced, and at some places where it is \$3,000 or \$4,000 it ought to be increased. We leave the adjustment of the salaries to the discretion of the Treasury Department, the Commissioner of Internal Revenue, and the Secretary of the Treasury. We also appropriate \$7,500,000 additional for the collection of these taxes. Mr. Roper, the commissioner, came before us. He and his assistants were of the opinion that with this extra appropriation they could collect much more of the taxes levied under existing law as well as under the bill. One went pretty high and said we could get \$500,000,000 to \$1,000,000,000 more—certainly \$250,000,000 more—taxes with this appropriation, by getting more agent accountants, field accountants to make investigations and, if necessary, to examine the books of taxpayers. The committee considered that even if we could get \$100,000,000 more by giving seven and a half million dollars it was a good business proposition and investment. I think the committee was unanimously in favor of the appropriation.

Now, there is a new proposition—entirely new—to which I desire to call the attention of the House. Perhaps not 5 per cent of the Members have ever thought or heard of the suggestion contained in this bill; but it is certainly very important, and if adopted it will be of great service to the House and Senate. It is what is known as the drafting-service provision. We provide that the Speaker shall appoint one member and the President of the Senate shall appoint one. They shall have control of what is known as the drafting service; that is, they will help committees to draft bills properly, put them in simple, plain, everyday language, and get out of a bill the many little, inconsistent expressions or inconsistent provisions which you will find in most bills. They would be under the jurisdiction of the Committee on the Library. I think that committee has had some hearings heretofore on the question. The appointments of assistants or employees would be subject to the approval of the Speaker and the President of the Senate. Our committee has had a considerable experience with these gentlemen, who are known as expert draftsmen. Mr. Beaman has helped us in the preparation of two or three revenue bills. He has also helped other committees of the House in drafting bills.

Then, there is also Mr. Peacock, Mr. Parkinson, and Mr. Hubbard. I understand that some years ago some gentleman left an endowment to Columbia University with the idea of sending especially fitted men to assist in the drafting of bills by Congress and by the legislatures of the States. On account of their special equipment and fitness, these four gentlemen were appointed by Columbia University and paid out of this endowment with the hope that through their services the State legislatures and the Federal Congress would regard with favor the idea of having expert draftsmen to assist in putting bills in plain, simple, understandable language. These gentlemen have been helping the departments for a year or two and helping some of the committees of the Senate and of the House. Our committee has extensively used their valuable services for two years.

Mr. GARNER. Eleven States of the Union have by law recognized the advantage of a drafting service.

Mr. KITCHIN. I thank the gentleman for calling attention to that. I did not know it.

Mr. GARNER. That is my understanding.

Mr. KITCHIN. Any gentleman of any committee who uses the services of these gentlemen will know how valuable they are.

Mr. SIMS. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. SIMS. I can see how very serviceable such an arrangement would be, and I would like very much that these gentlemen should have the right themselves to point out what so often have been called "jokers" so that we can keep them out of legislation, especially right at the end of a session when legislation is being rushed through pell mell, regardless of whether anybody knows what he is voting for or not. And I would like to see them so interested in the business of legislation as to protect the House against "jokers" that have so often played an important part in legislation.

Mr. KITCHIN. I think they could detect the "jokers" all right.

Mr. SIMS. And I would want them to expose them and give them to the press.

Mr. CANNON. Would not the gentleman like to elect these clerks to Congress?

Mr. HASTINGS. I would not wish to vote for any proposition that would allow them to criticize Congress by putting statements out in the press, and so forth. We want them as servants in the House instead of as our masters.

Mr. KITCHIN. Nothing of the kind is contemplated or would be allowed. Our committee has used the services of Mr. Beaman constantly for months and months at a time in the preparation of the revenue bill of last session and the preparation of this bill, and in the preparation of the bill of March 3, 1917. The other gentleman also at times rendered us very valuable assistance in the preparation of these bills. The conference committees on these revenue bills have had the services of Mr. Beaman. He sat with us in the conference committee. In all the time he has been associated with us I have never heard him intimate directly or indirectly the least opinion about a policy, whether this or that policy should become part of the bill, whether it was right or wrong, wise or unwise policy or proposition. He and these other gentlemen have been absolutely neutral on questions of the right or wrong, wisdom or unwisdom of any affirmative legislation. Their work or duty is to put the legislative intention or object of the committee or Congress into clear, concise, unambiguous terms in the bill or act. For instance, suppose we want to arrange the jewelry and the cosmetic tax schedules. They could fix it in the form in which it could be administered, and in language that would catch exactly what we wanted to catch, and would not exclude what we did not want to exclude. Take the excess and war profits tax title. No tax feature of the bill was at first more complicated and so hard to arrange and simplify. I ask the careful reading and examination of the form and arrangement of this title. I venture the assertion that not in the knowledge or observation of any gentleman here was a complicated proposition put into a clearer or more understandable form and terms than are the provisions in the bill relating to this tax. They are a tribute to the study, labor, and expert knowledge of Mr. Beaman. I venture the further assertion that no bill was ever presented to Congress whose form, terms, and language were more simplified and clarified than this bill. To Mr. Beaman and these other expert gentlemen we are indebted.

Mr. COLLIER. Will the gentleman yield right there?

Mr. KITCHIN. I will.

Mr. COLLIER. Our excess-profits provision and the war-tax provision comprise, in explanation and definition of the tax itself, a little over three pages. Does the gentleman recall how

many pages the English Government excess-profits and war-profits taxes occupy?

Mr. KITCHIN. Dozens of pages of type like this.

Mr. COLLIER. Nearer a hundred.

Mr. KITCHIN. I wanted to call to your attention that Mr. Beaman put into about five lines in this bill what it took a page in the existing excess-profits tax law, and what it took two or three pages of the English law to state and provide. Our committee thought that their services were essential to us. The Merchant Marine and Fisheries Committee of the House, the Finance Committee of the Senate, the conference committee on the revenue bills have used the services of these experts, and I know they were highly pleased.

Mr. CLARK of Pennsylvania. I was going to remark that we have such a bureau in the State of Pennsylvania, and it has been working for some years and to great advantage.

Mr. KITCHIN. I did not know that. I thank the gentleman for giving the House the information. I know they have had such a bureau, or drafting board, in the New York Legislature for two or three years.

Mr. WALSH. Why should this valuable service be confined to committees of the House? Now, I am acquainted with the work done by Mr. Beaman, because he assisted the committee of which I have the honor to be a member in drafting some of the important war measures, and I can say that he never intimated in any way what the policy of the committee ought to be, but simply has put the matter in language to carry out the intention of the committee. But, if we are going to have a drafting service here, should not these men, with this force they are to have, for which we expect to appropriate \$25,000 for the balance of the fiscal year, not be at the service of all Members? If a Member wants to draft a bill, why can not he go and ask the members of this service to draw up the bill?

Mr. KITCHIN. I will say to the gentleman this—

Mr. WALSH. I do not think the Committee on the Library ought to have—

Mr. KITCHIN. This service should be primarily for the assistance of the committees. I think that the chairmen of the committees should make the request instead of each one of the 435 Members of the House. We know how many thousands of bills are introduced at each session.

Mr. GARNER. Over 40,000.

Mr. KITCHIN. Over 40,000, and if we made it so that each individual Member could go to the drafting service and ask it to write a bill to be introduced, they would have no time to help a committee when it was drafting a bill under consideration.

Mr. WALSH. I would just like to ask the gentleman under what provision of the rules the Committee on Ways and Means reports out a provision like this on a revenue bill?

Mr. KITCHIN. Under no particular rule. There is nothing against it, however.

Mr. JAMES. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. I will.

Mr. JAMES. Does the gentleman believe that if each Member could use this service there would be more bills? In Michigan we found it the exact opposite. A good many times a member of the legislature or the senate would go to the legislative clerk to introduce a bill and he would call attention to the fact that there was already a bill of that kind on the statute books, and the result was that we had fewer bills.

Mr. STEVENSON. In South Carolina we have solicitors, 14 of them, and they are required to do their duty and are paid by the legislature, and it is provided that no bill can be introduced until it has been prepared by them. We find it is a very great safeguard against injudicious legislation.

Mr. KITCHIN. Gentlemen, another day is about to close and I think I ought to close. I have been speaking to-day from half past 12 to a little after 5. I want to state to my friend from Illinois [Mr. CANNON] that I broke one promise that I made to him yesterday, that I would show, when I came to the excess and war profits tax provisions of the bill, how we would catch the excessive profits of contractors with the Government. I was switched off to so many phases of the excess and war profits tax that I was unable for lack of time to discuss it, but under the five-minute debate I will show the House how we propose under this bill to catch the profiteers of the Government, the contractors and subcontractors with the Government.

Before concluding, however, I will recapitulate the amount of taxes the bill will yield for a 12-months' period under the several taxing provisions by giving a table of estimates prepared by the Treasury expert, at our request, which also includes an estimate for a like period under existing laws and the receipts for the fiscal year 1918:

	Estimated revenue receipts.		
	Fiscal year 1918.	Fiscal year 1919 under existing law.	For 12-month period under proposed bill.
Income tax:			
Individual.....	\$630,000,000	\$630,000,000	\$1,482,186,000
Corporation.....	528,500,000	528,500,000	894,000,000
Excess-profits tax.....	1,791,000,000	1,791,000,000	3,200,000,000
Estate tax.....	47,453,000	75,000,000	110,000,000
Transportation:			
Freight.....	30,000,000	75,000,000	75,000,000
Express.....	6,450,000	20,000,000	20,000,000
Persons.....	24,306,000	60,000,000	60,000,000
Oil by pipe lines.....	1,453,000	3,600,000	4,550,000
Seats and berths.....	2,237,000	5,000,000	5,000,000
Telegraph and telephone.....	6,492,000	14,000,000	16,000,000
Insurance.....	4,492,000	12,000,000	12,000,000
Admissions.....	26,357,000	50,000,000	100,000,000
Club dues.....	2,250,000	4,500,000	9,000,000
Excise taxes:			
Automobiles, etc.....	23,981,000	41,000,000	123,750,000
Jewelry, sporting goods, etc.....	13,000,000	35,000,000	80,000,000
Other taxes on luxuries, at 10 per cent.....			88,700,000
Other taxes on luxuries, at 20 per cent.....			184,795,000
Gasoline.....			40,000,000
Yachts and pleasure boats.....			1,000,000
Beverages.....	300,000,000	500,000,000	1,137,600,000
Stamp taxes.....	18,815,000	32,000,000	32,000,000
Tobacco:			
Cigars.....	30,900,000	41,700,000	61,364,000
Cigarettes.....	66,050,000	100,000,000	165,240,000
Tobacco.....	48,000,000	63,700,000	104,000,000
Snuff, etc.....	10,000,000	6,000,000	9,100,000
Papers and tubes.....	325,000	750,000	1,500,000
Special taxes:			
Capital stock.....	24,936,000	25,000,000	70,000,000
Brokers.....	133,000	850,000	1,765,000
Theaters, etc.....	865,000	1,070,000	2,143,000
Mail-order sales.....			5,000,000
Bowling alleys, billiard and pool tables.....	1,086,000	1,100,000	2,200,000
Shooting galleries.....			400,000
Riding academies.....			50,000
Business license tax.....			10,000,000
Manufacturers of tobacco.....		37,000	60,000
Manufacturers of cigars.....	538,000	440,000	850,000
Manufacturers of cigarettes.....		120,000	240,000
Use of automobiles and motorcycles.....			72,930,000
Total.....	3,941,663,000	4,417,267,000	8,182,492,000

¹ Assessed but not all collected in 1918.

Income tax based on total individual income of (taxable)..... \$7,400,000,000
Corporation excess profits and income tax on net income of..... 10,000,000,000

Gentlemen, I want to thank the Members, so many of whom have been patient enough to hear me for two days. I shall always remember your patience and kindness with gratitude. I thank you again. [Applause.]

EXTENSION OF REMARKS OF HON. WILLIAM GORDON, OF OHIO, IN THE HOUSE OF REPRESENTATIVES, Tuesday, October 15, 1918.

Mr. GORDON. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include the following argument of James A. Garfield, late President of the United States, before the Supreme Court of the United States in the case of *ex parte Milligan*, 71 U. S. 2, 4 Wallace:

AN ADDRESS OF THE LATE PRESIDENT GARFIELD.

Nullus liber homo capietur, vel imprisonetur, aut dissaisiatur, aut utlagetur, aut exuletur, aut aliquo modo destruat, nec super eum libnus, nec super eum mittetur, nisi per legale iudicium parium suorum, vel per legem terre.—Magna Carta, Cap. XXXIX.

May it please the court: In the months of September and October, 1864, Lambdin P. Milligan, William A. Bowles, and Stephen Horsey, natives of the United States and citizens of the State of Indiana, were arrested by order of Alvin P. Hovey, major general commanding the military district of Indiana, and on the 21st of the latter month were placed on trial before a military commission convened at Indianapolis, by order of Gen. Hovey, on the following charges, preferred by Maj. Henry L. Burnett, judge advocate of the Northwestern Military Department, viz:

1. Conspiracy against the Government of the United States.
2. Affording aid and comfort to rebels against the Government of the United States.
3. Inciting insurrection.
4. Disloyal practices.
5. Violations of the laws of war.

The commission, overruling the objection of the accused against its authority to try them, proceeded with the trial, pronounced them guilty, and sentenced them to death by hanging. The sentence was approved on the 2d of May, 1865; but before the day fixed for its execution, the President of the United States commuted it to imprisonment for life, and the prisoners are now confined in the penitentiary of Ohio.

On the 10th of the same month, they filed their petition in the Circuit Court of the United States for the District of Indiana, setting forth the above facts, and also declaring that, while the petitioners were held in military custody, and more than 20 days after their arrest, a grand jury of the Circuit Court of the United States for the District of Indiana was convened at Indianapolis, the petitioners' place of confinement, and, being duly impaneled, charged, and sworn for said district, held its sittings, and finally adjourned, without having found any bill of indictment, or made any presentment whatever against them; that at no time had they been in the military service of the United States, or in any way connected with the land or naval force, or the militia in actual service; that they had not been within the limits of any State whose citizens were engaged in rebellion against the United States at any time during the war, but during all the time aforesaid, and for 20 years last past, had been inhabitants, residents, and citizens of Indiana. The petitioners' claim to be discharged from military custody was founded upon the provisions of an act of Congress of March 3, 1863, entitled "An act relative to habeas corpus, and regulating judicial proceedings in certain cases." On hearing the petition, the opinions of the judges of the circuit court were opposed, and they have certified to this court for its decision the following questions, viz:

1. On the facts stated in the petition and exhibits, ought a writ of habeas corpus to be issued, according to the prayer of said petitioners?

2. On the facts stated in the petition and exhibits, ought the petitioners to be discharged from custody, as in said petition prayed?

3. Whether, upon the facts stated in said petition and exhibits, the military commission mentioned therein had jurisdiction legally to try and sentence said petitioners in manner and form as in said petition and exhibits is stated.

These preliminary proceedings have been so fully stated and examined by the gentleman who opened the cause (Hon. J. E. MacDonald), that I need not dwell upon them further.

I desire to say, in the outset, that the questions now before this court have relation only to constitutional law, and involve neither the guilt or the innocence of the relators, nor the motives and patriotism of the officers who tried and sentenced them. I trust I need not say in this presence that in my estimation nothing in the calendar of infamy can be more abhorrent than the crimes with which the relators were charged; nothing that more fully deserves the swift vengeance of the law, and the execration of mankind. But the questions before your honors are not personal. They reach those deep foundations of law on which the Republic is built; and in their proper settlement are involved the highest interests of every citizen.

Had the military commission jurisdiction legally to try and sentence the petitioners? Upon the determination of this question the whole cause rests. If the commission had such jurisdiction, the petitioners are legally imprisoned, and should not be discharged from custody; nor should a writ of habeas corpus be issued in answer to their prayer. If the military commission had not jurisdiction, the trial was void, the sentence illegal, and should not be further executed.

As a first step toward reaching an answer to this question, I affirm that every citizen of the United States is under the dominion of law; that, whether he be a civilian, a soldier, or a sailor, the Constitution provides for him a tribunal before which he may be protected if innocent, and punished if guilty of crime. In the fifth article of the amendments to the Constitution it is declared that—

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall he be compelled, in any criminal case, to be a witness against himself; nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

This sweeping provision covers every person under the jurisdiction of the Constitution. To the general rule of presentment or indictment of a grand jury, there are three exceptions: First, cases arising in the land forces; second, cases arising in the naval forces; third, cases arising in the militia when in actual service in time of war or public danger. All these classes are covered by express provisions of the Constitution. In whatever one of these situations an American citizen may be placed, his rights are clearly defined, and a remedy is provided against oppression and injustice. The Constitution establishes the Supreme Court, and empowers Congress to constitute tribunals inferior to that court; "to make rules for the government and regulation of the land and naval forces," and to provide for governing such part of the militia as may be employed in the service of the United States. No other tribunal is authorized or recognized by the Constitution. No other is established by the laws of Congress. For all cases not arising in the land or naval forces, Congress has amply provided in the judiciary act of September 24, 1789, and the acts amendatory thereof. For all cases arising in the naval forces, it has fully provided in the act of March 2, 1793, "for the government of the Navy of the United States," and in similar subsequent acts.

But since the opposing counsel do not claim to find authority for the tribunal before which the petitioners were tried in either of these categories, I shall proceed to examine, somewhat minutely, the limits and boundaries of the military department; the character of its tribunals; the classes of persons who come within its jurisdiction; and the defenses which the law has thrown around them.

We are apt to regard the military department of the Government as an organized despotism, in which all personal rights are merged in the will of the Commander in Chief. But that department has definitely marked boundaries, and all its members are not only controlled but also sacredly protected by definitely prescribed law. The first law of the Revolutionary Congress touching the organization of the Army, passed September 20, 1776, provided that no officer or soldier should be kept in arrest more than eight days without being furnished with the written charges and specifications against him; that he should be tried, at as early a day as possible, by a regular military court, whose proceedings were regulated by law, and that no sentence should be carried into execution until the full record of the trial had been submitted to Congress or to the Commander in Chief, and his or their direction be signified thereon. From year to year Congress has added new safeguards to protect the rights of our soldiers, and the Rules and Articles of War are as really a part of the laws of the land as the judiciary act or the act establishing the Treasury Department. If the humblest private soldier in the Army be wronged by his commanding officer, he may demand redress by sending the statement of his grievance step by step through the appointed channels, till it reaches the President or Congress, if justice be not done him sooner.

The main boundary line between the civil and military jurisdictions is the muster into service. Before that act the citizen is subject to the jurisdiction of the civil courts; after it, until his muster out, he is subject to the military jurisdiction in all matters of military duty. This line has been carefully surveyed by the courts, and fixed as the lawful boundary. They do not regard a citizen as coming under the jurisdiction of a Federal court-martial, even when he has been ordered into the military service by the governor of his State, on requisition of the President, until he reaches the place of general rendezvous, and has been actually mustered into the service of the United States. On this point I cite the case of *Mills v. Martin* (19 Johnson's N. Y. Repts., 6). In that case, a militiaman, called out by the governor of the State of New York, and ordered by him to enter the service of the United States, on a requisition of the President for troops, refused to obey the summons, and was tried by a Federal court-martial for disobedience of orders. The Supreme Court of the State of New York decided that, until he had gone to the place of general rendezvous, and had been regularly enrolled, and mustered into the national militia, he was not amenable to the action of a court-martial composed of officers of the United States. The judge, in giving his opinion, quoted the following language of Mr. Justice Washington, of the Supreme Court of the United States, in the case of *Houston against Moore*:

From this brief summary of the laws, it would seem that actual service was considered by Congress as the criterion of national militia; and that the service did not commence until the arrival of the militia at the place of rendezvous. That is the terminus a quo the service, the pay, and subjection to the Articles of War are to commence and continue. (5 Wheaton, 29.)

By the sixtieth article of war, the military jurisdiction is so extended as to cover those persons not mustered into the service, but necessarily connected with the Army. It provides that "all sutlers and retainers to the camp, and all persons whatsoever serving with the armies of the United States in the field, though not enlisted soldiers, are to be subject to orders, according to the Rules and Articles of War." (Army Regulations, 1861.)

That the question of jurisdiction might not be doubtful, it was thought necessary to provide by law of Congress that spies should be subject to trial by court-martial. As the law stood for 85 years, spies were described as "persons not citizens of, or owing allegiance to, the United States, who shall be found lurking," etc. Not until after the great Rebellion began was this law so amended as to allow the punishment by court-martial of citizens of the United States who should be found lurking about the lines of our Army to betray it to the enemy; for until then, be it said to the honor of our people, it had never been thought possible that any American citizen would become a spy, to aid the enemies of the Republic; but in 1862 the law was so amended that such a citizen, if found lurking about the lines of the Army as a spy, in time of war, should be tried by a court-martial as though he were a spy of a foreign nation.

It is evident, therefore, that by no loose and general construction of the law can citizens be held amenable to military tribunals, whose jurisdiction extends only to persons mustered into the military service, and such other classes of persons as are, by express provisions of law, made subject to the rules and articles of war.

But even within their proper jurisdiction military courts are, in many important particulars, subordinate to the civil courts. This is acknowledged by the leading authorities on this subject. I read from O'Brien's Military Law. After discussing the general relations between the civil and military departments of the Government, he says:

From this admitted principle, it would seem a necessary consequence that the Supreme Court of the United States has an inherent power over all military tribunals, of precisely the same nature as that which it asserts and exercises over inferior courts of civil judicature. Any mandatory or prohibitory writ, therefore, emanating from the Supreme Court of the United States, and addressed to a court-martial, would demand the most unhesitating obedience on the part of the latter. Whether, in the absence of a special law to that effect, the same obedience is due to a writ coming from a circuit or district court of the Union, and directed to a court-martial assembled in the district or circuit, does not appear to be so clear. A military tribunal would doubtless obey such a writ. As to State courts, the case is very different. Military courts are entirely independent of them. Their powers are derived from a distinct, separate, and independent source. In regard to the courts of the United States, there can be no question. Each individual member of a court-martial is also liable to the supreme courts of civil judicature, not only for any abuse of power but for any illegal proceedings of the court, if he has voted for or participated in the same.

The authority of courts-martial is sometimes extended by executive governments, subjecting, by proclamation, certain districts or countries to the jurisdiction of martial law during the existence of a rebellion. But in all such cases a court-martial ought to be fully assured that the warrant or order under which they are assembled is strictly legal; and that the prisoners brought before them were actually apprehended in the particular district or country which may have been subjected to martial law, and during the period that the proclamation was actually in force. Any error in these particulars would render their whole proceedings illegal. (Pages 222-226, Philadelphia, 1846.)

In further vindication of my last proposition, I shall cite a few precedents from English and American history.

1. A Lieut. Frye, serving in the West Indies in 1743 on board the *Oxford*, a British man-of-war, was ordered by his superior officer to assist in arresting another officer and bringing him on board the ship as a prisoner. The lieutenant, doubting the legality of the order, demanded—what he had, according to the customs of the naval service, a right to demand—a written order before he would obey the command. For this he was put under arrest, tried by a naval court-martial, sentenced to 15 years' imprisonment, and forever debarred from serving the King. He was sent to England to be imprisoned, but was released by order of the Privy Council. In 1746 he brought an action before a civil court against the president of the court-martial, Sir Chaloner Ogle, and damages of £1,000 were awarded him for his illegal detention and sentence; and the learned judge informed him that he might also bring his action against any member of the court-martial. Rear Admiral Mayne and Capt. Rentone, who were members of the court that tried him, were, at the time when damages were awarded to Lieut. Frye, sitting on a naval court-martial for the trial of Vice Admiral Lestock. The lieutenant proceeded against them, and they were arrested upon a writ from the court of common pleas. The order of arrest was served upon them just as the court-martial adjourned one afternoon. Its members, 15 in number, immediately reassembled and passed resolutions de-

claring it a great insult to the dignity of the naval service that any person, however high in civil authority, should order the arrest of a naval officer for any of his official acts. The Lord Chief Justice, Sir John Willes, immediately ordered the arrest of all the members of the court who signed the resolutions, and they were arrested. They appealed to the King, who was very indignant at the arrest. The judge, however, persevered in his determination to maintain the supremacy of the civil law, and after two months' examination and investigation of the cause all the members of the court-martial signed a humble and submissive letter of apology, begging leave to withdraw their resolutions, in order to put an end to further proceedings. When the Lord Chief Justice had heard the letter read in open court, he directed that it be recorded in the remembrance office, "as a memorial to the present and future ages, that whoever set themselves up in opposition to the laws, or think themselves above the law, will in the end find themselves mistaken." (See *McArthur on Courts-Martial* (London, 1806), vol. 1, pp. 229-232. See also *London Gazette* for 1745-46, Library of Congress.)

2. I beg leave to cite the case of *Wilson* against *MacKenzie*. This court will remember the remarkable mutiny, in 1842, on board the brig *Somers*, in which a son of the then Secretary of the Treasury of the United States was tried by court-martial for mutiny, and executed at the yardarm. It was proved that a mutiny of very threatening aspect had broken out, and that the lives of the captain and his officers were threatened by the mutineers. Among the persons arrested was the plaintiff, *Wilson*, an enlisted sailor, who, being supposed to be in the conspiracy, was knocked down by the captain, ironed, and held in confinement for a number of days. When the cruise was ended, *Wilson* brought suit against the captain for illegal arrest and imprisonment. The cause was tried before the Supreme Court of New York, and his honor, Chief Justice Nelson, delivered the opinion of the court. He says:

The material question presented in this case is whether the common-law courts have any jurisdiction of personal wrongs committed by a superior officer of the Navy upon a subordinate while at sea and engaged in the public service. * * * Actions of trespass for injuries to the person have been frequently brought and sustained in the common-law courts of England against naval as well as military commanders by their subordinates, for acts done both at home and abroad, under pretense and color of naval and military discipline. (See *Wall v. McNamara* and *Swinton v. Molloy*, stated in 1 T. R., 536, 537; also, *Moslyn v. Fabrigas*, Cowp., 161; *Warden v. Bailey*, 4 Taunt., 67; 4 Maule & Selw., 400, 8 C.) * * * There are also many cases in the books where actions have been sustained against members of courts-martial, naval and military, who have exceeded their authority in the infliction of punishment. (See 4 Taunt., 70-75, and the cases there cited.) * * * It was suggested on the argument, by the counsel for the defendant, that, inasmuch as he [*Wilson*] was in the service of the United States when the acts complained of were done, the courts of this State as matter of comity and policy, should decline to take jurisdiction. * * * I am of opinion that the demurrer [to the suggestion] is well taken, and that the plaintiff [*Wilson*] is entitled to judgment. Ordered accordingly. (7 Hill's N. Y. Supreme Court Reports, 97-100.)

3. As a clear and exhaustive statement of the relation between civil and military courts, I quote from an opinion of this court in the case of *Dynes v. Hoover* (20 Howard, 82, 83):

With the sentences of courts-martial which have been convened regularly, and have proceeded legally, and by which punishments are directed, not forbidden by law, or which are according to the laws and customs of the sea, civil courts have nothing to do, nor are they in any way alterable by them. If it were otherwise, the civil courts would virtually administer the Rules and Articles of War, irrespective of those to whom that duty and obligation has been confided by the laws of the United States, from whose decisions no appeal or jurisdiction of any kind has been given to the civil magistrate or civil courts. But we repeat, if a court-martial has no jurisdiction over the subject matter of the charge it has been convened to try, or shall inflict a punishment forbidden by the law, though its sentence shall be approved by the officers having a revisory power of it, civil courts may, on an action by a party aggrieved by it, inquire into the want of the court's jurisdiction, and give him redress. (*Harman v. Tappenden*, 1 East, 555; as to ministerial officers, *Marshall's Case*, 10 Cr., 76; *Moravia v. Sloper*, Willes, 30; *Parton v. Williams*, 3 B. & A., 330; and as to justices of the peace, by Lord Tenterden, in *Basten v. Carew*, 3 B. & C., 653; *Mills v. Collett*, 6 Bing., 85.)

Such is the law of England. By the mutiny acts, courts-martial have been created with authority to try those who are a part of the army or navy for breaches of military or naval duty. It has been repeatedly determined that the sentences of those courts are conclusive in any action brought in the courts of common law. But the courts of common law will examine whether courts-martial have exceeded the jurisdiction given them, though it is said, "not, however, after the sentence has been ratified and carried into execution." (*Grant v. Gould*, 2 H. Black., 69; *Ship Bounty*, 1 East, 313; *Shalford's Case*, 1 East, 313; *Mann v. Owen*, 9 B. & C., 595; In the Matter of *Poc*, 5 B. & A., 681, on a motion for a prohibition.)

I hold it therefore established, that the Supreme Court of the United States may inquire into the question of jurisdiction of a military court; may take cognizance of extraordinary punishment inflicted by such a court not warranted by law, and may issue writs of prohibition, or give such other redress as the case may require. It is also clear that the Constitution and

laws of the United States have carefully provided for the protection of individual liberty, and the right of accused persons to a speedy trial before a tribunal established and regulated by law.

The petitioners must, as I have already shown, be placed in one of four categories. First, they were either in the naval service; or, second, in the military service; or, third, belonged to the militia, and were called out to serve by order of the President in the national militia; or, fourth, if neither of these three, nor so connected with them as to be placed by law under the naval or military jurisdiction, then they were simply civilians, and subject exclusively to the jurisdiction of the civil courts. It is set forth in the petition, and not denied by the opposing counsel, that they were in neither of the first three classes, nor connected with them. They must, therefore, belong to the fourth class—unless a fifth should be added, as the learned counsel on the other side have suggested, and it be held that they were prisoners of war; but of that I shall speak hereafter. Under such circumstances, it is not surprising that the learned counsel should go beyond the Constitution, beyond the civil, the naval, and even the military law, to find a basis on which they may rest the jurisdiction of the tribunal before which the petitioners were tried. They tell us frankly that they do not find its justification either in the civil or military laws of the land.

The honorable Attorney General and his distinguished colleague (Hon. B. F. Butler) declare in their printed brief, that—

I. A military commission derives its powers and authority wholly from martial law; and by that law and by military authority only are its proceedings to be judged or reviewed.

II. Martial law is the will of the commanding officer of an armed force, or of a geographical military department, expressed in time of war within the limits of his military jurisdiction, as necessity demands and prudence dictates, restrained or enlarged by the orders of his military chief or supreme executive ruler, and the officer executing martial law is at the same time supreme legislator, supreme judge, and supreme executive.

To give any color of plausibility to these novel propositions, they were compelled not only to ignore the Constitution, but to declare it suspended, its voice drowned in the thunders of war. Accordingly, with consistent boldness, they declare that the third, fourth, and fifth articles of amendments "are all peace provisions of the Constitution, and, like all other conventional and legislative laws and enactments, are silent inter arma, when *salus populi suprema est lex*." Applying these doctrines to this cause, they hold that from the 5th of October, 1864, to the 9th of May, 1865, martial law alone existed in Indiana; that it silenced not only the civil courts, but all the laws of the land, and even the Constitution itself; and during that silence the executor of martial law could lay his hand upon every citizen, could not only suspend the writ of habeas corpus, but could create a court which should have the exclusive jurisdiction over the citizen to try him, sentence him, and put him to death.

We have already seen that the Congress of the United States raises and supports armies, provides and maintains navies, and makes the rules and regulations for the government of both, but it would appear from the teachings of the learned counsel on the other side, that when Congress has done all these things—when, in the name of the Republic, and in order to put down rebellion and restore the supremacy of law, it has created the grandest army that ever fought—the power thus created rises above its source and destroys both the law and its creator. They would have us believe that the Government of the United States has evoked a spirit which it can not lay—has called into being a power which at once destroyed and superseded its author, and rode, in uncontrolled triumph, over citizen and court, Congress and Constitution. All this mockery is uttered before this august court, whose every member is sworn to administer the law in accordance with the Constitution. This monstrous assumption I shall now proceed to examine.

And now what is martial law? It is a new term to American jurisprudence; and I congratulate this court that never before in the long history of this Republic has that word rung out its lawless echoes in this sacred chamber.

Mr. BUTLER. Did not the decision in the case of *Luther against Borden* have something to do with martial law?

It was not the subject decided by the court, and only remotely analogous to this case. The claim to exercise martial law in that case was under the old charter of Charles II in Rhode Island, and not under the Constitution.

1. Sir Matthew Hale, in his *History of the Common Law*, says:

Touching the business of martial law, these things are to be observed, viz:

First. That in truth and reality it is not a law, but something indulged rather than allowed as a law. The necessity of government,

order, and discipline in an army is that only which can give those laws a countenance—quod enim necessitas cogit defendi.

Secondly. This indulged law was only to extend to members of the army, or to those of the opposite army, and never was so much indulged as intended to be executed or exercised upon others. For others who were not listed under the army had no color or reason to be bound by military constitutions applicable only to the army, whereof they were not parts. But they were to be ordered and governed according to the laws to which they were subject, though it were a time of war.

Thirdly. That the exercise of martial law, whereby any person should lose his life, or member, or liberty, may not be permitted in time of peace, when the King's courts are open for all persons to receive justice according to the laws of the land. This is in substance declared in the *Petition of Right* (3 Car. 1) whereby such commissions and martial law were repealed and declared to be contrary to law. (London edition of 1794, vol. 1, pp. 54, 55.)

2. Blackstone quotes the above approvingly, and still further enforces the same doctrine. (Book I, pp. 413, 414.)

3. Wharton, in his *Law Lexicon*, says: "Martial law is that rule of action which is imposed by the military power. It has no place in the institutions of this country [Great Britain], unless the Articles of War established under the military acts be considered as of that character. The prerogative of proclaiming martial law within this Kingdom is destroyed, as it would appear, by the *Petition of Right*." (Third edition, p. 578.)

4. Lord Wellington defined martial law as "the will of the commanding general exercised over a conquered or occupied territory." This definition was given by him in his dispatches from the Peninsula, and was subsequently repeated in Parliament, in 1851. In the same debate Lords Cottenham and Campbell and the Attorney General, Sir J. Jervis, declared that "martial law was the setting aside of all law, and acting under military power, in circumstances of great emergency—a proceeding which requires to be followed up by an act of indemnity."

This is the kind of law to which the gentlemen appeal to establish the validity of the court that tried the petitioners.

In order to trace the history and exhibit the character of martial law, I shall refer to several leading precedents in English history.

1. The Earl of Lancaster. In the year 1322, the Earl of Lancaster and the Earl of Hereford rebelled against the authority of Edward II. They collected an army so large that Edward was compelled to raise 30,000 men to withstand them. The rebellious earls posted their forces on the Trent, and the armies of the King confronted them. They fought at Boroughbridge; the insurgent forces were overthrown; Hereford was slain, and Lancaster, taken in arms at the head of his army, was, amid the noise of battle, tried by a court-martial, sentenced to death, and executed. When Edward III came into power, five years later, on a formal petition presented to Parliament by Lancaster's son, setting forth the facts, the case was examined and a law was enacted reversing the attainder, and declaring: "1. That in time of peace no man ought to be adjudged to death for treason, or any other offense, without being arraigned and put to answer. 2. That regularly, when the King's courts are open, it is a time of peace in judgment of law. 3. That no man ought to be sentenced to death, by the record of the King, without his legal trial per pares." (The *History of the Pleas of the Crown*, by Sir Matthew Hale (Dublin, 1778), vol. 1, p. 347; Hume's *History of England* (Boston, 1854), vol. 2, p. 159.)

I call attention to this case as being similar in some of the points to the case before us. This man was taken in arms at the head of his army, and in battle. He was immediately tried by court-martial and executed; but it was declared, in the decree that reversed the attainder, that he might have been tried by the courts of the land, and therefore, for the purposes of his trial, it was a time of peace; that he might have been presented, indicted, and regularly tried before the civil tribunal, and therefore the whole proceeding was illegal. So carefully was the line drawn between civil and martial law 500 years ago.

2. Sir Thomas Darnell. He was arrested and imprisoned in 1625, by order of the King, for refusing to pay a tax which he regarded as illegal. A writ of habeas corpus was prayed for, but answer was returned by the court that he had been arrested by special order of the King, and that was held to be a sufficient answer to the petition. Then the great cause came up to be tried in Parliament, whether the order of the King was sufficient to override the writ of habeas corpus, and after a long and stormy debate, in which the ablest minds in England were engaged, the *Petition of Right*, of 1628, received the sanction of the King. In that statute it was decreed that the King should never again suspend the writ of habeas corpus; that he should never again try a subject by military commission; and since that day no King of England has presumed to usurp that high prerogative which belongs to Parliament alone.

3. For the purpose of citing a passage in the argument of Counselor Prynne, I call attention to the trial of Lord Macguire, before the court of king's bench, in 1645 (4 State Trials (London, 1809), pp. 653 et seq.). Lord Macguire was the leader of the great Irish rebellion of 1641, during the progress of which more than 100,000 men, women, and children were murdered, under circumstances of the greatest brutality. He was arrested and held until order had been restored; and in 1645 was brought before the king's bench for trial. Mr. Prynne, counsel for the Crown, published his argument in the case, in order, as he says, to vindicate the laws of England—

In trying this notorious offender, guilty of the horriddest, universal treason and rebellion that ever broke forth in Ireland; and that in a time of open war both in Ireland and England, only by a legal indictment, and indifferent sworn jury of honest and lawful freeholders, according to the known laws and statutes of the realm; not in a court-martial, or any other new-minted judicature, by an arbitrary, summary, illegal, or martial proceeding, without any lawful presentment, indictment, or trial by a sworn, impartial, able jury, resolved to be diametrically contrary to the fundamental laws, customs, great charters, statutes of the realm, and inherent liberty of the subject, especially in time of peace when all other courts of justice are open, and of very dangerous consequence, and thereupon especially prohibited, and enacted against.

After giving a long list of references to authorities, he goes on to say that the law is vindicated still more—

In allowing him a free, honorable trial upon an indictment first found upon oath by the grand jury, and then suffering him to take not only his particular challenges by the poll to every of the jurors returned, upon a *voire dire* (not formerly heard of, yet allowed him, as reasonable, to take away all color of partiality or nonindifference in the jurors), whereupon every jurymen was examined before he was sworn of the jury, whether he had contributed or advanced any moneys upon the propositions for Ireland, or was to have any share in the rebels' lands in Ireland, by act of Parliament, or otherwise. But likewise in permitting him to take his peremptory challenge to 35 of the 2 juries returned, without any particular cause alleged; which liberty—our laws allowing men, in *favorem vite*, and because there may be private causes of just exceptions to them known to the prisoner, not fit to be revealed, or for which he wants present proof, and that in cases of high treason, as well as of felony—the court thought just and equal to allow the same to him, though a notorious Irish rebel. (Ibid., pp. 691-693.)

4. The Bill of Rights of 1688. The house of Stuart had been expelled, and William had succeeded to the British throne. Great disturbances had arisen in the realm in consequence of the change of dynasty. Plots were formed in favor of James in all parts of England. The King's person was unsafe in London. He informed the Lords and Commons of the great dangers that threatened the Kingdom, and reminded them that he had no right to declare martial law, to suspend the writ of habeas corpus, or to seize and imprison his subjects on suspicion of treason or intended outbreak against the peace of the realm. He laid the case before them, and asked their advice and assistance. In answer Parliament passed the celebrated habeas corpus act. Since that day no King of England has dared to suspend the writ. It is only done by Parliament.

5. Gov. Wall. In the year 1782 Joseph Wall, governor of the British colony at Goree, in Africa, had under his command about 500 British soldiers. Suspecting that a mutiny was about to break out in the garrison he assembled them on the parade ground, held a hasty consultation with his officers, and immediately ordered Benjamin Armstrong, a private and suspected ringleader, to be seized, stripped, tied to the wheel of an artillery carriage, and to receive 800 lashes with a rope 1 inch in diameter. The order was carried into execution, and Armstrong died of his injuries. Twenty years afterwards Gov. Wall was brought before the most august civil tribunal of England to answer for the murder of Armstrong. Sir Archibald McDonald, Lord Chief Baron of the Court of Exchequer; Sir Soutden Lawrence, of the king's bench; and Sir Giles Rooke, of the common pleas, constituted the court. Wall's counsel claimed that he had the power of life and death in his hands in time of mutiny; that the necessity of the case warranted him in suspending the usual forms of law; that as governor and military commander in chief of the forces at Goree he was the sole judge of the necessities of the case. After a patient hearing before that high court he was found guilty of murder, was sentenced, and executed. (28 State Trials, p. 51; see also Hough's Military Law, pp. 537-540.)

I now ask your attention to analogous precedents in our own history.

1. On the 12th of June, 1775, Gen. Gage, the commander of the British forces, declared martial law in Boston. The Battles of Concord and Lexington had been fought two months before. The Colonial Army was besieging the city and its British garrison. It was but five days before the Battle of Bunker Hill. Parliament had, in the previous February, declared the Colonies in a state of rebellion. Yet, by the common consent of English jurists, Gen. Gage violated the laws of England, and laid himself liable to its penalty, when he declared martial law.

This position is sustained, in the opinion of Mr. Justice Woodbury, in *Luther v. Borden et al.* (7 Howard, 48). For a history of the transaction, see Annual Register for 1775, page 133.

2. On the 7th of November, 1775, Lord Dunmore declared martial law throughout the Commonwealth of Virginia. This was long after the Battle of Bunker Hill, and when war was flaming throughout the Colonies; yet he was denounced by the Virginia Assembly for having assumed a power which the King himself dared not exercise, as it "annuls the law of the land, and introduces the most execrable of all systems, martial law." Mr. Justice Woodbury declares (7 Howard, 65) the act of Lord Dunmore unwarranted by British law.

3. The practice of our Revolutionary fathers on this subject is most instructive. Their conduct throughout the great struggle for independence was equally marked by respect for civil law and jealousy of martial law. Indeed, it was one of the leading grievances set forth in the Declaration of Independence, that the King of Great Britain had "affected to render the military independent of, and superior to, the civil power"; and though Washington was clothed with almost dictatorial powers, he did not presume to override the civil law, or disregard the orders of the courts, except by express authority of Congress or the States. In his file of general orders, covering a period of five years, there are but four instances in which civilians appear to have been tried by a military court, and all these trials were expressly authorized by resolutions of Congress.

In the autumn of 1777, the gloomiest period of the war, a powerful hostile army landed on the shore of Chesapeake Bay for the purpose of invading Maryland and Pennsylvania. It was feared that the disloyal inhabitants along his line of march would give such aid and information to the British commander as to imperil the safety of our cause. Congress resolved "that the executive authorities of Pennsylvania and Maryland be requested to cause all persons within their respective States, notoriously disaffected, to be forthwith apprehended, disarmed, and secured till such time as the respective States think they can be released without injury to the common cause." The governor of Pennsylvania authorized the arrests, and many disloyal citizens were taken into custody by Washington's officers, who refused to answer the writ of habeas corpus which a civil court issued for the release of the prisoners. Very soon afterwards the Pennsylvania Legislature passed a law indemnifying the governor and the military authorities, and allowing a similar course to be pursued thereafter, on recommendation of Congress or the commanding officer of the Army. But this law gave authority only to arrest and hold—not to try; and the act was to remain in force only till the end of the next session of the general assembly. So careful were our fathers to recognize the supremacy of civil law and to resist all pretensions of martial law to authority.

4. I pass next to notice an event that occurred under the Confederation before the Constitution was adopted. I refer to Shays's rebellion, in 1787—that rebellion which was mentioned by Hamilton in the *Federalist* as a proof that we needed a strong central government to preserve our liberties. During all that disturbance there was no declaration of martial law, and the habeas corpus was only suspended for a limited time and with very careful restrictions. Gov. Bowdoin's order to Gen. Lincoln, on the 19th of January, 1787, was in these words:

Consider yourself in all your military offensive operations constantly as under the direction of the civil officer, save where any armed force shall appear to oppose your marching to execute these orders.

5. I refer next to a case under the Constitution, the rebellion of 1793 in western Pennsylvania. President Washington did not march with his troops until the judge of the United States district court had certified that the marshal was unable to execute his warrants. Though the parties were tried for treason, all the arrests were made by the authority of the civil officers. The orders of the Secretary of War stated that "the object of the expedition was to assist the marshal of the district to make prisoners." Every movement was made under the direction of the civil authorities. So anxious was Washington on this subject, that he gave his orders with the greatest care, and went in person to see that they were carefully executed. He issued orders declaring that "the Army should not consider themselves as judges or executioners of the laws, but only as employed to support the proper authorities in the execution of the laws."

6. I next refer to an incident connected with the Burr conspiracy, in 1807. The first developments of this plot were exceedingly alarming. Reports were forwarded to President Jefferson, and by him communicated confidentially to the Senate of the United States, with his recommendation that Congress pass a law authorizing the suspension, for a limited period, of

the writ of habeas corpus. On the 26th of January, the Senate, by a unanimous vote, passed a bill authorizing the suspension of the writ for three months, in cases of persons who were charged under oath with treason or misprision of treason. Thus carefully limited and restricted, the bill was sent, under the seal of secrecy, to the House of Representatives. When it was read, the doors were immediately opened; a motion was made to reject the bill, that it might not even reach its first reading; and, after a very able debate of five days, it was rejected by a vote of 113 to 19.

Not content, even, with that decided expression of sentiment, two weeks later, on the 17th of February, a resolution was introduced into the House ordering the Committee on the Judiciary "to bring in a bill more thoroughly to protect the rights of American citizens from arrest and imprisonment under color of authority of the President of the United States." After a very searching and able debate, it was concluded that existing laws afforded ample protection; but so anxious were the representatives of the people to place the safety of the citizen beyond the reach of doubt, that the resolution came within 2 votes of passing in the House. The vote stood 53 yeas to 60 nays; and that, too, in the very midst of the threatened conspiracy. (The full history of this legislative action will be found in Benton's Abridgment of Congressional Debates, vol. 3, pp. 504-542.)

I will remark in this connection, that, though President Jefferson recommended the passage of the act referred to, yet in his correspondence he had previously expressed the opinion that it was unwise, even in insurrection, to suspend the writ of habeas corpus. (Works, vol. 2, pp. 329, 355.)

So jealous were our people of any infringement of the rights of the citizen to the privileges of the writ, that in the very midst of the dangers at New Orleans Gen. Wilkinson was brought before a court there for having neglected promptly to obey a writ of habeas corpus.

7. I call the attention of the court for a moment to the discussion in Congress in relation to the action of Gen. Jackson, in 1814, at New Orleans. It will be remembered that, notwithstanding flagrant war was blazing around New Orleans when the general declared martial law, yet it was held that he had violated the sanctity of the courts, and he was fined accordingly. (For a full record of the law in the case, see 3 Martin's Lou. Rep., O. S., 530.) In 1842 a bill was introduced into Congress to reimburse him for the fine. The debate was very able and thorough. James Buchanan, then a Member of Congress, spoke in its favor, and no one will doubt his willingness to put the conduct of Jackson on the most favorable ground possible. I quote from his speech:

It had never been contended on this floor that a military commander possessed the power, under the Constitution of the United States, to declare martial law. No such principle had ever been asserted on this (the Democratic) side of the House. He had then expressly declared (and the published report of the debate, which he had recently examined, would justify him in this assertion) that he did not contend, strictly speaking, that Gen. Jackson had any constitutional right to declare martial law at New Orleans; but that, as this exercise of power was the only means of saving the city from capture by the enemy, he stood amply justified before his country for the act. We placed the argument not upon the ground of strict constitutional right, but of such an overruling necessity as left Gen. Jackson no alternative between the establishment of martial law and the sacrifice of New Orleans to the rapine and lust of the British soldiery. On this ground Mr. B. had planted himself firmly at the last session of Congress; and here he intended to remain. (Benton's Abridgment of the Debates of Congress, vol. 14, p. 628.)

All the leading Members took the same ground. It was not attempted to justify, but only to palliate and excuse the conduct of Jackson.

8. I call attention next to the opinions of our courts in regard to martial law and the suspension of the writ of habeas corpus, and first read from the opinion of Chief Justice Marshall in *Ex parte Bollman*: "If at any time the public safety should require the suspension of the powers vested * * * in the courts of the United States, it is for the legislature to say so. That question depends on political considerations, on which the legislature is to decide. Until the legislative will be expressed, the court can only see its duty, and must obey the laws." (4 Cranch, 101.)

I also cite the opinion of the late Chief Justice in *Ex parte Merryman* (9 American Law Register, 524), in which it was decided that the legislative authority alone could suspend the writ of habeas corpus. This decision was rendered in 1862, in the Maryland circuit.

I shall conclude these citations from our own judicial history by reading a few paragraphs from the opinion of Mr. Justice Woodbury in *Luther v. Borden et al.* (7 Howard, 1). The passage loses none of its force from the fact that it is part of a dissenting opinion; for the principles involved in it

were not strictly in issue, nor were they denied by the court. After stating his positions at length, the learned justice says:

For convincing reasons like these, in every country which makes any claim to political or civil liberty, "martial law," as here attempted, and as once practiced in England against her own people, has been expressly forbidden there for near two centuries, as well as by the principles of every other free constitutional Government. (1 Hallam's Const. Hist., 420.) And it would be not a little extraordinary if the spirit of our institutions, both State and National, was not much stronger than in England against the unlimited exercise of martial law over a whole people, whether attempted by any chief magistrate or even by a legislature.

My impression is that a state of war, whether foreign or domestic, may exist, in the great perils of which it is competent, under its rights and on principles of national law, for a commanding officer of troops under the controlling government to extend certain rights of war, not only over his camp, but its environs and the near field of his military operations. (6 American Archives, 186.) But no further nor wider. (Johnson v. Davis et al., 3 Martin, 530, 551.) On this rested the justification of one of the great commanders of this country and of the age, in a transaction so well known at New Orleans. But in civil strife they are not to extend beyond the place where insurrection exists. (3 Martin, 551.) Nor to portions of the State remote from the scene of military operations, nor after the resistance is over, nor to persons not connected with it. (Grant v. Gould et al., 2 H. Black., 69.) Nor even within the scene can they extend to the person or property of citizens against whom no probable cause exists which may justify it. (Sutton v. Johnston, 1 D. & E., 549; 7 Howard, 62, 83, 84.)

I can not leave this branch of my argument without fortifying my position by the authority of two of the greatest names on the roll of British jurists. To enable me to do this, I call attention to the celebrated trial of the Rev. John Smith, missionary at Demerara in British Guiana. In the year 1823 a rebellion broke out in Demerara, extending over some 50 plantations. The governor of the district immediately declared martial law. A number of the insurgents were killed, and the rebellion was crushed. It was alleged that the Rev. John Smith, a missionary sent out by the London Missionary Society, had been an aider and abettor of the rebellion. A court-martial was appointed, and, in order to give it the semblance of civil law, the governor general appointed the chief justice of the district as a staff officer, and then detailed him as president of the court to try the accused. All the other members of the court were military men, and he was made a military officer for the special occasion. Missionary Smith was tried, found guilty, and sentenced to be hanged. The proceedings came to the notice of Parliament, and were made the subject of inquiry and debate. Smith died in prison before the day of execution, but the trial gave rise to one of the ablest debates of the century, in which the principles involved in the cause now before this court were fully discussed. Lord Brougham and Sir James Mackintosh were among the speakers. In the course of his speech, Lord Brougham said:

No such thing as martial law is recognized in Great Britain, and courts founded on proclamations of martial law are wholly unknown. * * * Suppose I were ready to admit that, on the pressure of a great emergency, such as invasion or rebellion, when there is no time for the slow and cumbrous proceedings of the civil law, a proclamation may justifiably be issued for excluding the ordinary tribunals, and directing that offenses should be tried by a military court—such a proceeding might be justified by necessity; but it could rest on that alone. Created by necessity, necessity must limit its continuance. It would be the worst of all conceivable grievances—it would be a calamity unspeakable—if the whole law and constitution of England were suspended one hour longer than the most imperious necessity demanded. * * * I know that the proclamation of martial law renders every man liable to be treated as a soldier. But the instant the necessity ceases, that instant the state of soldiery ought to cease, and the rights, with the relations, of civil life to be restored. (Speeches of Henry, Lord Brougham (Edinburgh, 1838), vol. 2, pp. 70, 71.)

The speech of Sir James Macintosh, who was perhaps the very first English jurist of his day, is in itself a magazine of legal learning, and treats so fully and exhaustively the subject of martial law and military tribunals that I shall take the liberty of quoting several passages. I do this with less hesitation because I have found no argument so full and complete, and no authority more perfectly applicable to the cause before this court.

On the legality of the trial, sir, the impregnable speech of my learned friend (Lord Brougham) has left me little if anything to say. The only principle on which the law of England tolerates what is called "martial law" is necessity; its introduction can be justified only by necessity; its continuance requires precisely the same justification of necessity; and if it survives the necessity, in which alone it rests, for a single minute, it becomes instantly a mere exercise of lawless violence. When foreign invasion or civil war renders it impossible for courts of law to sit, or to enforce the execution of their judgments, it becomes necessary to find some rude substitute for them, and to employ for that purpose the military, which is the only remaining force in the community.

I desire to call particular attention to the sentences which lay down the chief condition that can justify martial law, and also mark the boundary between martial and civil law.

While the laws are silenced by the noise of arms, the rulers of the armed force must punish, as equitably as they can, those crimes which threaten their own safety and that of society, but no longer—every moment beyond is usurpation. As soon as the laws can act, every

other mode of punishing supposed crimes is itself an enormous crime. If argument be not enough on this subject—if, indeed, the mere statement be not the evidence of its own truth—I appeal to the highest and most venerable authority known to our law.

He proceeds to quote Sir Matthew Hale on martial law; and cites the case of the Earl of Lancaster, to which I have already referred, and then declares:

No other doctrine has ever been maintained in this country since the solemn Parliamentary condemnation of the usurpations of Charles I, which he was himself compelled to sanction in the Petition of Right. In none of the revolutions or rebellions which have since occurred has martial law been exercised, however much, in some of them, the necessity might seem to exist. Even in those most deplorable of all commotions which tore Ireland in pieces in the last years of the eighteenth century, in the midst of ferocious revolt and cruel punishment, at the very moment of legalizing these martial jurisdictions in 1799, the very Irish statute which was passed for that purpose did homage to the ancient and fundamental principles of the law in the very act of departing from them. The Irish statute (39 George III, chapter 3), after reciting "that martial law had been successfully exercised to the restoration of peace, so far as to permit the course of the common law partially to take place, but that the rebellion continued to rage in considerable parts of the Kingdom whereby it has become necessary for Parliament to interpose," goes on to enable the lord lieutenant "to punish rebels by courts-martial." This statute is the most positive declaration that where the common law can be exercised in some parts of the country martial law can not be established in others, though rebellion actually prevails in those others, without an extraordinary interposition of the supreme legislative authority itself.

I have already quoted from Sir Matthew Hale his position respecting the twofold operation of martial law—as it affects the army of the power which exercises it and as it acts against the army of the enemy. That great judge, happily unused to standing armies and reasonably prejudiced against military jurisdiction, does not pursue his distinction through all its consequences and assigns a ground for the whole which will support only one of its parts. "The necessity of order and discipline in an army" is, according to him, the reason why the law tolerates this departure from its most valuable rules; but this necessity only justifies the exercise of martial law over the army of our own State. One part of it has since been annually taken out of the common law and provided for by the mutiny act, which subjects the military offenses of soldiers only to punishment by military courts even in time of peace. Hence we may now be said annually to legalize military law, which, however, differs essentially from martial law, in being confined to offenses against military discipline and in not extending to any persons but those who are members of the army. Martial law exercised against enemies or rebels can not depend on the same principle, for it is certainly not intended to enforce or preserve discipline among them. It seems to me to be only a more regular and convenient mode of exercising the right to kill in war, a right originating in self-defense, and limited to those cases where such killing is necessary as the means of insuring that end. Martial law put in force against rebels can only be excused as a mode of more deliberately and equitably selecting the persons from whom quarter ought to be withheld in a case where all have forfeited their claim to it. It is nothing more than a sort of better-regulated decimation, founded upon choice, instead of chance, in order to provide for the safety of the conquerors, without the horrors of undistinguished slaughter; it is justifiable only where it is an act of mercy. Thus the matter stands by the law of nations. But by the law of England it can not be exercised except where the jurisdiction of courts of justice is interrupted by violence. Did this necessity exist at Demerara on the 15th of October, 1823? Was it on that day impossible for the courts of law to try offenses? It is clear that, if the case be tried by the law of England, and unless an affirmative answer can be given to these questions of fact, the court-martial had no legal power to try Mr. Smith.

After presenting arguments to show that a declaration of martial law was not necessary, the learned jurist continues:

For 6 weeks, then, before the court-martial was assembled, and for 12 weeks before that court pronounced sentence of death on Mr. Smith, all hostility had ceased, no necessity for their existence can be pretended, and every act which they did was an open and deliberate defiance of the law of England.

Where, then, are we to look for any color of law in these proceedings? Do they derive it from the Dutch law? I have diligently examined the Roman law, which is the foundation of that system, and the writings of those most eminent jurists who have contributed so much to the reputation of Holland. I can find in them no trace of any such principle as martial law. Military law, indeed, is clearly defined, and provision is made for the punishment by military judges of the purely military offenses of soldiers. But to any power of extending military jurisdiction over those who are not soldiers there is not an allusion. I will not furnish a subject for the pleasantries of my right honorable friend, or tempt him into a repetition of his former innumerable blunders, by naming the greatest of these jurists (Bynkershoek, of whose professional rank Mr. Canning had professed ignorance), lest his date, his occupation, and his rank might be again mistaken and the venerable president of the Supreme Court of Holland might be once more called a "clerk of the States-General." "Persecutio militis," says that learned person, "pertinet ad judicem militarem quando delictum sit militare, et ad judicem commune quando delictum sit commune." Far from supposing it to be possible that those who were not soldiers could ever be triable by military courts for crimes not military, he expressly declares the law and practice of the United Provinces to be that even soldiers are amenable for ordinary offenses against society to the court of Holland and Friesland, of which he was long the chief. The law of Holland, therefore, does not justify this trial by martial law.

Nothing remains but some law of the colony itself. Where is it? It is not alleged or alluded to in any part of this trial. We have heard nothing of it this evening. So unwilling was I to believe that this court-martial would dare to act without some pretense of legal authority that I suspected an authority for martial law would be dug out of some dark corner of a Guiana ordinance. I knew it was neither in the law of England nor in that of Holland, and I now believe that it does not exist even in the law of Demerara. The silence of those who are interested in producing it is not my only reason for this belief. I happen to have seen the Instructions of the States-General to their governor of Demerara in November, 1792, probably the last ever issued to such an officer by that illustrious and memorable assembly. They speak at large of councils of war, both for consultation and for judicature. They authorize these councils to try the military offenses of soldiers, and

therefore, by an inference which is stronger than silence, authorize us to conclude that the governor had no power to subject those who were not soldiers to their authority.

The result, then, is that the law of Holland does not allow what is called "martial law" in any case; and that the law of England does not allow it without a necessity, which did not exist in the case of Mr. Smith. If, then, martial law is not to be justified by the law of England, or by the law of Holland, or by the law of Demerara, what is there to hinder me from affirming, that the members of this pretended court had no more right to try Mr. Smith than any other 15 men on the face of the earth; that their acts were nullities, and their meeting a conspiracy; that their sentence was a direction to commit a crime; that if it had been obeyed, it would not have been an execution, but a murder; and that they, and all other parties engaged in it, must have answered for it with their lives? (Miscellaneous Works of the Rt. Hon. Sir James Mackintosh (London, 1851), pp. 734 et seq.)

May it please the court, many more such precedents as I have already cited might be added to the list, but it is unnecessary. They all teach the same lesson. They enable us to trace from its far-off source the progress and development of Anglo-Saxon liberty; its innumerable conflicts with irresponsible power; its victories, dearly bought, but always won—victories which have crowned with immortal honors the institutions of England and left their indelible impress upon the Anglo-Saxon mind. These principles our fathers brought with them to the New World and guarded with sleepless vigilance and religious devotion. In its darkest hour of trial, during the late Rebellion, the Republic did not forget them. So completely have they been impressed on the minds of American lawyers, so thoroughly have they been ingrained into the very fiber of American character, that notwithstanding the citizens of 11 States went off into wild rebellion, broke their oaths of allegiance to the Constitution, and levied war against their country, yet, with all their crimes upon them, there was still in the minds of those men during all the struggle, so deep and enduring an impression on this great subject that, even during their rebellion, the courts of the Southern States adjudicated causes like the one now before you in favor of the civil law and against courts-martial established under military authority for the trial of citizens. In Texas, Mississippi, Virginia, and other insurgent States, by the order of the rebel President, the writ of habeas corpus was suspended, martial law was declared, and provost marshals were appointed to exercise military authority. But when civilians, arrested by military authority, petitioned for release by writ of habeas corpus, in every case save one the writ was granted, and it was decided that there could be no suspension of the writ or declaration of martial law by the Executive, or by any other than the supreme legislative authority. The men who once stood high on the list of American lawyers, such as Alexander H. Stephens, Albert Pike, and Gen. Houston, wrote letters and made speeches against the practice until it was abandoned. In the year 1862 the commander in chief of the rebel armies, compelled by the force of public sentiment, published a general order disclaiming any right or claim of right to establish martial law or suspend the writ of habeas corpus without the authority of the rebel congress.

I said there was one exceptional instance. A judge of the Supreme Court of Texas, in the first excitement of the Rebellion, refused to issue a writ of habeas corpus to release from military arrest a citizen charged with disloyalty to the rebel government. He wrote his opinion and delivered it; but he was so much agitated when he found that he stood alone among judges on that great question of human rights that he went to the book of records in which his opinion was recorded, and with his own hand plucked the leaves from the volume and destroyed them. He also destroyed the original copy, that it might never be put in type, and, having destroyed everything but the remembrance of it, ended his life by suicide. I believe he alone among rebel judges ventured to recognize martial law declared without legislative authority.

The spirit of liberty and law is well embodied in this one sentence of De Lolme: "The arbitrary discretion of any man is the law of tyrants; it is always unknown, it is different in different men, it is casual, and depends upon constitution, temper, and passion; in the best it is oftentimes caprice; in the worst it is every vice, folly, and passion to which human nature is liable." (Rise and Progress of the English Constitution (London, 1838), vol. 1, p. 455.) And yet, if this military commission could legally try these petitioners, its authority rested only upon the will of a single man. If it had the right to try these petitioners, it had the right to try any civilian in the United States; it had the right to try your honors, for you are civilians.

The learned gentlemen tell us that necessity justifies martial law. But what is the nature of that necessity. If, at this moment, Lee, with his rebel army at one end of Pennsylvania Avenue, and Grant, with the Army of the Union at the other, with hostile banners and roaring guns, were approaching this Capitol, the sacred seat of justice and law, I have no doubt they would expel your honors from the bench, and the Senate and

House of Representatives from their halls. The jurisdiction of battle would supersede the jurisdiction of law. This court would be silenced by the thunders of war.

If an earthquake should shake the city of Washington and tumble this Capitol in ruins about us, it would drive your honors from the bench, and, for the time, volcanic law would supersede the Constitution.

If the supreme court of Herculaneum or Pompeii had been in session when the fiery ruin overwhelmed those cities, its authority would have been suddenly usurped and overthrown; but I question the propriety of calling that law which, in its very nature, is a destruction or suspension of all law.

From this review of the history and character of martial law I am warranted, by the uniform precedents of English law for many centuries, by the uniform practice of our fathers during the Colonial and Revolutionary periods, by the unanimous decisions of our courts under the Constitution, and by the teachings of our statesmen, to conclude—

1. That the Executive has no authority to suspend the writ of habeas corpus, or to declare or administer martial law; much less has any military subordinate of the Executive such authority; but these high functions belong exclusively to the supreme legislative authority of the Nation.

2. That if, in the presence of great and sudden danger, and under the pressure of overwhelming necessity, the Chief Executive should, without legislative warrant, suspend the writ of habeas corpus, or declare martial law, he must not look to the courts for justification, but to the legislature for indemnification.

3. That no such necessity can be pleaded to justify the trial of a civilian by a military tribunal when the legally authorized civil courts are open and unobstructed.

It will be observed that in this discussion I have not alluded to the legal status of citizens of those States which were declared, both by the legislative and executive departments of the Government, to be in rebellion against the United States. It has been fully settled, not only by the other coordinate branches of the Government, but by this court, that those States constituted a belligerent government de facto, against which the Federal Government might proceed with all the appliances of war, and might extend absolute military jurisdiction over every foot of rebel territory. But the military jurisdiction thus conferred by the Government did not extend beyond the territory of the rebellious States, except where the tide of war actually swept beyond those limits, and by its flaming presence made it impossible for the civil courts to exercise their functions. The case before your honors comes under neither of these conditions; hence the laws of war are inapplicable to it.

The military commission, under our Government, is of recent origin. It was instituted by Gen. Scott in Mexico to enable him, in the absence of any civil authority, to punish Mexican and American citizens for offenses not provided for in the Rules and Articles of War. The purpose and character of a military commission may be seen from his celebrated Order No. 20, published at Tampico. It was no tribunal with authority to punish, but merely a committee appointed to examine an offender and advise the commanding general what punishment to inflict. It is a rude substitute for a court of justice in the absence of civil law.

Even our own military authorities, who have given so much prominence to these commissions, do not claim for them the character of tribunals established by law. The Judge Advocate General says: "Military commissions have grown out of the necessities of the service, but their powers have not been defined, nor their mode of proceeding regulated by any statute law. * * * In a military department the military commission is a substitute for the ordinary State or United States court, when the latter is closed by the exigencies of war, or is without the jurisdiction of the offense committed." (Digest of Opinions for 1863, pp. 131, 133.)

The only ground on which the learned counsel attempt to establish the authority of the military commission to try these petitioners is that of the necessity of the case. I answer, there was no such necessity. Neither the Constitution nor Congress recognized it. I point to the Constitution as an arsenal stored with ample powers to meet every emergency of national life. No higher test of its completeness can be imagined than has been afforded by the great Rebellion, which dissolved the municipal governments of 11 States and consolidated them into a gigantic traitorous government de facto, inspired with the desperate purpose of destroying the Government of the United States.

From the beginning of the Rebellion to its close, Congress, by its legislation, kept pace with the necessities of the Nation. In 16 carefully considered laws the National Legislature under-

took to provide for every contingency, and to arm the Executive at every point with the solemn sanction of law. Observe how perfectly the case of the petitioners was covered by the provisions of law.

The first charge against them was "conspiracy against the Government of the United States." In the act approved July 31, 1861, that very crime was fully defined and placed within the jurisdiction of the District and Circuit Courts of the United States.

Charge 2: "Affording aid and comfort to rebels against the Government of the United States." In the act approved July 17, 1862, this crime is set forth in the very words of the charge, and it is provided that "such person shall be punished by imprisonment for a period not exceeding 10 years, or by a fine not exceeding \$10,000, and by the liberation of all his slaves, if any he have; or by both of said punishments, at the discretion of the court."

Charge 3: "Inciting insurrection." In Brightly's Digest (vol. 2, pp. 191-202) there is compiled from 10 separate acts a chapter of 64 sections on insurrection, setting forth, in the fullest manner possible, every mode by which citizens may aid in insurrection, and providing for their trial and punishment by the regularly ordained courts of the United States.

Charge 4: "Disloyal practices." The meaning of this charge can only be found in the specifications under it, which consist in discouraging enlistments and making preparations to resist a draft designed to increase the Army of the United States. These offenses are fully defined in the thirty-third section of the act of March 3, 1863, "for enrolling and calling out of the national forces," and in the twelfth section of the act of February 24, 1864, amendatory thereof. The provost marshal is authorized to arrest such offenders, but he must deliver them over for trial to the civil authorities. Their trial and punishment are expressly placed in the jurisdiction of the District and Circuit Courts of the United States.

Charge 5: "Violations of the laws of war," which, according to the specifications, consisted of an attempt, through a secret organization, to give aid and comfort to rebels. This crime is amply provided for in the laws referred to in relation to the second charge. But Congress did far more than to provide for a case like this. Throughout the 11 rebellious States it clothed the military department with supreme power and authority. State constitutions and laws, the decrees and edicts of courts, were all superseded by the laws of war. Even in States not in rebellion, but where treason had a foothold, and hostile collisions were likely to occur, Congress authorized the suspension of the writ of habeas corpus and directed the Army to keep the peace.

But Congress went further still, and authorized the President, during the Rebellion, whenever, in his judgment, the public safety should require it, to suspend the privilege of the writ of habeas corpus in any State or Territory of the United States, and order the arrest of any persons whom he might believe dangerous to the safety of the Republic and hold them till the civil authorities could examine into the nature of their crimes. But this act of March 3, 1863, gave no authority to try the person by any military tribunal, and it commanded judges of the circuit and district courts of the United States, whenever the grand jury had adjourned its sessions, and found no indictment against such persons, to order their immediate discharge from arrest. All these capacious powers were conferred upon the military department, but there is no law on the statute book in which the tribunal that tried the petitioners can find the least recognition.

I wish to call the attention of your honors to a circumstance showing the sentiment on this subject of the House of Representatives of the Thirty-eighth Congress. Near the close of that Congress, when the miscellaneous appropriation bill, which authorized the disbursement of several millions of dollars for the civil expenditures of the Government, was under discussion, the House of Representatives, having observed with alarm the growing tendency to break down the barriers of law, and desiring to protect the rights of citizens as well as to preserve the Union, added to the appropriation bill the following section: "And be it further enacted, That no person shall be tried by court-martial or military commission in any State or Territory where the courts of the United States are open, except persons actually mustered or commissioned or appointed in the military or naval service of the United States, or rebel enemies charged with being spies."

The section was debated at length in the Senate, and, although almost every Senator acknowledged its justice, yet, as the Nation was then in the very mid-whirl and fury of the war, it was feared that the Executive might thereby be crippled, and the section was stricken out. The bill came back to the House; conferences were held upon it, and, finally, in the last hour of the session, the

House deliberately determined that, important as the bill was to the interests of the country, they preferred it should not become a law if that section were stricken out. I beg leave to read some passages from the remarks of one of the noblest, ablest, and most patriotic men that have honored this Nation during the war—that great man, so lately taken from us, Henry Winter Davis, of Maryland. After reporting the provisions of the bill agreed upon by the committee of conference, he said:

Under these circumstances it remained for a majority of the House committee to determine between the great result of losing an important appropriation bill, or, after having raised a question of this magnitude, touching so nearly the right of every citizen to his personal liberty and the very endurance of republican institutions, and to insure its prompt consideration fastened it on an appropriation bill, to allow it to be stricken out of the bill as a matter of secondary importance. The committee thought that their duty to their constituents, to the House, and to themselves would not allow them to provide for any pecuniary appropriations at the expense of so grave a reflection upon the fundamental principles of the Government.

The practice of the Government has introduced into the jurisprudence of the United States principles unknown to the laws of the United States, loosely described under the general term of the rules and usages of war, and new crimes, defined by no law, called "military offenses"; and without the authority of any statute, constitutional or unconstitutional, and pointing these laws—confined by the usage of the world to enemies in enemies' territory—against our own citizens in our own territory, has repeatedly deprived many citizens of the United States of their liberty, has condemned many to death, who have only been redeemed from that extreme penalty by the kindness of the President's heart, and aided doubtless by the serious scruples he can not but feel touching the legality of the judgment that assigned them to death.

There have been many cases in which judgments of confinement in the penitentiary have been inflicted for acts not punishable, either under the usages of war or under any statute of the United States, by any military tribunal; crimes for which the laws of the United States prescribe the punishment have been visited with other and severer punishments by military tribunals; violations of contract with the Government, real or imputed, have been construed by these tribunals into frauds, and punished as crimes; excessive bail has been demanded, and when furnished impudently refused; and the attempt of Congress to discriminate between crimes committed by persons in the military forces and citizens not in those forces, has been annulled, and the very offenses it specifically required to be tried before the courts of the United States have been tried before military tribunals dependent upon the will of the President.

The committee remember that such things are inconsistent with the endurance of republican government. The party which tolerates or defends them must destroy itself or the Republic. They felt they had reached a point at which a vote must be cast which may break up political parties, or, if it do not, will break up or save a great republican government. Before these alternatives they could not hesitate. They thought it best now, at this time, to leave this law standing as a broken disk in the midst of the rising flood of lawless power around us, to show to this generation how high that flood of lawless power has risen in only three years of civil war, as a warning to those who are to come after us, as an awakening to those who are now with us.

They have, therefore, come to the determination, so far as the constitutional privileges and prerogatives of this House will enable them to accomplish the result, that this bill shall not become a law if these words do not stand as a part of it—the affirmation by the representatives of the States and of the people of the inalienable birthright of every American citizen; and on that question they appeal from the judgment of the Senate to the judgment of the American people. (Congressional Globe, Mar. 3, 1865, pp. 1421, 1422.)

The appeal was taken, the bill failed, and the record of its failure is an emphatic declaration that the House of Representatives have never consented to the establishment of any tribunals except those authorized by the Constitution of the United States and the laws of Congress.

There was one point, suggested rather than insisted upon by the opposing counsel, which it requires but little more than a statement to answer. In their brief the learned gentlemen say that, if the military tribunal had no jurisdiction, the petitioners may be held as prisoners captured in war, and handed over by the military to the civil authorities, to be tried for their crimes under the acts of Congress and before the courts of the United States. The answer to this is that the petitioners were never enlisted, commissioned, or mustered in the service of the Confederacy; nor had they been within the rebel lines, or within any theater of active military operations; nor had they been in any way recognized by the rebel authorities as in their service. They could not have been exchanged as prisoners of war; nor, if all the charges against them were true, could they be brought under the legal definition of spies. There appears to be no ground whatever for calling them prisoners of war. The suggestion of our opponents, that the petitioners should be handed over to the civil authorities for trial, is precisely what they petitioned for, and what, according to the laws of Congress, should have been done. We do not ask that they shall be shielded from any lawful punishment, but that they shall not be unlawfully punished, as they now are, by the sentence of a tribunal which had no jurisdiction over either their persons or the subject matter of the charges.

The only color of authority for such a trial was found in the President's proclamation of September 24, 1862, which was substantially annulled by the habeas corpus act of March 3, 1863, and the subsequent presidential proclamation of September 15, 1863. By these acts the military authority could only arrest

and hold disaffected persons till after a session of the United States district court.

May it please the court, I have thus reviewed the principles upon which our Government was founded, the practice of the fathers who founded it, and the almost unanimous sentiment of its Presidents, Congresses, and courts.

I have shown that Congress undertook to provide for all the necessities which the Rebellion imposed upon the Nation; that it provided for the trial of every crime imputed to the petitioners, and pointed out expressly the mode of punishment. There is not a single charge or specification in the petition before you—not a single allegation of crime—that is not expressly provided for in the laws of the United States; and the courts are designated before which such offenders may be tried. These courts were open during the trial, and had never been disturbed by the Rebellion. The military commission, on the tenth day of its session, withdrew from the room where it had been sitting, that the Circuit Court of the United States might hold its regular term in its own chamber. For the next 10 days the commission occupied, by permission, the chamber of the Supreme Court of the State of Indiana, but removed to another hall when the regular term of that court began. This military commission sat at a place 200 miles beyond the sound of a hostile gun, in a State that had never felt the touch of martial law—that had never been defiled by the tread of a hostile rebel foot, except on a remote border, and then but for a day. That State, with all its laws and courts, with all its securities of personal rights and privileges, is declared by the opposing counsel to have been completely and absolutely under the control of martial law; that not only the constitution and laws of Indiana but the Constitution and laws of the United States were wholly suspended, so that no writ, injunction, prohibition, or mandate of any district or circuit court of the United States, or even of this august tribunal, was of any binding force or authority whatever, except by the permission and at the pleasure of a military commander.

Such a doctrine, may it please the court, is too monstrous to be tolerated for a moment; and I trust and believe that when this cause shall have been heard and considered it will receive its just and final condemnation. Your decision will mark an era in American history. The just and final settlement of this great question will take a high place among the great achievements which have immortalized this decade. It will establish forever this truth, of inestimable value to us and to mankind, that a Republic can wield the vast enginery of war without breaking down the safeguards of liberty; can suppress insurrection, and put down rebellion, however formidable, without destroying the bulwarks of law; can, by the might of its armed millions, preserve and defend both nationality and liberty. Victories on the field were of priceless value, for they plucked the life of the Republic out of the hands of its enemies; but

Peace hath her victories
No less renowned than war,

and if the protection of law shall, by your decision, be extended over every acre of our peaceful territory, you will have rendered the great decision of the century.

When Pericles had made Greece immortal in arts and arms, in liberty and law, he invoked the genius of Phidias to devise a monument which should symbolize the beauty and glory of Athens. That artist selected for his theme the tutelary divinity of Athens, the Jove-born goddess, protectress of arts and arms, of industry and law, who typified the Greek conception of composed, majestic, unrelenting force. He erected on the heights of the Acropolis a colossal statue of Minerva, armed with spear and helmet, which towered in awful majesty above the surrounding temples of the gods. Sailors on far-off ships beheld the crest and spear of the goddess, and bowed with reverent awe. To every Greek she was the symbol of power and glory. But the Acropolis, with its temples and statues, is now a heap of ruins. The visible gods have vanished in the clearer light of modern civilization. We can not restore the decayed emblems of ancient Greece; but it is in your power, O Judges, to erect in this citadel of our liberties a monument more lasting than brass—invisible indeed to the eye of flesh, but visible to the eye of the spirit as the awful form and figure of Justice, crowning and adorning the Republic; rising above the storms of political strife, above the din of battle, above the earthquake shock of rebellion; seen from afar, and hailed as protector by the oppressed of all nations; dispensing equal blessings, and covering with the protecting shield of law the weakest, the humblest, the meanest, and, until declared by solemn law unworthy of protection, the guiltiest of its citizens.

At the second session of the Thirty-eighth Congress a resolution was adopted directing the Military Committee to "inquire and

report to the House what legislation or action, if any, is necessary to secure to persons arrested and imprisoned by military authority a prompt examination into the causes of the arrest, and their discharge if there be no adequate cause for their detention, and a speedy trial where there is such cause." Upon a motion to reconsider this resolution, January 18, 1865, Mr. Garfield said:

"I wish to make two observations. First of all, I agree with what the gentleman from Maryland [Mr. Davis] has just said; and in illustration of what I desire to say I call attention to a bill that passed the House last session, but did not pass the Senate, and which, in my judgment, is vitally important as a means to preserve the independence of the officers of our armies. Early in the war it will be remembered Congress, for good reasons, gave to the President the power of summary dismissal when he believed the public service would be subserved thereby. At that time the Army was full of traitors, and it was necessary that by a more summary process than court-martial they should be driven out.

"But it was thought last winter by the House of Representatives that the danger had so far passed that we might safely repeal the law. Important as that law has been in some respects—and none will doubt its value and necessity at the time of its enactment—I am satisfied that in other respects it has had a very unfortunate influence. It has gone very far toward weakening the manliness and independence of the officers in the Army. If, sir, I am in the Army, and know that my superior officer can make such representations as will cause me to be dismissed without a hearing and without a trial, how strong is the tendency of that knowledge to make me a timid, subservient fool! The whole tendency of it is to take away the personal independence and manliness of the subordinate officer, because he has no guard for his standing and position except the favor of his superior—no right to demand, as the American officer always had in former times, that he should be speedily and fairly tried by a jury of his peers. For this reason we passed a bill last winter, by a very large majority—almost unanimously, I believe—to repeal the law giving this power to the President. That bill is dying a lingering death at the other end of the Capitol. I believe that the bill ought to become a law.

"I desire, in the second place, to call attention to the fact that it is now the law, and has been since the foundation of our Government, that when an officer of the Army is arrested for any supposed crime or misdemeanor, he shall be held in arrest—it may be in close confinement and under guard, according to the enormity of the supposed offense—no longer than eight days without being furnished with a copy of the charges against him. The law also allows him a speedy trial.

"Now, without trenching upon the business in which the Committee on Military Affairs was engaged this morning, I will say that one officer at least has been in confinement for five months within sight of this Capitol. Both he and his keeper declare that he has not been furnished with a copy of the charges against him. He says that he has again and again demanded in vain to know with what crime he was charged. He is a man who bears upon his person honorable scars received in the service of his country; he is a colonel; and the vengeance of some one fell upon him, like a bolt from a clear sky. He declares that he knows no reason for it and can learn none. An agent of the War Department, an officer unknown to the laws and Constitution of the country, lays his hand upon a man, puts him in prison, where he is kept until said agent, or some power above him, is pleased to release him. There are plenty of alleged cases where officers and citizens, after being confined for a long period, have been allowed to go out without a word of explanation concerning either the arrest or the discharge.

"I ask the House of Representatives whether that kind of practice is to grow up under this Government, and no man is to raise his voice against it, or make any inquiry concerning it, lest some one should say he is factious, unfriendly to the War Department, and opposing the administration. Gentlemen, if we are not men in our places here, let us stop our ears to all complaints; let every department do as it pleases; and in meekness and in silence let us vote whatever appropriations are asked for. I do not say, for I do not know, that the head of any department is responsible for these things, or knows them. It may be they have been done by subordinates. It may be the heads of departments are not cognizant of the facts. I make no accusations; but I do say that it is our business to see that the laws be respected, and that if a man has no powerful friend in court he shall at least find the Congress of the United States his friend. I hope the resolution will not be reconsidered."

The Right of Congress Under the Constitution to Tax Bonds and Securities Issued by States and Municipalities and the Salaries of State and Municipal Officials—An Argument Against the Constitutionality of Such a Tax, by ex-President Taft.

EXTENSION OF REMARKS

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 19, 1918.

Mr. SMALL. Mr. Speaker, under leave to extend my remarks in the Record I wish to print an article by ex-President William Howard Taft, which was published in the Philadelphia Public Ledger in its issue of October 18, 1918. This distinguished gentleman presents a very clear and convincing argument against the constitutional power of Congress to tax State and municipal bonds and the salaries of State and municipal officers. This argument is most timely, because the pending war-revenue bill as reported by the House Committee on Ways and Means and passed by the House contained a provision of this kind. Ex-President Taft is not only a very distinguished and learned lawyer, but a publicist of distinction, whose opinions are entitled to weighty consideration. I hope that the article will at least be read by each Member of Congress.

The article is as follows:

STATE AND CITY SALARIES ARE EXEMPT FROM WAR TAX.—HOUSE COMMITTEE'S EAGERNESS TO FIND SOURCES OF REVENUE TREADS ON SUPREME COURT RULINGS.

[By William Howard Taft.]

In its eagerness to find new sources of revenue the Ways and Means Committee of the House has brought within the range of the income tax State and municipal bonds and the salaries of State and municipal officers. This is in the teeth of so many judgments of the Supreme Court of the United States that it would seem almost to be a flaunting of that high and final tribunal by a coordinate branch of the Government. Those who have, however, a conscientious respect for the Constitution and its interpretation by the Supreme Court seek to distinguish this formidable long line of cases. Senator KNOX has contended for a latitudinarian construction of the war powers of Congress to the extent of claiming that existing limitations upon the powers of Congress to tax, expressly given in the Constitution or implied by the Supreme Court, do not apply in the exigency of war; while others, especially in the House, contend that the sixteenth amendment changed the whole situation.

Senator Kellogg, of Minnesota, in a convincing speech has demonstrated the fallacy of both of these contentions.

The sixteenth amendment is as follows:

"The Congress shall have power to lay and collect taxes on income, from whatever source derived, without apportionment among the several States and without regard to the census or enumeration."

It is contended the words "from whatever source derived" open to taxation State agencies to the fullest extent. Senator KELLOGG shows most clearly that at the time this clause was adopted there was not the slightest suggestion by any one of the need or purpose to include within the income tax State bonds and State officers' salaries or that their then exemption was any real abuse. The words had a very different significance, growing out of the discussions of the validity of the income tax. The arguments and opinions in the income-tax cases are full of the alleged difference between incomes from real estate, from personality, or from personal services. No one, indeed, ever raised the question of applying the words to State and municipal bonds until Gov. Hughes, of New York, suggested the possibility of such a construction, after the amendment had passed both Houses. The suggestion was met by a letter from Senator Root and by a speech of Senator BORAH. The Legislature of the State of New York accepted Mr. Root's view and approved the amendment.

The Constitution gives a very wide power of taxation to Congress. There are only three express limitations. One is that the taxes, duties, imposts, and excises shall be geographically uniform in the United States.

The second is that there shall be no tax on exports from a State to foreign countries, and the third is that direct taxes shall be apportioned according to the population of the States. A fourth and implied limitation laid down by the Supreme Court for more than 50 years and first declared when the country was torn in war is that, as we have a dual Government, Federal and State, the State may not tax strictly Federal governmental agencies, either loans or Federal officers' salaries; and, per contra, that the Federal Government may not tax State loans or strictly State governmental agencies, as the salaries of State officers. This has become so clear that it may be read as part of the Constitution. Never before has it been suggested that this limitation or any other tax limitation is contained in the very clause which gives the wide power of Congress to tax for the common defense. That is certainly taxation for war. The clause reads:

"To lay * * * taxes, duties, imposts, and excises * * * to provide for the common defense * * * but all duties, imposts, and excises shall be uniform throughout the United States." It is thus impossible to separate from the power to tax for the common defense the limitations as to uniformity. If the uniformity clause applies in war, the other limitations which are in pari materia must also apply.

The theory that in some way or other the Constitution is suspended during war would lead us into a mere congressional dictatorship. The maxim "inter arma silent leges" is a most dangerous doctrine in a republic if carried to such an extreme. It proceeds on the assumption that the Constitution was framed for peace and not for war. This is wholly erroneous. The Constitution by its terms is an instrument to serve the Republic both in war and in peace. It grants to Congress the right to levy taxes, to provide for the common defense, to declare war, grant letters of marque and reprisal, to make rules concerning captures on land and sea, to raise and support armies and a navy, and to organize an army, to call out a militia, and to suppress insurrections and repel invasions. It recognizes the existence of a power to suspend the writ of habeas corpus when in case of rebellion or invasion the public safety requires it. It provides that in time of war no soldier shall be quartered in any house except in a manner prescribed by law. With these many provisions for war clearly before us, what right have we to say that our fundamental law justifies a suspension of its clear limitations in time of war unless we can point to some power conferred upon Congress authorizing it?

The Constitution does confer on Congress the right to declare war and to carry it on. This necessarily brings within its power control of subject matter which assumes an exceptional national bearing of importance in time of war. Congress, under such a power, may invade fields of legislation which are committed exclusively to the State in peace, but which in war plainly become a direct war instrumentality. Such is the matter of the supply of food. It is a legitimate instrument of war to interfere with the food supply of a country by blockading her ports and obstructing her commerce with nations supplying her food. Therefore, in conducting a war effectively Congress may adopt measures, operating directly on the whole people, to husband resources, to stimulate food production, and to divide the food between this country and our allies.

Such measures are clearly necessary to maintain the morale of the armies and the peoples of our allies, so that we may win the war. For the same reason the manufacture of intoxicating liquors which consume food material may be prohibited in the Nation by congressional act, although the act would be null and void in time of peace. So, too, the sale of such liquors may be prohibited as a war measure to prevent demoralization of our military forces. Similarly copper, iron, cotton, and wool may all be important substances in the making of war equipment and preparation. Their production and their price may be taken under national control to husband them for the particular uses to which it is necessary to devote them in carrying on the war.

These measures are necessary and proper to execute the congressional power to conduct the war. So to hold is not to suspend the Constitution, but merely to proceed in accord with its provisions for war emergency. Nor is it to say that Congress may completely upset the balance between the Federal and State Governments or may use its power of taxation to destroy State agencies of government. It is entirely possible under the wise provisions of our Constitution to conduct a war as effectively as it can be conducted under any Government. No suspension of it is necessary. If Congress persists in disregarding the Constitution it is pleasing to know that the Supreme Court may promptly maintain the supremacy of the Constitution by annulling such plain violations of it.

EXTENSION OF REMARKS

OF

HON. JAMES C. WILSON,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 19, 1918.

Mr. WILSON of Texas. Mr. Speaker, under the leave granted by the House I insert in the CONGRESSIONAL RECORD an interview which I gave out relative to my recent trip to England, France, and Italy during the months of July and August of this year, and exactly as the interview appeared on the 6th of this month in the Dallas News, published at Dallas, Tex., and in other Texas papers, as follows:

TEXAS CONGRESSMAN TELLS OF EUROPE'S BATTLE FIELDS.

[By Mary Kunceler Brookes, special correspondent of the News.]

WASHINGTON, October 2.

Representative JAMES C. WILSON, of Fort Worth, who has just returned to Washington from a tour of Europe, made with the Naval Affairs Committee of the House, of which he is a member, has come back one of the best informed of the many Americans who have visited England and the battle areas of the Continent.

Mr. WILSON, realizing the importance of getting information into usable shape at the immediate time of acquirement, kept a most complete diary of each day of his journeyings, with the result that he brought back with him—the one member of his party to do so—10 rather large notebooks closely written with information, intimate details, and personal impressions of every place he visited and every personage with whom he came in contact.

"In England," said Mr. WILSON, "we had not an especially good opportunity of judging what exact conditions are relative to the food and material resource situation, since we were guests of the Government, and naturally whatever scarcity or lack there might have been in any particular we would not have been permitted to sense it. In France, however, traveling in five automobiles with a supply automobile in the rear, all painted battleship gray and all marked 'U. S. A.' but going to all intents and purposes entirely unofficially, we were able to observe very closely the actual conditions which prevail.

"We were all amazed at the evidence of abundance of food on every hand. Though it is true that the very garden lands of France are only a desert waste of trenches and shell holes, it is also true that the French women, rising to the emergency in far more splendid fashion than might be expected of the women of any nation, have literally put the whole tillable area of France under cultivation. It seems to me that there is not a spot in France as big as a handkerchief where there is not something growing, and the women are doing the work with a little help from the very old men, the very young boys, and the men sent home for the brief rest periods from life on the front. Sugar is scarce and salt almost as scarce as sugar; fats are not plentiful, and of course the supply of food is limited, but France is doing her part toward feeding herself most magnificently. To be sure France nor any other part of Europe would not have been able to have warded off starvation but for the assistance in supplies which we have been able to give them. But it is gratifying to know how splendidly France has striven to be self-sustaining and how much we have been able to aid with such a very slight sacrifice to ourselves.

AMERICANS ARE WELCOME.

"And the feeling that France has for America and Americans is a thing which must be experienced to be fully appreciated. Wherever an American appears, whether he is in uniform or not, he is greeted with the greatest enthusiasm. All along our way, wherever we stopped, the people, mostly women and children, to be sure, rushed out of the houses just to see us and to throw flowers and kisses after the autos when we left. One sight which I shall never forget happened when we stopped overnight well in the interior of France. In the early morning we were awakened by the sound of marching men, and, going to the windows, we saw 1,200 or more French soldiers, veterans of many battles, furloughed home for a short rest, and at that moment mobilized for the return to the front. They were drawn up in the street below our windows, singing that wonderful marching song of the French, 'Madelon,' and in the muzzle of each gun, shining in the early morning light, was either a glowing white lily of France or a small American flag, with the flags very much outnumbering the lilies.

"But that has not always been true of the feelings of the French for us. At first, as I learned from those who have been there from the earliest days of our entry into the war, the French, and the British, too, for that matter, were very much disappointed at the part which they thought we intended to play in the war. Our men arrived, and our tremendous stores arrived, but our men didn't go to the front. There was no move to send the men to the front. Instead, by the thousands they were set to work building docks and supply depots and lines of communication and repairing roads and building bridges and altogether getting laid the tremendous foundation for the mighty things we had planned to do. But the French and the British couldn't see the plan—they were so desperately in need of immediate assistance that they could see nothing but the failure of that assistance in fighting strength. The feeling spread that to supply them in a material way and to achieve great things in engineering and construction was the extent of what they might hope for from us. In their opinion we would supply money and we would work, but we wouldn't fight.

"Then came the time when Gen. Pershing had completed the preliminaries for America's great part in the conflict. American men were sent to the front. What happened we all know. The way they fought electrified all Europe. The way they fought made us at home at once proud and humble, gave us a new faith, and a reconsecration to the ideals and traditions which we ourselves thought we as a Nation had almost forgot. And it was as a new birth of the spirit to all our allies.

AMERICANS SURPRISE EUROPE.

"With the first engagement in which the American boys participated our allies understood the vision with which we had planned, the genius with which we had executed, and the glorified spirit with which our boys fought, and the dauntless courage with which they died for an ideal. Truly unto us as a Nation has been given the God-granted privilege of writing the greatest page in the world's history in the blood of our matchless sons.

"It was the King of England who said to our party when we were received at Buckingham Palace, 'You will never know what your Army has been in morale to all the allies. The record of the American Army in battle, an Army which has never lost a battle and never given an inch, is an inspiration which will last not only throughout the war but throughout the life of every man who has come in touch with those magnificent young fighters you have sent to our aid.'

"The British premier, Mr. David Lloyd-George, invited us not to a reception but to a conference, and when he received us at 10 Downing Street he remarked that it was interesting to note

that it was in that dim old room that every momentous matter in English modern history had been settled. 'It was in this very room,' remarked Mr. George, 'that Lord North and Lord Chatham met in their famous discussion as to the proper course to take regarding the colonies in America. As we all know, it was the fact that Lord North's opinion prevailed that brought on the American Revolution, and no matter what we may think, looking back upon Lord North's decision in the light of incidents immediately surrounding it, I am sure in the light of later and especially present developments, there are none of us on either this side or the other side of the water who regret that Lord North did dominate the council.'

CLEMENCEAU'S REMARKS.

"It was that splendid old statesman, Clemenceau, who said to us: 'It is the most interesting thing in history, it seems to me, that you Americans, having fought to establish your own liberties, should now in a little more than a century be fighting to help give that same sort of liberty to all other peoples. To be sure, we, too, in France, had our revolution, but we had the immediate and wonderful example of your success and your newly created Government, a Government like unto nothing else in all the world, when your supremely inspired statesmen conceived and formulated it and gave it as the model and the inspiration and the hope of liberty to all peoples everywhere.'

"In Italy when we were received by Premier Orlando it was the same story in different words. 'What we fight for,' he said, 'and what you so gallantly and so generously are fighting that all peoples everywhere may have, is summed up in your Bill of Rights. Your Government and its fundamentals are the ideals which we would achieve, but which we could not have achieved without the aid and the inspiration of the wonderful young army you have sent us.'

"But I think," continued Mr. Wilson, "that one of the greatest things the war has done for us is not that our allies have discovered us, gratifying as that is, but that we have as a Nation found ourselves. Unto us a wonderful privilege has been given. We have proven worthy of that privilege. We have proven to ourselves and to the world that as a people we are worthy sons of great fathers; that we are faithful stewards of a priceless heritage, and the standard which we have now set for ourselves is so high that each of us, at home and abroad, will be too proud of that which America has done to ever let any act of ours tarnish the shining name which has been written forever in the history of all the world."

Further, I insert a statement I made concerning the same trip, and which appeared in the Fort Worth Star-Telegram, published in Fort Worth, Tex., in its issue of the 1st of this month, as follows:

CONGRESSMAN WILSON WRITES OF EXPERIENCES OF OFFICIAL VISIT TO WESTERN AND ITALIAN FRONTS.

Following his return to Washington from his trip to the war zone, Congressman JAMES C. WILSON, of this district, has written the following report:

"I went abroad as a member of the Naval Affairs Committee. Most of the trip was official and was primarily to investigate and study our naval activities—and there are many in Great Britain and France.

"The routes taken by our convoys and warships must be very confusing to the enemy. For instance, in our case I thought we would reach the North Pole before we ever landed. At least I commenced to think so when we got to where the sun did not set until 10 o'clock at night and was up again by 4 a. m.

"We visited the Grand Fleet; in other words, the British and American fleets combined. You can imagine they are in about the right place. The Germans keep pretty well posted, but they are no better posted than other folks; and I want to say if they ever get a look at what we saw I think they will continue to remain in hiding. Some look for a naval battle, but frankly I do not. My trip convinced me that as a naval power, compared to Great Britain, we are small; but when it comes to efficiency we are very much the mother country's superior.

"We were the guests of the British Government during the entire stay of two weeks in Scotland, England, and Ireland, and were escorted by and in charge of Capt. Guy Gaunt, of the British Navy, a most lovable Australian, who had been Great Britain's naval attaché at Washington just prior to our entrance into the war. They simply overwhelmed us with hospitality, opened wide to us the inmost parts of their own naval activities, and, of course, took us to all of our own naval stations. It is most interesting to know the inside and just how the British and Americans have stopped and are stopping the submarines. The greater share of the credit for this most effective work during the last 18 months goes to the Americans.

ROYALTY "PLAIN FOLK."

"We were given a banquet by the House of Commons at the House of Parliament, where were most all the leading men of England. We had a most interesting talk, quite at length, with the prime minister, Lloyd-George. I wish I could give here what the three prime ministers of the three countries we visited said, but this kind of a statement will not permit it. We dined with the Lords of the Admiralty and were at a reception given by King George, Queen Mary, and Princess Mary at Buckingham Palace. They were about the most democratic folk we met, and made us feel about the most at home. There was nothing stiff or formal about it, but everybody had a grand good time. In fact, we found the royal families to be just good, plain folk.

"Three shells from 'Big Bertha,' the 75-mile German gun, struck Paris the day we arrived. Apparently no one gave 'Big Bertha' a thought. All appeared unconcerned as to whether the big gun would fire on Paris or not. Of course, we met all the officials of France, including the President, Poincaré, and Premier Clemenceau.

"With the Naval Affairs Committee I visited the Chateau-Thierry front, including Belleau Wood and other now famous battle fields, because of the way the Americans stopped the Germans in their march to Paris. Pickett's men at Gettysburg had a much better chance for their lives than our boys did charging the Germans at Belleau Wood. The King of England and Premier Clemenceau told us that it was the conduct of our men in giving no ground and winning every battle in our first fighting that had brought up the morale of the French and British armies to the high pitch it now is. In fact, they all look upon the coming of the Americans as standing out in history all by itself—nothing to associate or compare with it. The morale of all the men in all the allied armies is just as fine as if we were at the very beginning.

"We visited the Verdun front, now the most famous battle field of the world's history; and the Lorraine sector, held by the Americans, and where the battle is now going on; and Gen. Pershing at his headquarters. I wish to say he is truly a big man and looks the part. Every American is very proud of him. He has seen much service in Texas and has the most intimate knowledge of the State.

VISIT ITALIAN FRONT.

"Our visit to Rome was, of course, most interesting. We saw the responsible Italian officials, including the premier, Orlando, a most able and remarkable gentleman.

"We went from Rome to the Italian front and saw there the wonderful engineering feats accomplished by the Italians in the Asiago and Grappa Mountains. Here we were in the very front-line trenches; looked over into Austria and on the Austrian trenches. An artillery battle was going on at the time.

"We were given a dinner by King Victor Emmanuel of Italy at his army headquarters at the foot of the Alps. We were the guests of the Italian Government all the time. The King was most democratic. He referred to the Queen not as the Queen, but as his wife, saying 'My wife did so-and-so.' We were at a review of the Italian Army the next morning, when the King was conferring decorations. Noticing where we were, he came down from the rostrum, bringing Gen. Diaz with him, through the crowd to where we were, merely to introduce the general. The Italian Army officers are men of large stature, men of the finest physique, and of the very highest type, and, strange to say, nearly all speak English.

"There is no spirit of profiteering in Italy. If you do anything for an Italian he wants to do twice as much for you in return. Our soldiers mix exceedingly well with the Italian and French, but, strange to say, not as well with their cousins, the British. I can not say too much in praise of the spirit of the Italian people and Army. They are doing and will continue to do to the very finish their limit.

"Our idea of the French is gotten largely from poetry, song, and history, and it therefore would not be surprising if we felt disillusioned in some respects by a visit and study of the people. I wish to say, however, that I came back with my previous notions about the French more than confirmed. They are a race of 'game chickens.' To say they have been bled white does not begin to give you an idea of their real suffering and sacrifice. They look upon the Americans as their saviors. The people and soldiers are alike appreciative.

BRITISH ALLIES' BACKBONE.

"But we are staggered when we get an insight into the burdens borne by the British during the war. They were the real backbone of the fight up to the time we got into it. The British say nothing, but hang on. They are truly the 'bulldogs' of this war. Whenever you strike a front held by the British you will

know it by the creases down the horses' backs and by the trucks, wagons, and harness, and guns shining. You would think you had run into a circus just starting in the beginning of the season.

"I traveled about 1,000 miles in auto in France. We have many naval air stations in France, and we visited them all.

"As to personal experiences, I had many and some narrow escapes. I went up in a dirigible balloon and out over the English Channel. This to anyone who had been up in an airplane was not so exciting. Next in a hydroplane that weighed 6 tons without cargo, I went 40 miles out into the North Sea. I flew over Paris in a French Spad at an altitude of 4,000 feet. I saw many pictures by Angelo and other great artists, but none so beautiful as Paris, seen from the air, lying on either side of the Seine.

"When the Naval Affairs Committee was through with its official trip, three of us, realizing that we had not seen the American boys actually in the front-line trenches and in battle, determined to remain in order to see them. In accomplishing this was where we had our most thrilling experiences. We really became accustomed to walking under a roof of German and allied shell. The morning we went to the front where our boys were fighting the armies of the Crown Prince was a foggy, misty morning and we were sure we would not be discovered, but in some way we were, and they shelled us, also the woods where our car had stopped. It is needless to say we did not get used to that. The shells as they come at you come with a terrific, horrifying scream. A piece of the shrapnel from one of them hit within a foot of me. It was not our purpose to experience this any more, but that night we had an air raid by the boche. They dropped two shells near us that literally jarred the earth. One really feels very helpless when he realizes the boche are over him and that they are liable to drop these bombs at any time, especially when you are in the open and can not tell whether they are going to hit you or the other fellow. It is really a relief when the bombs commence to hit the ground and explode. At the same time the boche were up, the shells from our guns were, of course, bursting constantly up in the clouds and the searchlights playing, all made it most spectacular. The boche plane talks with a brogue easily recognized after once heard.

SAW FRENCH ATTACK.

"Another night at this same place—which was the right flank of the French Army—between Soissons and Rheims, we witnessed one of the great drives made by the French. The artillery battle started about 10 at night and lasted until 5 in the morning. The flash of the guns was so constant that it made a wall of fire reaching to an angle of about 45° in the heavens, in front of us and to our right and left, for miles. About 4 a. m. some of our men went over the top, and the boche, thinking it was a general offensive, opened up along their entire lines as far as we could see. It was a most spectacular and thrilling sight.

"To see and study the handling of the supplies and all of the operations behind a great army like the allied army is really the event of a lifetime. Though the British sector was closed to all visitors, being members of the Naval Affairs Committee of the United States Congress, we were able to get in and went, by auto, to Calais, Dunkirk, and all over present Belgium, which took us about two hours. While in Ypres we were severely shelled by the Germans with both shrapnel and gas. We were in an automobile and, of course, moved out of Ypres, and I fully believe the speedometer went as high as 65 miles—at any rate, fast enough that it was much more dangerous in the car than in Ypres. In fact, the most dangerous machine I had anything to do with on the trip was the automobile—the way they are handled.

"The Italians are all speed crazy. It is nothing uncommon to see the speedometer reach 60 miles. In England, France, and Italy no individuals are permitted to run autos. The Italians and French go through towns at 40 and 50 miles an hour, and the people down the narrow streets, clearing out, would remind one of chickens getting away from a hawk. They know when they hear a car that it is on some mission in connection with the war. They have a law that if you get hit by an auto you also get arrested. This applies in peace times as well as war, and if there is any suing done it is by the party running the automobile. One soon learns to get out of the way. One day to avoid hitting a Frenchman who had his wife and little girl with him and whose horse was lunging across the roadway our driver ditched our car, turning it over. We happened to be going only about 40 miles an hour and no great damage was done other than breaking the leg of the naval officer who was sitting on the rear seat with me.

"We were right behind the British Army and within sound of their guns from Belgium down to where it connects with the French. In fact, three of us saw this front practically from Lorraine, overlooking Metz, to the sand dunes of Flanders overlooking Ostend and Nieuport.

AMERICAN'S BEST.

"I will not undertake to talk about our boys at the front, for I have not the time. I can say this, though, that you come back with the feeling that you do not care how much you are taxed nor how much you are denied; that you can never make a sacrifice worth mentioning compared to what our boys are making at the front. You also come back with the belief that they are the best soldiers on this earth; that they really are the best and they know it. They can whip the boche on any part of the ground, and our boys know that and the boche know it. You are made to love America more and Americans more and are prouder of your race.

"As to the ending of the war, that is liable to happen any time. Austria is undoubtedly near the end, and Germany is getting pale with weakness and fright. One is impressed that we are getting near the end. You do not know when it will come exactly, but you do know that it is not far off. When you are over there, it reminds you of the thaw of the ice in a big river. You can hear the grind and ominous noises, and you feel that there is a terrific strain that is going to cause a break and that it is going out before long, and you know it is the head-rise pressure of America that is going to force it through.

"As a fitting finish to our trip, we came back on the largest ship in the world. No one gave the submarines hardly a thought. In fact, everybody in the danger zone in this war pretty quickly become a fatalist anyway. The ship we were on was large enough that it ran two picture shows, and it was indeed a great sight to see crowds pouring out of those shows at night out in mid-ocean. This ship has a capacity of and has carried right up to 14,000 people. In other words, more than twice as many people as live in my old home town, Weatherford."

The American Mother and Her Soldier Boy.

EXTENSION OF REMARKS

OF

HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 18, 1918.

Mr. KEATING. Mr. Speaker, I have a friend who declares when he sees a soldier and his sweetheart together, "These are great days for girls," but I am always moved to add, "They are hard days for mothers."

Every mother's son is her hero. Before he was born she dreamed dreams and saw visions of his splendid future.

Before she had clipped the shining curls from his baby head she taught him to love his God, his country, and his country's flag, looking toward the day when he should play a man's part in camp or court.

The supreme sacrifice has been required. Her boy is engulfed in the great war. He is a mere atom in this stupendous international adventure.

She would have been ashamed if he had faltered when the "call" came, but she would willingly lay down her own life to protect him from harm.

The Spartan mother said to her son, "Return with your shield or upon it." The American mother sings, "Don't come back 'till it's over, 'over there'!"

Many men and women are posing as patriots in these days, but just two figures enchain my attention as heroic—the American mother and her son.

The American boy will win this war, because he is the son of a brave mother.

You have seen them, these courageous mothers, all over our land, giving their own flesh and blood for the salvation of humanity, and bidding their boys "God speed" with a smile. That is patriotism de luxe. That is the patriotism that fires the imagination of the poet.

During the Civil War Thomas Buchanan Read, in his "Wagoner of the Alleghenies," wrote:

The maid who binds her warrior's sash,
With smile that well her pain dissembles,
The while beneath her drooping lash
One starry tear-drop hangs and trembles;
Though Heaven alone records the tear,
And fame shall never know her story,
Her heart has shed a drop as dear
As e'er bedewed the field of glory.

The great war has inspired much verse that is destined to endure.

In a small volume entitled "Bill of the U. S. A." Kenneth Graham Duffield has phrased the heart throbs of the American fighting man and his father and mother. Allow me to quote:

BILL.

BILL OF THE U. S. A.

There wan't much excitement 'round our way,
 'Bout th' war.
 We tuk th' papers an' read 'em through,
 When we hadn' nuthin' better t' do.
 We didn' know which side wuz right,
 An' didn' much care who won th' fight.
 So th' ole war run along until
 Th' President said he needed Bill.

Seems like th' Dutch wuz a-killin' our folks
 Out on th' sea,
 A-sinkin' our ships an' a-sendin' 'em down,
 An' lettin' th' wimmin an' children drown.
 Th' President writ 'em a note er two,
 A-tellin' 'em what they'd better do,
 But they kep' right on until
 Th' President says, "It's up t' Bill."

So he sent out word t' count th' men ez wuz fitten t' fight,
 An' Bill he put right off fer town,
 An' found a feller 'at writ it down
 'Bout where he wuz born—what town an' State,
 An' Bill he give 'im his age an' date:
 "Born up yonder an' livin' there still.
 Scratch out 'Exempt,' I'll fight," sez Bill.

There wan't any fellers much straighter than Bill—
 Er better built.
 A hundred an' eighty an' dwe foot ten—
 Th' mold God uses when makin' men.
 Bill's hair wuz black an' his eyes were blue—
 That wuz his Irish showin' through.
 An' th' captain sez, ez captains will,
 "Send me a million men like Bill."

So Bill he's packed an' ready t' go.
 Way over there.
 A-shoulder in gun an' his soldier's kit—
 Able an' willin' t' do his "bit."
 Ready t' see th' ole war through,
 An' do th' fightin' there is t' do.
 They've fought together, an' allus will—
 God an' th' U. S. A.—an' Bill.

A LETTER FROM BILL'S DAD.

It's lonely, son, since you went away,
 Across th' sea,
 Th' birds don't sing ez they used t' do.
 When we went fishin'—just me an' you.
 It's hard t' bear—you're all I've got,
 An' when I gave you I gave a lot.
 But stick t' your job, an' be a man,
 If you can't lick 'em, your Daddy can.

It's goin' t' be tough fer me an' you fore th' war is done.
 You're goin' t' be hungry an' tired an' sore.
 Th' guns 'll be few an' oughta be more.
 But don't fergit I'm with you, son,
 A-sweatin' blood till th' war is done.
 I'm kinda old, but I'm still a man,
 If you can't lick 'em, your Daddy can.

I'm sorta crippled an' not ez young ez I used t' be.
 But a derned good fight is in me still,
 If you need th' "Old Man," jest holler, Bill.
 We'll send th' guns, an' all th' rest,
 You stay on th' job, an' do your best.
 Don't grumble er cuss—jest be a man.
 If you can't lick 'em, your Daddy can.

We've allus been pardners, since you wuz small,
 Jest me an' you.
 Seemed like a knife stuck in my heart
 When you joined th' Army, t' do your part;
 I'll work over here—you fight over there,
 An' father an' son are a pretty good pair.
 An' allus remember, you've got an "Old Man,"
 If you can't lick 'em, your Daddy can.

THE MOTHER OF BILL.

We found it wuz hard t' let Bill go off t' th' war.
 It's easy t' cheer th' other man's son—
 It comes kinda hard when there's only one.
 But Bill, he sez, "There's a job t' do;
 I'll shoulder a gun an' see it through."
 An' over in France, they foller 'im still,
 Th' love an' th' prayers uv th' Mother uv Bill.

Th' day it wuz cruel, an' th' night wuz worse,
 A-waitin' fer Bill.
 But th' Doctor an' me, we seen it through,
 Him tellin' me what there wuz t' do.
 An' after a while it come t' me—
 We used t' be two, but now wuz three;
 An' a little pink face, when all wuz still.
 Wuz snuggled up close t' th' Mother uv Bill.

Th' strongest thing in all Mother's life
 Wuz her love fer Bill.
 She'd plan an' plan what he'd be some day;
 "Ain't nothin' too big fer Bill," she'd say.
 I know 'at th' angel, in robes uv white,
 'At gathers th' prayers we say at night,
 Takes t' God, first, an' allus will,
 Th' whispered prayers uv the Mother uv Bill.

Waterways and Reconstruction.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,
 OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 17, 1918.

Mr. MOORE of Pennsylvania. Mr. Speaker, under leave granted by the House I submit for perusal of the Members copy of an address made by me before the Atlantic Deeper Waterways Association at the eleventh annual convention in Boston, September 24 last. This convention, held in the height of the influenza epidemic, was generously welcomed by the people of Massachusetts and was largely attended by delegates from all of the Atlantic coastal States. The proceedings continued for four days and included an inspection of the magnificent harbor at Boston, of the canals and locks of the Merrimack Valley, and of the Connecticut River. An increasing interest in the development and utilization of waterways to facilitate transportation in peace and war was manifested.

The address to which I refer follows:

ANNUAL WATERWAYS ADDRESS.

Ladies and gentlemen, the time has come for the president to present his annual report. He very much regrets that by reason of a three months' assignment to the task of aiding in the preparation of an \$8,000,000,000 revenue bill, which continued until the very moment the train left Washington for Boston, he has been prevented from preparing a formal address. It will therefore be necessary to speak extemporaneously and from memory as to what has been done.

Since our convention at Miami much progress has been made by the Atlantic Deeper Waterways Association. The first vice president, Mr. SMALL, of North Carolina, not necessarily because he is chairman of the Committee on Rivers and Harbors of the House of Representatives, but because of his deep and abiding faith in this work, and the other officers, including Mr. Schoff, the secretary, and Mr. Shuster, the assistant secretary, whose intelligent work has been highly appreciated, have all contributed very largely to keep the work abreast of the times.

THE RAILROAD-CONTROL BILL.

First and most important perhaps was the discussion of the so-called railroad-control bill, a bill that gave to the President the direction of the railroads of the country, and put him in possession of their property, which bill, being enacted into law, enabled the President to appoint a Director General of Railroads of the United States in the person of the Secretary of the Treasury, Mr. McAdoo.

Immediately after the passage of the railroad-control bill the president of this association, after consulting with Mr. SMALL and others, communicated with the President of the United States, directing his attention to the inland waterways movement and urging that it be given full and careful consideration in connection with the operation of railroads, and particularly in view of the necessities of the country. The Director General of Railroads was also communicated with immediately upon his appointment, and was asked to bear in mind the serviceability of the waterways of the country, the importance of dealing with them as a factor in the great transportation problem, and the necessity for giving them separate and direct consideration. I am happy to report that our message to the President and our request of the Director General of Railroads bore fruit, for the Director General of Railroads promptly indicated that it was his purpose to give full consideration to the problem of utilizing the waterways of the country. I have in my grip several letters which tell of the desire of the Director General to do his part. He did appoint an inland waterways committee and placed at its head the Chief of Engineers of the United States Army, Gen. Black, who probably will be with us before this convention closes. That committee was made up of men versed in waterways matters. I observe that one or two of them are in the room now, including the Hon. Calvin Tompkins, formerly dock commissioner of New York.

EFFECT OF SUBMARINE RAIDS, ETC.

But the Director General did more than appoint an inland waterways committee. He created a waterways division of the railroad administration and appointed a director thereof. The head of the waterways division, Hon. G. A. Tomlinson, I believe, will be with us before this convention is over. These are of the fruits of the efforts of the association with respect

to that great national movement which involved control of the railroads of the country.

When the submarine raid broke out upon the Atlantic coast the president of this association again drew the attention of Congress to the importance of opening up our inland waterways along the coast, and he is pleased to report that while for 12 years it had been difficult to attract the attention of Congress to this important subject, because of the diversified territory represented in that great national body, there was an attention upon this occasion and a solemnity of consideration that has seldom characterized the House. Representatives who previously had given but little thought to the matter of inland waterways and who had sometimes listened to the speeches in a critical spirit conceded that the time had come when badinage, or mere objection, should give way to a practical, common-sense method of putting our house in order.

COAL SHORTAGE RECALLED.

We observed also during the last winter, and immediately following our pleasant convention in Miami, another startling proof of the need of our waterways. The whole country learned what we knew it must eventually learn, that it had forgotten something in its great transportation scheme. The country found that the commandeering of the railroads and of the locomotives and of the cars tended to check rather than to facilitate the vast commerce that sought means of transportation. As the war demands increased our domestic transportation facilities were curtailed. But the great difficulty and the vital problem arose when the biting winds of winter found New England and all the Northern States without the ability to obtain their accustomed quantity of coal. This was brought to the attention of the Director General of Railroads and of the Inland Waterways Committee, and the world knows the difficulties that confronted them and of the efforts that were made to alleviate the conditions that had arisen. Probably no winter in our history produced so much hardship along the New England coast as occurred in these great industrial States during the winter of 1917-18. Dare we say it was partly because the advice and counsel and foresight of this great association had been ignored? What was the reason the factories ceased to run and the firesides were cold in the winter just over? Was there an ample supply of coal? That question was answered in the affirmative by the coal producers of the country. They said there was plenty of coal. Was the coal famine due to a scarcity of labor necessary to mine and produce the coal? The great operators answered that question in the negative. They said they could get the labor to mine the coal. What, then, was the reason for the scarcity of coal? Just this: The war required the use of every locomotive, of every car, in the country; and the war required that the ships should be manned, and that the ships should be furnished with supplies.

CARS JAMMED AT THE PORTS.

The ships were at the ports and cars were rushing toward the ports carrying coal to the ships. There were so many of them doing war work that they were blockaded on the way; they were piled up against the port of New York in particular so thick that when the severe snowstorms came there was no movement forward and there was no movement backward. There was plenty of coal and probably enough cars to relieve the distress in New England, but when the war demands absorbed the entire railroad equipment the industries of New England were obliged to yield. The waterways were not available because they had been ignored. They were incapable of service when the crisis came. They had been spurned even in the summer months, when common sense would have dictated their use. It is not for us to now say we had waved the danger signal. We had been predicting the day of frost, of storm, of epidemic, for a dozen years. We had pleaded for the two methods of transportation. "Do not wait until cold weather comes," we had said, "but fill your coal bins in the summer time, and if you have not the cars use your waterways." That appears to have been horse sense, even squirrel sense, which the national authorities were slow to recognize. But they are coming to see the situation now as we have seen it for years. The Director General of Railroads sees it. He has begun his great work.

TAKING OVER THE CANALS.

He has already directed the taking over of the New York State Barge Canal.

What does that mean? It means that while the weather is good we will have communication from the West, connecting up with the Hudson River and the great intercoastal waterway which this association advocates.

He has taken over the Delaware & Raritan Canal, which connects up New York Bay with the Delaware River and the South. And what does that mean? It means, not necessarily

that the Government has taken over the ownership of the property, which has long been railroad controlled; but that the Government has assumed the management and direction of that canal, and that barges will move through it under Government direction. That is a big gain between New York and Philadelphia—or rather the North and the South.

What else has been done? The Director General has appointed a divisional manager for the lower Mississippi River, and Government barges are being placed upon that stream to operate between St. Louis and New Orleans. Millions of dollars are now being spent upon the lower Mississippi in order to further river transportation and to relieve the congestion upon the railroads and to facilitate exportation through the southern ports. That is a big concession to waterways.

What else has been done? The Black Warrior River improvements have been taken over by the Government. Its canals have been placed at Government disposal, and Government barges are being constructed and operated upon that stream. What does that mean? That means that the great War, or coal fields may be worked all the year, and the coal from those mines may go into the Government's agencies in the South, in construction work and wherever it may be needed, and may find an export market. That spells progress in the South.

DANGERS ALONG THE COAST.

What else has been done? The Chesapeake & Delaware Canal has not yet been taken over, but the submarine raids along the Atlantic seaboard have attracted the attention of the Nation and have demonstrated the wisdom of the movement we advocate. We will not say in consequence of it, but largely because the public mind was fixed upon the Atlantic seaboard situation, the Director General of Railroads has taken over the Cape Cod Canal and it is being operated by the Government to-day. We are hoping the Chesapeake & Delaware Canal will be the next taken.

Mr. Martin was right when, in his address of welcome, he spoke of the big ship going back and forth safely through the Cape Cod Canal. He was right when he referred to the wisdom of the opening of that canal for purposes of peace as well as for purposes of war. He was right in raising the red flag of danger in regard to the Massachusetts coast. He was right when he gave notice to the people of Massachusetts as well as to the people of other States of this Union that there had been a lack of preparedness on this coast, despite the advice we have been giving through this association for the past 12 years.

LOSSES DUE TO SUBMARINES.

How many ships have gone down along the Atlantic seaboard since this submarine raid first startled our people I am unable to say. More than a dozen, more than two dozen, and they were American ships, manned by American crews. The loss in property has been heavy, the loss in life has been great. We will not say that there would have been no loss of property and no loss of life if our intracoastal waterway had been opened up and in service; but we will say that if our advice had been taken and the Taunton River route had been put in active operation, and that course which we traversed in automobiles to-day had been opened up as a waterway from the upper end of Fall River into Boston Harbor, business would have been going on as usual whether submarines were infesting our coast or not. [Applause.]

We have the record of Cape Cod. It is one of the most dangerous and forbidding of any along the entire 1,800 miles of the Atlantic seaboard. It is a fair match for Hatteras, the graveyard of the mariner in southern waters. In 25 years there were more than 1,000 marine disasters outside of Cape Cod. The dots on the map indicating the disasters hereabouts are like the markings of graves in a German cemetery after the American troops have passed by. [Applause.]

And there is just as much danger on the outside of Cape Cod to-day as there was when those thousand disasters occurred in those 25 years. Storms come and go as usual. The fogs abound; the rocks are there; the vessels that attempt the outside passage are held up just the same; commerce is halted and life is endangered. The Cape Cod Canal ameliorates that condition to a very great extent. But bear in mind that we could have saved much of that life and that property if we had come closer to Boston even than by way of the Cape Cod Canal.

THE NEW ENGLAND COAL BILL.

The original plans of this association contemplated the use of the Taunton River, and the distance from Fall River to Boston is but 46 miles as we traveled it to-day. That would be the length of the waterways that we suggested. But to go around Cape Cod into the storms, through the fogs, subject to the delays, would have meant a distance of hazard and risk three times as great. That is what we would have saved. I

agree with Mr. Martin that the business is here to justify the Cape Cod Canal, and the business is here to justify a safely protected inside canal all the way from the Taunton River to Boston. [Applause.] The eyes of the people will be opened to the necessity of this great project some day. We attempted to open them some years ago, when it was shown by the figures of the Boston Chamber of Commerce, as astute a body of business men as we have in the country, that the New England coal bill was \$100,000,000 a year, of which \$70,000,000 was paid in freight for \$30,000,000 of coal at the mines. We pointed out then, as Mr. Martin and Mr. Washburn will remember, that that was a handicap to New England which she would have to throw off some day if she expected to keep in the race with her competitors of the Middle West and of other sections of the country.

CHESAPEAKE AND DELAWARE LINK.

Yes; we have made some progress during the year. We have seen the actual taking over of canals to be operated by the Government; not necessarily to be controlled by the Government forever, but to be put into practical use and service by the Government for the purposes of war. We shall hope to see them improved and developed for purposes of peace.

The Chesapeake & Delaware Canal has not yet been taken over. Mr. SMALL and I have been following that situation very closely. Provision was made in the river and harbor bill of 1917 for the condemnation of that canal. The matter is now beyond the Inland Waterways Committee. It is beyond the War Department. It has been referred to the Attorney General of the United States, and we find it lodged finally in the office of the district attorney of Delaware, where proceedings are about to be commenced to condemn the property. We are hoping and praying that it will be done soon, for we want no further hindrances to the regular order because of the visitations of German submarines around the Delaware and Chesapeake Bays. [Applause.] We have forced this question to a point where it is up to the law officers of the Government. The execution of the law is up to the office of the Attorney General of the United States. It is his business to condemn and take over that canal, and I trust—but that is as far as I can go at this particular time. We expect the Attorney General to do his duty and to do it as the law directs.

The Chesapeake & Albemarle Canal has been taken over. It is owned and is being operated by the Government of the United States. That is the canal that connects the lower Chesapeake with the waters of North Carolina and Virginia. It is Government property. From that point south you are as familiar with the situation as I am—those of you who have been going to our conventions. Our course is straightaway; it is clearly marked all the way down to Jacksonville, and to a limited depth from that point all the way to Key West. That is the trunk line we advocate. So far as I am able to recall, these are the main steps of progress that have been made during the past year.

THE REDFIELD REPORT.

All but this, perhaps, and this is very important, as it is very encouraging. During the summer the Senate passed a resolution introduced by our friend Senator SAULSBURY, of Delaware. It requested the Secretary of Commerce to investigate and report fully upon the commercial and transportation value of the waterways of the country. The Secretary of Commerce has reported. His report has gone to the Senate within the last 10 days. It was a carefully prepared report, well fortified by facts and statistics. It has not yet been printed so that copies of it are available for public use, but I have seen extracts from it and am proud to say that this official report, which may be known hereafter as "the Redfield report," is a complete vindication of our whole waterways agitation, and, so far as it applies, a frank indorsement of the intracoastal project as we have advocated it in our pleadings to Congress. [Applause.] Secretary Redfield is on his way to address this convention and will, I am sure, confirm in person the businesslike presentation of the waterways question discussed in his report.

SIGNIFICANCE OF BOSTON MEETINGS.

Ladies and gentlemen, there is a peculiar significance in our coming to Boston for this our eleventh annual convention. We began this movement 12 years ago, crying "Boston to Beaufort!" We extended the line to make it from Boston to Key West. It has been the ambition of the association to come to this historic city, called "the Hub," a great industrial city, a great financial and commercial city, the great American and patriotic city of New England. We have long sought the opportunity of coming here, and we have not been disappointed in the reception we have received. [Applause.]

We want the sentiment of Massachusetts and New England crystallized about this waterways movement. We know the difficulties that have confronted the people of Massachusetts with regard to their inland waterways, their harbors, and their

ports. We know the vast appropriations they have made of their own accord for the improvement of their port facilities, for the development of their transportation, but we have wanted to know and to feel down in our hearts that Boston, with its great financial power, with its great economic and political strength, was with us heart and soul in the great movement to unite by water the Southern States with Boston and with Massachusetts. [Applause.]

Massachusetts has had an awakening. Her chief port, Boston, is a great export point. Every American is proud of the history and traditions of this city and this port. No man can come into this magnificent harbor without feeling in his breast a thrill of pride that he is descended from forefathers such as those who settled this great State. No man who has the American spirit can look upon the institutions of this great city without rejoicing that he is an American. He wants to leave Boston assured that the feeling which he entertains toward this city and its history, toward its men and women, is reciprocated all down the line, and as the result of our reception to-day we believe that we can depend upon that spirit of reciprocity. [Applause.]

THE BLOW THAT STIRRED OUR BLOOD.

The significance of our coming goes beyond the mere matter of sentiment. Here is a great financial city. Here is a property that the enemy would like to seize. Here is a point where the enemy would like to strike a fatal blow. A blow struck here would be felt to the corners of this great land of ours. And a blow has been struck. It was a glancing blow, but it stirred our blood. It was struck when those submarines hovering around Cape Cod sunk those barges off Provincetown; when they took possession of those trawlers upon the high seas; when they defied the sovereignty of the United States and the pride and spirit of Boston within sight of its temples. Those of us who have been saying, "Open up these waterways and we will beat the Germans"; those of us who have been saying, "Open up these waterways and we will protect New England"; those of us who have been saying, "Open up these waterways and we will guard the hinterland of the United States," understood what it meant when those shots were fired so close to the coastal line.

We rose as one man throughout this country to resent and resist it, but still we were obliged, so far as these inner passageways were concerned, to admit that we were not ready; that they could not be used by our wounded ships, or to seek repairs, or to pass from navy yard to navy yard. We were ashamed, as those in control of our Government should be, that such a condition should last so long to plague us, and to give aid and comfort to the enemy. [Applause.]

NEEDED AN OBJECT LESSON.

When this question of submarines arose there were those in Congress who said, "It needs an object lesson to stir the people." Yes; there were those who felt it would be necessary to kill a regiment, to destroy an American brigade, before we could make the American people understand that we were at war. There were those a little less fierce, a little more humane, perhaps, who held that the shelter of our inland waterways, in the event of an attack, would be equally serviceable and much more humanitarian than the destruction of a regiment or a brigade in battle upon the other side. But the lesson came, even as we were debating. It taught us something. It has taught Massachusetts something. It has taught the people along the coast and away back to the mountain tops that there was danger even in their fancied security. The lesson has been a profitable though a costly one. We should heed it.

Let us go forward then with our speeches and our resolutions. Let us continue to prove our case as we promised President Taft at Norfolk we would prove it. Let us make the Government understand that we are in earnest; that we represent the people; and that the people must be heard upon this great question of coastal protection and coastal transportation. We have been hindered in the distribution of coal, and people have gone cold because our waterways were closed. Whether the coming winter will duplicate the lesson of the past I do not know. Time alone will tell. Whether these waterways taken over by the Government will be put to such use that the problems of the past will not arise again to plague us I can not say, and neither can you; but we can agitate that the work we have started be completed, and we can urge it for the national welfare as we have done heretofore.

BEWARE OF THE GREEKS BEARING GIFTS.

There are those who would divert our thoughts from the main purpose, and because we are gradually approaching the end of our agitation, because of the cleverness of men in high station, I sometimes think there are those who would actually destroy the work that has thus far been accomplished. There are those

who would draw us away from the trunk line for selfish or mercenary purposes; who would undertake to distract our thoughts and take us away from the one big scheme we have made our goal. There are those who would have us build a canal other than the Chesapeake & Delaware, which has been approved by the United States Army engineers. There are those who, in the very teeth of the recommendation of the Government itself and of the indorsement of all men who understand the situation, would have us switch off to this creek or to that river and forget the main line. There are those who would take us away from the great project across the State of New Jersey, linking up New York and the Delaware River and the North and the South in one great coastal chain, by having us go directly across the State to a point near Barnegat. Sometimes I think we must watch those who are selfish in this matter and those who have local and sectional schemes, as we would watch the "Greeks bearing gifts." There is but one thing for us to do, and that is to adhere to the main trunk line, as we have done from the beginning, and let the lateral lines come in as the trunk line and its various links are completed along the way. Ours is the one grand scheme, one connecting chain all the way from New England to the end of the Florida line. There are 148 rivers navigable for more than 5,000 miles that empty into that trunk line. They will be available for public service when the chain is complete.

RECONSTRUCTION AFTER THE WAR.

During the last few months, when opportunity has been given to think upon this question apart from the revenue problems with which I have been engaged, I have thought that we should be prepared with something to offer our returning soldiers along this coast. The millions of men we have in France will return some day. The great obligations we are incurring here for their maintenance must some day be lifted, and a way must be found to give them profitable employment. They must again take up their citizenship here, and move hand in hand with us for the progress and perpetuity of our country. The Secretary of the Interior is working upon a plan for the taking over and distribution of arid and semiarid land. Our men are to be given those lands upon which to work when they return from the battle fields of France. But, my friends, I wonder if we have not something better than that to offer these returning soldiers, these hundreds of thousands of men who will be demanding employment and the right to live and prosper when they return to this country, these thousands of engineers who are building railroads and canals and waterways in France? I wonder if we have not something better to offer them than the arid and the semiarid lands? Why, along the Atlantic seaboard more than half of the entire area east of the Appalachian Chain, still fertile, irrigated by nature, awaits the hand of the tiller. When our men come back from France, these engineers, these brave young soldiers, seeking occupation, shall we put them at work upon the arid and semiarid lands? If they want to go, yes; but shall we not tender them this vast domain of ours and theirs along the Atlantic seaboard, where we can take care of millions of them on land awaiting them, on land bidding them to come, on land through which the water runs, on land which needs to be tilled only to fructify and blossom as the rose?

CANAL WORK A SERVICEABLE WORK.

I wonder if we would not have employment for those young engineers on a great canal to connect Boston with the Taunton River? I wonder if the ingenuity they are displaying now in spending our money in France on waterways, in the construction of barges, in the construction and development of railroads, would not enable them to bore through the rock that stands in the way of this watercourse from Boston to the Taunton River? I wonder if their genius, their skill, their labor, could be employed with more profit anywhere in the whole world than it could be in bringing this country of yours, that has long been regarded as rocky and barren, into fruitage, into commercial life, into increased industrial activity? No man can deny that if we were to put a substantial canal inland from Boston through the waters of Quincy, Brockton, and Taunton down to Fall River, your population would multiply, your industries would increase and diversify, enabling you to hold your own in the commercial race of the Nation. I wonder if there would not be business there for these young engineers and these young laborers, with their brawn and their muscle and their desire to serve, and the splendid training they are now receiving? I wonder if there would not be something for them to do when we take up that other connecting link that would send us from Narragansett Bay, down along by the inner waters of Rhode Island, inside of Fishers Island and Point Judith? I wonder if they could not help us connect up those bays and sounds?

A CHANCE FOR PROFITABLE EMPLOYMENT.

I wonder if their genius and their industry would not give them profitable employment in that direction? I wonder whether they would not like very much to deepen the harbor of New York? We could readily cut through Hell Gate. We could use a ship's depth there. We crossed it ourselves last night at a depth of less than 30 feet, sufficient for some of our vessels of war; and I wonder whether those young men could not be well employed in this kind of work below New York, getting busy on that line which is to link up New York Bay across the State of New Jersey with the upper Delaware River, so that if they could not find employment in New England they might find a welcome for their services in the great shipyards along the Delaware River? And I wonder, if we got that ship canal across the State of New Jersey, at, say, one-tenth the cost of the Panama Canal, rendering the Nation twenty times as much commercial service, possibly, I wonder if there would be a foot of land available along the little stretch of 33 miles from the end of the Raritan River to the upper end of the Delaware that would not be covered with factories and foundries and forges that must needs reach out for the materials of New England, for the ore from the Great Lakes and the West, from Canada by way of Lake Champlain and the Hudson River, and for the raw material coming up from the South?

THE AFTERMATH OF WAR.

Carry this scheme in your mind's eye all down the coast, my friends, and ask yourselves, as I have been asking myself, whether we could say anything to this Government that would be more helpful at this time, when confident we are going to win the war, than that we should prepare, as we seem not to have done in the matter of waterways heretofore, for that aftermath which must include such problems as the restoration of normal conditions and the employment and use of the energy and the labor of the men who are coming back from France.

This is one of the suggestions I wanted to throw out to you for your consideration, hoping you may carry it back to your Representatives. The great problem of reconstruction will occupy our thoughts even as much as have the problems of war. Italy is preparing for reconstruction now. She is building canals. France, in the very throes of war, her soil stained with the blood not only of the Germans who invaded it but of the Americans who are driving the Germans back—France is building canals and railways and preparing for the future. England is utilizing and building canals, preparing for peace. Germany is watching her opportunity and preparing for the future, enemy though she be. Apparently the only great nation on earth that has not been fully alive to the importance of the improvement of her canals up to this time has been the United States of America which we all love so well. And why has it been? Has it been due to the fact that we are an easy people? Has it been due to the fact that we are careless and indifferent about our own welfare? Has it been due to the fact that selfish interests have had control? Has it been due to the fact that we have deliberately bottled up our own opportunities? It can not be. We have simply overlooked them; and yet for 12 years this association has been agitating these improvements, and only now when the invader is at our door, only now when ships are going down on our coast, only now do we realize, or does the great mass of the people realize, that we have neglected something along the Atlantic seaboard that we should have attended to long ago.

URGING CONTINUED SERVICE.

My friends, if I had written this report it would not have been so lengthy. It might not have been quite so sentimental, but I have tried to convey to you the thought that we have made progress in this association during the year; that things have been accomplished during the year; that the public interest has been awakened during the year; that the coal famine and the raid on our coast have stirred an unusual interest in the matter of waterways in the United States; and that we should take advantage of that situation.

I trust the resolutions adopted at this convention may be so couched that the President and the Secretaries in his Cabinet, the officials of the Army and the Navy, and the people of the United States may be impressed, and that the effect upon them may have its effect in turn upon the Congress of the United States. [Applause.]

THE RESOLUTIONS ADOPTED.

Mr. Speaker, in addition to the foregoing I insert, for the information of Congress, the following resolutions adopted by the convention:

Resolutions adopted by the Atlantic Deeper Waterways Association at its eleventh annual convention, Boston, Mass., September 26, 1918.

The delegates and members of the Atlantic Deeper Waterways Association assembled in eleventh annual convention in the city of Boston, and representing every State on the Atlantic seaboard, do hereby submit the following declarations and resolves:

This association was organized for the purpose of promoting by every legitimate means the construction of an intracoastal waterway from New England to Florida. The association by annual meetings, by the dissemination of literature, and through the agency of the press has given wide publicity to its objects, and has set forth reasons constituting the merits of this national scheme for adding to the existing facilities of transportation. The association has challenged critics and skeptics from any section of the country to combat the merits of the necessity for the construction of this intracoastal waterway by the Federal Government. It is entirely fair to say that this challenge has never been accepted, and every intelligent citizen who has studied the proposition with an open mind has expressed an unqualified approval. We invite discussion and criticism. We plead for larger cooperation and activity by the States of the Atlantic seaboard for the creation of a public sentiment which shall impress the country, and through the country secure legislation from the Federal Congress. This is no sectional project. Just as the industries existing in the Atlantic seaboard States require raw material from other sections and must likewise distribute their products throughout the country, in like manner does this great project cover a part of our national transportation system. On many occasions have the Army engineers and patriotic citizens emphasized the strategic value of the intracoastal waterway as a most essential second line of defense. The present chief of the Bureau of Naval Operations of the United States Navy, Admiral W. S. Benson, in a notable address several years ago, described and illustrated the immense importance of this inside route for the more effectual protection of our country from hostile attack. Not in any invidious sense, but in deference to the truth, it may be stated that no intelligent civilian or naval officer has ever had the temerity to disparage this project. Recent submarine activities have awakened the public mind, and have elicited almost universal expressions of regret that this arm of defense was not now an accomplished fact.

May we submit that the time for action has come? The way of the pioneer is hard and the sponsors for any new idea or great constructive work require patience, persistence, and tenacity of purpose, and we intend to adhere to our program until our propaganda shall be translated into results, but we insist that the truth regarding the intracoastal waterway has been established and that Congress should now act.

Resolved, That the Chesapeake and Delaware Waterway is in process of being acquired and improved. Congress in the river and harbor act of 1917 authorized the Secretary of War to negotiate for the purchase of same, or in default of a satisfactory price, to institute condemnation proceedings. It is our information that condemnation of this canal is now being prosecuted by the Department of Justice. We respectfully urge that these preliminary proceedings be completed at the earliest date, and that Congress provide the necessary appropriation for the purchase of same, and its further improvement in accordance with the report of the Chief of Engineers at the earliest date practicable. The acquisition and improvement of this waterway constitute such an emergency as would well justify the President, if he has the power, to take over this waterway immediately as an exigency of war.

Resolved, That the importance of a waterway across the State of New Jersey is obvious. It would connect the great commerce on the Delaware River with Raritan and New York Bays and the metropolis. No argument is required to demonstrate its commercial or strategic value. The Chief of Engineers has made a report recommending a route with plans and estimate of cost. The State of New Jersey by legislative action has authorized the necessary appropriation for the purpose of acquiring all rights of way and donating same to the United States. It only remains for Congress to discharge its plain duty.

Resolved, That New England should unquestionably share in the benefits of a free intracoastal waterway. In a valuable pamphlet prepared by the Massachusetts Commission on Waterways and Public Lands, and submitted to this meeting, the initial sentence is as follows: "New England is the industrial center of the United States." As such industrial center it has an intimate interest with the other Atlantic seaboard States and with every State in the Union in the vital problem of distribution and transportation. New England requires additional facilities which may best be secured through water transportation. The great port of Boston, through the civic enterprise of the State and the city, has been provided with unrivaled terminal and

harbor facilities and can accommodate its present and increasing foreign trade. Its coastwise traffic with the ports and navigable rivers further south is handicapped by the dangers of Cape Cod. The immense supplies of coal, cotton, and other products for its industrial needs may be transported more cheaply and expeditiously under present conditions by water. This handicap has been in part removed through the construction of the Cape Cod Canal by private capital. This canal has not been provided with all the facilities for commerce, nor has it been used to the extent to which it was available, but it can be made a valuable line of communication. Congress, in the river and harbor act of 1917, authorized the Secretaries of War, of the Navy, and of Commerce to negotiate for the purchase of or the condemnation of this property and report their action to Congress. If the report when submitted shall be favorable, we recommend the acquisition and improvement of this waterway in the interest of the commerce of New England.

Resolved, That a waterway located further inland and fully protected from all dangers to navigation from Long Island Sound within the Rhode Island coast to Narragansett Bay, and thence up to Taunton River and thence to Boston, has long been and is still advocated as a safe and necessary line of communication between Boston and New England to the South. New England, as "the industrial center of the United States," can furnish traffic in sufficient volume to justify the construction of this additional waterway via the Taunton River. The Cape Cod Canal might be made available for the larger ships, both commercial and naval, and the Taunton River route for barges and smaller boats. We recommend this suggestion for consideration.

Resolved, That the waterway from Norfolk, Va., to Beaufort Inlet, N. C., should be completed. Congress several years ago adopted this project, and the section from Norfolk to Albemarle Sound is nearing completion, and the construction of the other sections should be hastened, to the end that this route which lies behind Hatteras may be fully available for use.

Resolved, That the link of the intracoastal waterway from Beaufort to the Cape Fear River deserves most favorable consideration by Congress. The construction of an inside route to the Cape Fear River will extend the same below Cape Fear and Frying Pan Shoals, on the Atlantic, so that boats may have access to the ocean at a point which would afford comparatively easy and safe navigation as far south as Florida.

Resolved, That a continuation of the intracoastal waterway from Cape Fear River to Winyah Bay, S. C., and thence by the natural inside route to the St. Johns River should have consideration at the appropriate time. We recommend that Congress authorize a reexamination of the intracoastal waterway from Beaufort south, to the end that consideration may be given to the desirability of a greater depth and better facilities than those recommended in the existing report of the Chief of Engineers.

Resolved, That the Merrimack River offers an opportunity for extending navigation facilities from the sea to an important industrial area in New England. If Massachusetts should cooperate with the Federal Government, as is contemplated, a mutual and feasible plan might well be effected for the consummation of this important improvement.

Resolved, There are other rivers in New England which penetrate the interior which may well be utilized for navigation, if practicable plans for their improvement could be effected, and among others we may direct attention to the Connecticut River, which, in addition to navigation facilities, possesses potential water-power possibilities of a most important nature. Legislation is pending in Congress intended to settle this vexed question of the development of water power by an adjustment of all differences between the States and Federal Government and the terms upon which this power may be developed. If this legislation shall be enacted as we hope, early efforts should follow for the improvement of the Connecticut River and the harnessing of its potential energy.

Resolved, That we renew our recommendations made at previous conventions in favor of the improvement of the Champlain Narrows as recommended by the Engineers, and of the fullest improvement of the upper Hudson River to meet the requirements of commerce, both existing and prospective, arising from the great investment of the State of New York in the reconstruction of its barge canal, and we further recommend the protection of this important approach to the Great Lakes from any obstruction to or interference with its navigable channel.

Resolved, That owing to the unusual commercial importance of the East River, the Harlem River, and the Bronx Kills we reaffirm our action favoring the further improvement thereon in accordance with the favorable report submitted by the Chief of Engineers.

Resolved, That we commend the action of the State of New York in making generous appropriations for acquiring a right of

way for a waterway along the south shore of Long Island and for the Coney Island Ship Canal connecting Gravesend and Sheepshead Bays and express the hope that a practicable plan may be agreed upon for joint action between the State and Federal Government for the early completion of this work.

Resolved, That we renew our recommendation in favor of an extension of the intracoastal waterway southward from the St. Johns River, Fla., by such plan as may be found practicable in adjustment of existing interests, corporate, State, and Federal.

Resolved, That in the development of water transportation in the United States, particularly upon our interior waterways, the necessity of some form of Federal supervision of water transportation has been made apparent. We recommend the creation of a bureau or other agency of the Federal Government to be either independent or under the jurisdiction of an appropriate department, clothed with authority to supervise water commerce. Such agency can be made a clearing house of information as to the appropriate type of boats, could recommend and submit plans for the construction of water terminals, could aid in the interchange of traffic between water lines and railroads, and in other ways promote and supervise water-borne traffic. Under the railroad act, which was a war-emergency measure, a Director General of Railroads was created. This act also authorized the President to take over and utilize canals and other interior waterways, with a view of increasing facilities of transportation during the war. We earnestly urge that such jurisdiction over waterways and water traffic be actively extended so far as may be necessary not only to meet the present emergency but to create a basis for a permanent increase in water transportation.

America's Marvelous Progress in Fifteen Months of War.

EXTENSION OF REMARKS

OF

HON. HENRY Z. OSBORNE,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. OSBORNE. Mr. Speaker, we have now entered upon the sixteenth month of war. All of that historic period, with an aggregate exception of two months, I have been a deeply interested observer of the unfolding of events at the National Capital, and as one of the 531 Members of the war Congress have participated in the legislation that has assumed such momentous proportions in arming our great country and mobilizing its strength for the irresistible world conflict between the power of the sword and unrestricted force as the means for ruling the world on the one side and that of individual freedom and liberty restrained only by self-made law for the conduct of the nations, on the other.

It has been a grand spectacle to view from the center of our country the gradual rousing to consciousness of our national life. Soothed to a condition of almost complete inertia by over a half century of peace and material prosperity, we had reached a stage of complacent and sensuous self-indulgence. We did not believe that in this advanced age of civilization and Christianity a war of the magnitude of those of the past was among even the remote possibilities. A few faithful sentinels in the national watch towers, and notably a former President of the United States and a Chief of Staff of the United States Army, sounded cries of warning, but as in Great Britain the solemn declarations of Lord Roberts were unheeded, so were those of Theodore Roosevelt and Gen. Leonard Wood in America. We could not bring ourselves to believe that war was possible to our peaceful country, where we had carried to the extreme limit the principle that to "resist not evil" was to avoid evil, because it would not provoke it. Even when, after the 1st of August, 1914, we were witnesses to the ruthless and bloody character of the war which Germany had forced upon Europe, there were few who believed that it was possible that our own country might become involved. The war was far away, with a wide ocean separating us from the field of conflict.

It was not long before American ships were sunk by German submarines with loss of American lives. Little satisfaction was obtained through diplomatic negotiations, and aggressions quickly followed each other. A large area of the open ocean was, without warrant of law, declared a forbidden zone for ships of America and other nationalities, with the insulting concession that on certain days American ships, restricted in number, painted in some grotesque manner to identify them, might pass through that part of the ocean by keeping within

certain defined narrow sea lanes. These aggressions culminated in the torpedoing of the *Lusitania* on May 7, 1915, and the drowning of 114 American men, women, and children, and, in addition, about a thousand of other nationalities.

This ghastly tragedy brought forcibly to our Government and people the absolutely soulless and reckless character of German warfare and their indifference as to the maintenance of peace with America, if not their desire for war with this country. While the German Government receded so far as to promise that no more passenger steamships should be torpedoed without warning, the promise was not long kept, and on January 30, 1917, notice was formally served by the German ambassador on our State Department that unrestricted submarine warfare would be resumed on February 1—thus giving a single day's notice.

This cynical renunciation of an agreement solemnly entered into but a few months before was the last piece of evidence to the American Government and people that Germany was intent upon forcing war upon the United States or of forcing upon us all the humiliation that attaches to a State that lacks the strength or courage to assert and defend its rights. In the meantime the American Government, through its Secret Service, had obtained possession of a large number of secret code dispatches between the Berlin Government and its ambassador at Washington, the notorious Count von Bernstorff, and other German diplomatic representatives in Mexico and Central America, disclosing intrigues of the most dastardly character intended to involve this country in war with Mexico and Japan, in the event that we should resent the resumption of unrestricted submarine warfare. After the sinking of the *Lusitania*, and before this last perfidious action of Germany, the Emperor William had taken occasion at a lengthy private interview with Mr. James W. Gerard, the American ambassador at Berlin, to warn and threaten the latter with reference to the insistence of the United States upon its rights as a neutral. "The United States had better look out after this war," declared the Emperor, shaking his finger in the face of the American ambassador, and adding, "I will stand no nonsense from the United States after this war."

All of these things combined undoubtedly convinced President Wilson that war was inevitable. We could not avoid it. By submitting to great humiliation and swallowing our own words, possibly we might postpone the struggle until Germany's war with the allies was finished. Then, however, Germany would force war upon us for the purpose of compelling the rich United States to pay all the expenses of the European war. That war we would have to fight alone and without the assistance of the allies. The President undoubtedly followed this course of reasoning, and wisely decided to bring the issue at once. By thus doing he reasserted the dignity of the United States, challenging the admiration of the world for the Great Republic, and entering the struggle at a time when we would have brave and powerful allies actuated like ourselves by a devotion to freedom and liberty.

It is true that we entered the war at a time when we were utterly unprepared. The United States has always been devoted to the arts of peace, and these require for their highest development an evenness of conditions that is incompatible with war. As we had had no serious war for over half a century, we assumed that there never again would be war. So our military equipment was of the most insignificant character, limited to 9,224 officers and 202,510 enlisted men. Our Navy numbered 83,000 officers and men.

Our country, as we subsequently discovered, was honeycombed with the spies of Germany, so that actually there was a better knowledge of our military helplessness in Berlin than there was at Washington.

We were not only without an army, except the skeleton organization mentioned, but we had no organized reserves for that.

We had no reserves of rifles; no small arms; no artillery, small or large; no ammunition; and no equipment.

We had no places of rendezvous for our Army that was to be raised, no cantonments, no tents, and no Government-owned lands on which to erect cantonments and establish camps and drill and parade grounds.

We had but few ships upon the seas, and still less airplanes in the air, and these were of obsolete types, of insignificant power and driving force, utterly useless in comparison with the combat planes of the German enemy and of the allied powers.

We had no money in the National Treasury with which to commence the production of a war equipment, and no laws on the statute books that would authorize the President to proceed with the necessary provisions for war.

We had all manner of sentimental weakness to overcome, which included not only a bold and active German propaganda, but an insidious disloyalty which took various forms, including

pacifism, conscientious objection and much objection that was not conscientious; constitutional mongering among men who never before knew that the United States had a Constitution; opponents of a big army, or of any army; objectors to a selective draft; proponents of the theory that we might possibly have an army to defend our own shores, but that no army should be sent to Europe; I. W. W.'s, advocates of "direct action" and sabotage, who not only advocated but practiced these theories of anarchy and destruction.

When the Sixty-fifth Congress was called into extraordinary session on the 2d of April, 1917, our country was at its lowest ebb as to both physical and moral strength as to all these things.

From that historic April evening, when President Wilson addressed the assembled Senate and House of Representatives in the presence of his Cabinet, the Justices of the Supreme Court of the United States, the diplomatic corps, and distinguished citizens, who crowded the galleries of the House, a change commenced.

Four days later, on April 6, 1917, between 2 and 3 o'clock in the morning the House of Representatives passed the joint resolution declaring the state of war with Germany.

On April 23, 1917, just three weeks after President Wilson's war address, Congress passed the first of the great bond measures, and there have now been voted by Congress more than twenty billions of dollars with which to finance the war.

The great German spy system in America has been broken up and disorganized by the espionage and other acts of Congress.

The men have rifles and small arms and ammunition in abundance for an army of 2,000,000 men, and we will have enough for 3,000,000 as soon as the men are rendezvoused. While artillery and large guns are slower of construction, they are now being manufactured rapidly and in quantity.

We have 32 very large cantonnments in the United States, some of them capable of comfortably housing 50,000 or more men, and scores of others of lesser capacity.

Where we had but few ships, and but sparse means of making ships, shipping is now being launched at our various national shipyards at the rate of 30,000 tons per day, and there is promise that soon it will be increased to 60,000 tons. We appropriately celebrated the recent Fourth of July by launching 100 ships on that day.

Where in the early months of the war pacifists, Germans, pro-Germans, "conscientious objectors," anarchists, and I. W. W.'s were loud and bold in their various traitorous propaganda, thanks to the laws passed by Congress, vigorously enforced by President Wilson's administration, supported by a patriotic people at home, now we hear but little from them, and if they have not changed their belief and learned loyalty, at least they have learned a safer discretion.

Our Army, which, on April 2, 1917, embracing the Regular Army, the National Guard, and the Reserve Corps, had 9,524 officers and 202,510 enlisted men—a total of 212,034—on June 28, 1918, as stated by the Secretary of War, had approximately 160,400 officers and 2,010,000 enlisted men—a total of 2,170,400.

The Secretary of the Navy, in an address on the Fourth of July, stated that when we entered the war there were but 70,000 men in the Navy and 13,000 in the Marine Corps—83,000 in all. There are now 465,000 officers and men in the naval service, the Secretary assured his hearers, and the number is growing at the rate of nearly 2,000 a day.

The total force of the Army and Navy when we entered the war was 295,034 officers and men. In less than 15 months it has increased to 2,655,400 officers and men.

On July 1 of this year more than a million of our brave soldiers were in France or on ships on the way over there.

In view of the scarcity of transport ships and the abundance of German submarines, this is a wonderful accomplishment.

Secretary of War Baker, in a statement to the President on that date, gave the following thrilling data:

MY DEAR MR. PRESIDENT: More than 1,000,000 American soldiers have sailed from the ports of this country to participate in the war in France. In reporting this fact to you, I feel that you will be interested in a few data showing the progress of our overseas military effort.

The first ship carrying military personnel sailed May 8, 1917, having on board base hospital No. 4 and members of the Reserve Nurses' Corps. Gen. Pershing and his staff sailed on May 30, 1917. The embarkation in the months of May, 1917, to and including June, 1918, are as follows:

	1917.
May	1,718
June	12,261
July	12,988
August	18,323
September	32,525
October	38,759
November	23,016
December	48,840

	1918.
January	46,776
February	48,027
March	83,811
April	117,212
May	244,345
June	276,372
Marines	14,644

Aggregating ----- 1,019,115

The total number of troops returned from abroad, lost at sea, and casualties is 8,165, and of these, by reason of the superbly efficient protection which the Navy has given our transport system, only 291 have been lost at sea.

The supplies and equipment in France for all troops sent are, by our latest report, adequate, and the output of our war industries in this country is showing marked improvement in practically all lines of necessary equipment and supply.

The production of airplanes has been a slower undertaking than was anticipated, but truthfully it can be said that the preliminary work is now accomplished, and that the present rate of production is satisfactory. The result will soon be noticeable on the battle fronts of Europe. There is general agreement that the American-invented Liberty motor, as to which there was for a time much question, is a complete success, and the equal if not the superior of any airplane motor in the world.

Secretary of War Baker, in a communication to the Committee on Military Affairs of the House on June 28, stated that, up to June 8, 286 combat planes had been delivered. These are planes of the highest type. The advance in production of these machines is shown by the average of production, which in April of this year was 5 only; in May, 38; and for the week ending June 8 was 80.

More than 2,000 Liberty motors had been delivered to the Army and Navy to that date. The average production of the Liberty motors in April was 96; in May, 143; and in the first week of June, 115.

The total deliveries of elementary-training planes to June 8 was 4,495, and of advanced-training planes, 820; combat planes, 286; total, 5,601.

Of machine guns for use in airplanes, 37,250 had been delivered up to June 8.

To the same time 1,300,000 rifles had been produced since the beginning of the war, and in two weeks preceding June 1 more than 66,000 were delivered. Sufficient rifles to equip an Army division are now being received every three days.

In France our engineers and soldiers have built a great port for the use of our Army, and to receive supplies, including vast dockage and terminal facilities, where in July a maximum of 750,000 tons of freight is being handled.

Complete double lines of railways had been purchased and constructed from this port in France to the battle front by the American engineers and Army to haul materials and men, equipped with American engines and rolling stock.

In the way of providing for our Army there have been forwarded by the Quartermaster General's Department from the beginning of the war to June 15:

27,249,000 pairs of shoes.
2,340,000 pairs of rubber hip boots.
4,010,000 pairs of Arctic overshoes.
43,922,000 undershirts.
103,028,000 yards of denim cloth.
104,333,000 pairs of wool stockings.
339,593 horses and mules.
1,700,000 halters.
129,000 escort wagons.
26,000 combat wagons.
10,870,000 files.
2,567,000 hammers.
5,121,729 axes.

While these figures are almost bewildering they afford a glimpse of the enormous character of the great war undertaking in which we are engaged.

WORK OF OUR NAVY.

While we hear but little about it now, the work of our Navy will stand out in history as among the most useful and valiant accomplishments of the war. Every one of the transports engaged in taking the more than a million men to the shores of France is escorted by a convoy from our Navy, and to the vigilance and skill of our naval officers and men handling these war craft and the swiftness and excellent character for the service of the vessels themselves, is due the comparative immunity which they have enjoyed from destruction by submarines.

While our great war vessels, our dreadnaughts and super-dreadnaughts, are constantly on guard for the large game, our torpedo boats and torpedo-boat destroyers are scudding back and forth over the submarine-infested zone, hunting these vermin of the sea, and woe to the submarine which exposes itself at the surface to these swift guardians of the waters. Fortu-

nately, the submarine is quite vulnerable, and if it is unable to submerge before the destroyer gets within range it is likely to be destroyed by gunfire. If it does succeed in submerging before the destroyer reaches the spot, the destroyer drops three or four powerful "depth bombs," and if one of them explodes within a hundred feet of the submersible it is likely to crush in its thin sides by the fearful force of the explosion. Quite often the rising to the surface of a quantity of oil and a slight show of wreckage marks the last episode of a German submarine. It is the shadow of this gloomy end that makes German sailors revolt against that despicable service.

GREAT HOUSING ACHIEVEMENT.

It would go far beyond the limits of a single address to recite all the great physical achievements of the Government in connection with the war. The great cantonments alone required millions for their construction. Sixty million dollars more were required for housing facilities to care for workmen engaged in munitions plants and shipyards; in Washington 25 acres in one of the public parks is covered with three-story office structures, while in another part 42 acres of such buildings are in course of construction.

Before this war the Panama Canal was considered one of the greatest and most expensive structures of all time, but even the Panama Canal, great and important as it is, fades into insignificance when contrasted with the vastness of the structures and expenditures of this great war.

MOBILIZATION OF INDUSTRIES.

While all these direct military activities have been in progress, the indirect mobilization of industry has been no less wonderful. The creation of the Food Administration and the Fuel Administration, with the vast powers attached thereto, has affected in some degree every man, woman, and child in America. In times of peace these vast powers would never have been conferred by Congress upon any person or agency. The power of fixing prices and of controlling products independently of the real owners of the property involved in peace time would be repugnant to all Americans, but in this great war, where the results are of such enormous importance to every individual, the rights and privileges of peace have been curtailed with scarcely a murmur. It is true that some complaints have been made as to the arbitrary workings of both the Food and the Fuel Administrations, and doubtless both have made some mistakes. But upon the whole there has been a patriotic acquiescence in the often drastic and far-reaching decisions of the heads of these great departments, especially in those of Mr. Herbert Hoover, the great Food Administrator, that is simply marvelous.

The President was authorized to take over the railways of the country and exercise that great authority for the purpose of being able to control shipments, with a view to making it impossible, through lack of such control, to cause delay in the shipments of the things that are absolutely necessary for the conduct of the war. Our brave men could not reach the fields of Europe without ships; the ships could not convey them without coal; the coal could not be landed at the ports of embarkation without the control of transportation. The same reasoning applies to other essentials.

By a recent law enacted by Congress the telegraph and telephone lines are placed in the control of the President—an enormous power, capable of a great restraint upon spies and the enemies of our country.

Congress in enacting this law attests its faith in the essential integrity of the President, and that he will not permit this vast power to be used for any other purpose than that for which it was intended.

All these unusual and enormous powers have been safeguarded by Congress by a provision that at the end of the war, or within a very short time thereafter, they shall be returned to the Congress and to the people who granted them.

THE SPIRIT OF SACRIFICE.

While all the great physical and industrial achievements have been accomplished, a still more important work in the line of patriotism has been done by arousing the soul of the American people, so that they are willingly submitting to great sacrifices of personal comfort and of proper personal advantage that in ordinary times is legitimate and commendable. The earnings of the people have been and are being devoted to the cause of the country, first, by enormous subscriptions to the various liberty loans, and, again, by outright contributions to the American Red Cross and other great beneficent movements. There is no right-minded American but has it strongly on his conscience to do what he may for the success of his country. The greatest sacrifice is made by those millions of young men who have entered our Army. They offer the greatest sacrifice that human beings can place upon the altar of their

country—that of their very lives. No other offering is comparable to that. But there are millions of others who are prevented by physical and other causes from participating in that great sacrifice, and who endeavor in some other way to compensate as far as possible for that deprivation.

It is one of the notable facts in connection with the correspondence of all men in public life that each day appeals come from men and women that if possible they be permitted to participate in some way in the great war, and the fact that suitable employment can not be found for them all is one of the disappointing experiences of public life.

LET ALL JOIN IN PATRIOTIC ENDEAVOR.

In conclusion, let me say that I have given but a faint outline of the vast change that has taken place in our national life since the 2d of April, 1917. Then we were as a Nation at the height of a marvelous industrial expansion. The country was vastly rich in material things; the people were carried away with the enjoyment of the sordid and material things of prosperous life. We had no national cares, and I regret to add little national patriotism. We had a vast population of hyphenated Americans, many of whom were more devoted to the name preceding the hyphen than to the American suffix. Fifteen months have changed America to a serious-minded, sacrificing, thoughtful, and patriotic people.

The most admired and popular men of our various communities are not the very rich men; they are the brave soldiers who have entered our vast armies, and whose breasts are bared in defense of the freedom of America and of the world.

PART OF THE WOMEN IN THE WAR.

Who can contemplate the nobly patriotic attitude of our American women in the war without emotion? Nature has denied them the physical strength and characteristics to qualify them to participate as soldiers in the great struggle. But always excepting the brave soldiers in arms themselves, it may be doubted if any other part of our patriotic population is sacrificing so much or performing more valuable service than the brave women of our country. It is they who have brought into being the millions of our gallant soldiers and sailors, and it is their hearts that are most keenly wrung by the sad partings and by the constant anxieties with which they follow the brave boys in the performance of their perilous duties, with the sometime tragedies that are inseparable from the soldier's career. It is their sad eyes that follow most intently day by day the casualty lists that come back from France. But bravely they do and endure it all, and meantime by hundreds of thousands perform all manner of beneficent work that may tend to increase the comfort and ameliorate the condition of our brave soldiers in the field and strengthen the cause of our country and of freedom and liberty throughout the world. All honor to our devoted and courageous American women, who constitute the chief inspiration that results in the highest American achievement in both peace and war.

We are no longer partisans, in the sense of regarding party measures and creeds as of the highest importance where war measures are concerned—and now nearly everything affecting our lives is associated with war. We are all Americans, first and all the time, and beyond every other consideration. When the war is over we will doubtless return to our old party affiliations, but so long as we are at war, let us devote every thought and energy to its successful termination.

What we have most to fear is the possibility of the war ending before it is actually decided. Our enemy would by his various peace suggestions produce a temporary peace by leaving the main questions unsettled. This could only result in future wars, which Heaven forbid! Let it be our unswerving object to wage this war to a successful conclusion, in order that there may be no wars in the future. One indispensable condition of peace must be the absolute elimination of the families of the Hohenzollerns and the Hapsburgs from the Governments of Germany and Austria, or from the government of any other country in the world. They are the monumental criminals and murderers of all time, and they must never be permitted in future to have any voice or influence upon the world's affairs.

Let us fight for our country, for our children, and our children's children, that they may live in a world of freedom, liberty, and peace. And to this end let us stand unitedly together, loyally sustaining the war measures that may be adopted by those whom we have carefully chosen to outline our national war policies, and bearing up the hands of our President, whose noble utterances as to the causes of the war, and the objects of the nations devoted to freedom and liberty, are accepted as authoritative throughout the world.

EXTENSION OF REMARKS

OF

HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 2, 1918.

Mr. LANGLEY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I submit some observations on the subject of the much-discussed and more or less famous McLemore resolution and the so-called Cooper amendment to the armed-neutrality resolution.

Barnum, the great circus man, once said that the American people liked to be humbugged. There never was a better illustration of the truth of this assertion than the McLemore resolution. As a faker Barnum was a pliker compared with the parliamentary sharps who staged the consideration of the McLemore resolution. As an artistic piece of camouflage the stage setting for the McLemore resolution was a masterpiece.

The McLemore resolution was introduced on the 22d day of February, 1916, more than a year prior to the entry of the United States into the war with Germany. The pertinent portion of the McLemore resolution is as follows:

Resolved, That the House of Representatives of the Sixty-fourth Congress of the United States do, and it hereby solemnly does, request the President to warn all American citizens within the borders of the United States or its possessions, or elsewhere, to refrain from traveling on any and all ships of any and all of the powers now or in future at war which ship or ships shall mount guns, whether such ship be frankly avowed a part of the naval forces of the power whose flag it flies or shall be called a merchant ship, or otherwise, and whether such gun or guns or other armament be called "offensive" or "defensive"; and in case American citizens do travel on such armed belligerent ships that they do so at their own risk.

The House was in favor of that portion of the resolution which requests the President to warn American citizens of the dangers involved both to themselves and to the peace of the country in traveling upon armed ships. The House was not in favor of that portion of the resolution which is as follows:

And in case American citizens do travel upon armed belligerent ships that they do so at their own risk.

Therefore it is at once apparent, in view of this situation, that in order to secure a fair expression of the views of the House touching the resolution its consideration must have been had under such circumstances as would permit of amendment. However, there was apparently no demand in the House for the consideration of the resolution. The House seemed to be willing that the whole matter of our relations with Germany should be left with the President, without interference or suggestion on the part of the legislative branch of the Government.

The House was not permitted to have its way in this matter, for, shortly after the introduction of the resolution, the President of the United States directed a letter to Mr. POW, the then chairman of the Committee on Rules, in which he said:

I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about in order that there may be afforded an immediate full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

On the 4th day of March, 1916, the Committee on Foreign Relations, to which the McLemore resolution was referred—reported the same adversely, accompanied by a report (No. 293), which said resolution and report were laid on the table.

This action on the part of the Committee on Foreign Relations killed the resolution as effectively as it could be disposed of. The Committee on Rules, however, complying with the request of the President that a vote be had on the resolution, reported, on the 7th day of March, 1916, a rule for the consideration of the resolution, which read as follows:

Resolved, That immediately upon the adoption of this resolution the House shall proceed to consideration of H. Res. 157; that there shall be four hours of general debate, one-half to be controlled by the gentleman from Virginia [Mr. FLOOD] and one-half by the gentleman from Wisconsin [Mr. COOPER]; that at the conclusion of said general debate the said resolution shall be considered under the general rules of the House.

The purpose of this rule was manifestly to camouflage the real sentiment of the House and to permit a vote to be taken upon the question of laying the resolution on the table instead of upon the resolution itself, which motion would have the effect of preventing also any opportunity to amend the McLemore resolution so that it would express the real sentiment of the House.

Under this rule it was in order for any Member of the House immediately upon the conclusion of the general debate for which it provided to move to lay the resolution on the table, and it was

the understanding that this motion would be made. This procedure was in fact followed, and as a result of it no vote was ever had directly upon the McLemore resolution, nor was there ever any direct expression on the part of the House as to any provision of the resolution.

The motion to table was adopted by a vote of 276 to 142.

Those who voted against laying the McLemore resolution on the table, and I was one of them, have been variously alleged to have voted in opposition to the administration if they were Democrats and to have voted in favor of the Kaiser and against the United States if they were Republicans. Some of those who voted against tabling the resolution have been condemned by the administration and others who voted against tabling the McLemore resolution have received the unqualified and hearty support of the administration.

The roll call of those who voted against tabling the resolution includes 35 Democrats, among whom were Fitzgerald, of New York, the then chairman of the great Committee on Appropriations, and FOSTER, of Illinois, chairman of the Committee on Mines and Mining. This list also includes the name of Mr. Kent, of California, who has since been appointed by the President a member of the Tariff Commission. If those who voted against tabling the resolution failed to meet the "acid test" of loyalty and thereby voted in favor of the Kaiser and against the United States, it follows by the same logic that when the President appointed Mr. Kent to the Tariff Commission he appointed a person who by his own test was not loyal to the Government.

This list also includes the name of Mr. VAN DYKE, of Minnesota, who has several times represented the administration as the spokesman of the Department of Labor in the adjustment of labor difficulties in the Northwest. Is it possible that the Department of Labor selected a man to represent it in the settlement of labor disputes who was in favor of the Kaiser and against the United States, and who failed to stand the "acid test" of loyalty?

This list also includes the name of Mr. KEATING, of Colorado, whom the President supported and for whom he wrote a letter of indorsement in the campaign of 1916, and whom the administration supported in the primary contest in Colorado in September.

If the purpose of the consideration of the resolution was to secure a test of the real sentiment of the House touching the warning of American citizens against unnecessary travel upon armed belligerent ships it failed utterly of that purpose, because the most cursory examination of the RECORD discloses the fact that no real vote was ever had upon the merits of the question; and it is worth mentioning in this connection that this resolution was never so much as read on the floor of the House and does not appear in the entire record of the proceedings at the time of its alleged consideration.

Why was the House in favor of the adoption of that portion of the resolution which provided for warning American citizens against the dangers involved to themselves and to the country in unnecessary travel upon armed belligerent ships? In the first place, the House was influenced by the attitude of the Department of State upon this very question.

It will be remembered that the Department of State had, not only once, but upon several occasions, issued warnings to American citizens against traveling in Mexico by reason of the danger to themselves as well as the likelihood of involving the United States in war with Mexico thereby.

On the 4th of October, 1915, the State Department issued a general notice containing the following declarations:

American citizens are advised to avoid visiting unnecessarily countries which are at war. The department does not deem it appropriate or advisable to issue passports to persons who contemplate visiting belligerent countries merely for pleasure, recreation, touring, or sight-seeing.

On the 18th of January, 1916, the Department of State directed a communication to the interested Governments, in which it stated:

In proposing this formula as a basis of conditional declaration by the belligerent Governments, I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights, which may be denied on account of new conditions.

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

The attitude of our Government, therefore, on the 18th of January, 1916, was to the effect that the right to travel upon an armed belligerent ship was at best a doubtful legal right, conditioned upon circumstances, and further was inclined to the opin-

tion that an armed merchant vessel should be considered as an auxiliary cruiser, and, of course, if so considered, subject to attack without warning and without securing the safety of the passengers. Whether our Government was right or wrong in this contention, it is apparent that the whole matter was in a state of so much doubt and uncertainty that action by the House directly defeating the McLemore resolution would in effect have been an invitation to the American people to jeopardize their own lives and the peace of their country in traveling upon armed ships of belligerent nationality, relying upon a doubtful legal right and in the face of a declaration of our Government that in traveling upon an armed belligerent ship they might be traveling upon an auxiliary cruiser subject to attack by the enemy as such.

It was equally apparent that if the House had taken such action in response to the request of the President that no other course would have been open to us except to declare war in the event of an attack upon an armed ship of belligerent nationality carrying American citizens. To put the matter more distinctly, having in effect declared the right to travel upon an armed ship of belligerent nationality to be an absolute and unqualified right, we would have had no recourse except to support that right by war had circumstances or conditions arisen which challenged it.

The right to travel upon an armed belligerent ship, however, is not an absolute or an unconditional right. It is a right which must be exercised subject to the respective rights of the belligerent countries. The commander of such an armed ship might attack a submarine or other enemy ship; he might resist capture or attempt escape. In any of these cases the immunity of the neutral passenger is lost. Again, the armed ship might be in the admiralty service of the nation whose flag it flies, or its commander might have instructions to attack enemy ships. Other conditions might exist giving the armed ship the character of a ship of war. In any of these cases the armed ship may be legally sunk without warning. The neutral passengers in every instance assume the risk that the captain of the ship will so act as to deprive them of the immunity to which they would otherwise be entitled or that other conditions over which neither they nor their Government has control might exist which would deprive them of this immunity.

In view of these facts the House could scarcely have taken the attitude, in a direct vote upon warning American citizens, that the people were not entitled to know that risks were involved in traveling upon armed belligerent ships and thereby warned against taking them.

Every attack upon a merchant vessel of a belligerent upon which there are neutral passengers may be made either legally or illegally. The questions involved in the legality or illegality of the attack must in all cases be settled by diplomacy or by war. The only question which the House would have been called upon to consider in a direct vote upon the McLemore resolution was the question of whether or not it was desirable to reduce the danger of war by adopting the simple method of warning American citizens of the risks involved in traveling upon armed ships. A vote favorable to such a warning would have in no way abridged or jeopardized the right of any American citizen, because in the event of an illegal attack upon an armed belligerent ship carrying American passengers or other neutral passengers it would still have been proper for us to assert the right and to establish it either by diplomacy or by force.

In support of the foregoing comments and contentions I reproduce the following comments of Mr. MANN, of Illinois, when the resolution was under consideration, and the evidences of the manner in which the House received them emphasizes what I have said:

[From p. 3635, CONGRESSIONAL RECORD, Mar. 6, 1916.]

Mr. MANN. I have not been in favor of bringing the matter before the House at all. I have been quite content to let the House attend to its constitutional duties [applause] and to let the President attend to his constitutional duties [applause], thinking that if at any time the President desired the action of the House he would come before the House or Congress and say so. [Applause.] There has been no complaint to speak of—at least voiced on the floor of the House—in criticism of what the President has done; certainly not from the Republican side of the House, and I think not from the Democratic side of the House. But gentlemen now insist that we shall record our views—upon what? Upon a grave question of international complications, or upon a resolution which somebody dropped in the basket, and which resolution no one in the House had ever heard of or read until the matter was urged to be adversely acted upon. Nobody was asking that the resolution be passed. Some people suppose that when a bill or resolution is introduced into the House it is a matter of great moment. Anybody who is a Member of the House, and nearly anybody who is not, can secure the dropping into the basket of a formal matter, a bill or resolution, relating to anything under or above the sun, and the House does not treat these things too seriously. I dare say there are few Members of the House who would say that the McLemore resolution, so called, expressed his sentiments or his position; and I under-

take to say that a majority of the Members of the House, if they expressed their opinions, are of the opinion that American citizens at this time ought not to complicate the situation by traveling in armed merchant vessels.

I think that when the question arises we ought to meet it [applause]; but I hope that our citizens may be so advised that we shall never be put to the test whether we have to fight because some fool had entered upon a joy ride or voyage. [Applause.] If we leave the matter as it is we have expressed no opinion. We have left the situation to the wisdom and the discretion of the President. But if we are forced to vote simply and solely upon the proposition to table the McLemore resolution, which is the proposition which the Committee on Rules will submit to the House, and we vote to table the resolution, we have voted that we invite American citizens to travel on armed merchant vessels, with the assurance that we will go to war if they do. [Applause.]

I am in favor of keeping out of war if it is possible. [Applause.] Who is it that proposes that we have a square vote? Not the gentleman from Massachusetts. He thinks that we ought to have a square vote on the McLemore resolution, but that we ought not to have a square vote on what we think ought to be done. [Applause.]

Now, gentlemen may say in denunciation of those with whom they do not agree that certain propositions are "fake" propositions. My idea of a "fake" proposition usually is one that I do not agree with. [Laughter.] Is the gentleman from Massachusetts, or anyone else in the House who is going to vote with him, willing that the House shall have a chance to amend the McLemore resolution? [Applause.] Putting up a man of straw and knocking him down is a favorite device, but it gets no one anywhere. If the President of the United States, for whom I have respect, desires to know what the Members of the House think upon a proposition, he certainly must desire to know what they honestly think upon it. [Applause.] If we take no action at all in the House, to that extent we do not endeavor to bind the hands of the President or to influence his conduct; to that extent it is a vote of confidence. But if we insist, or the Committee on Rules of the House insists, that we shall vote upon a question of grave international importance, I do not propose to register the will of anybody else, but to register my own judgment. [Prolonged applause.]

[From p. 3645, CONGRESSIONAL RECORD, Mar. 6, 1916.]

Mr. MANN. Mr. Chairman, if this were not serious it would seem to me like an opera bouffe. On Saturday the Committee on Foreign Affairs reported the McLemore resolution with the recommendation that it lie on the table. That is the usual form of an adverse report upon a bill, and, under the rules of the House, thereupon it was laid on the table. Nobody who favored the resolution asked to have it placed on the calendar, as was in order under the rules within three days; but, unfortunately, my colleague from Illinois [Mr. Foss], who, I understand, is opposed to the resolution, this morning asked to have it placed on the calendar. Being on the calendar, there is no way under the rules of the House, under our procedure, by which it can be reached for consideration. On Saturday it was on the table. This morning it was lifted from the table under the rules and placed on the calendar, hanging in the air, where nobody can reach it. To-morrow the Committee on Rules proposes to bring in a rule under which any gentleman will have priority and right of recognition to move to lay it back on the table, where it was Saturday and this morning. For Heaven's sake, how does that method of procedure settle any grave international complication. [Applause.] It is a silly procedure. Those who favored laying the resolution on the table are going to vote that way to-morrow. Why do they not leave it on the table to-day? They say they want a vote of the House. It will be no more tightly attached to the table if the House tables it than it was when the committee tabled it under the rule; but if gentlemen are on the square, if they really want to know the opinion of the House, then there ought to be an opportunity to amend the resolution so as to express the opinion of the House.

THE COOPER AMENDMENT TO THE ARMED-NEUTRALITY RESOLUTION.

On the 26th of February, 1917, the President in person delivered a message to the two Houses of Congress in joint session, in which he said:

On the 3d of February I officially informed you of the sudden and unexpected action of the Imperial German Government in declaring its intention to disregard the promises it had made to this Government in April last and undertake immediate submarine operations against all commerce, whether of belligerents or of neutrals, that should seek to approach Great Britain and Ireland, the Atlantic coasts of Europe, or the harbors of the eastern Mediterranean, and to conduct those operations without regard to the established restrictions of international practice, without regard to any consideration of humanity even which might interfere with their object. That policy was forthwith put into practice. It has now been in active execution for nearly four weeks.

In order that he might meet this unexampled declaration of the German Government the President asked that Congress authorize him—

to supply our merchant ships with defensive arms should that become necessary, and with the means of using them, and to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and peaceful pursuits on the seas.

Complying with this request, the Committee on Foreign Affairs on the 28th of February, 1917, reported House bill 21052, which, as reported, reads as follows:

Be it enacted, etc., That the President of the United States be, and he is hereby, authorized and empowered to supply merchant ships, the property of citizens of the United States and bearing American registry, with defensive arms, and also with the necessary ammunition and means of making use of them in defense against unlawful attack; and that he be, and is hereby, authorized and empowered to protect such ships and the citizens of the United States against unlawful attacks while in their lawful and peaceful pursuits on the high seas.

To the bill as reported Mr. COOPER of Wisconsin offered the following amendment as a proviso at the end thereof:

Provided, That no ship of American registry, while armed in the manner aforesaid, shall carry a cargo consisting in whole or in part of arms or ammunition consigned to a belligerent country or to any citizen thereof.

It was Mr. COOPER's contention and the contention of the minority of the Committee on Foreign Affairs that the arming of a ship carrying arms or ammunition would be a violation of international law, and the use of arms furnished by the Government in the defense of such a ship and cargo constituted an act of war. This question was admitted by Mr. FLOOD, the chairman of the Committee on Foreign Affairs, as is shown by the following statement made by him as it appears on page 4689 of the CONGRESSIONAL RECORD:

Mr. FLOOD. I do not believe that the President intends to convoy merchant vessels that carry munitions of war or to supply guns and ammunition to such vessels. Good international lawyers contend that to convoy a vessel loaded with arms and ammunition is an unlawful act; that it is an act of war. That to arm a merchant vessel and load it with munitions of war is an unlawful act. If that is so they would not convoy them or arm them under this law.

In the message asking for the authority to arm merchant ships the President said:

I am not now proposing or contemplating war or any steps that need lead to it. I merely request that you will accord me by your own vote and definite bestowal the means and authority to safeguard in practice the right of a great people who are at peace and who are desirous of exercising none but the rights of peace to follow the pursuits of peace in quietness and good will—rights recognized time out of mind by all the civilized nations of the world. No course of my choosing or of theirs will lead to war.

It is apparent from the statements of the President and Mr. FLOOD that the authority requested was desired for the purpose of protecting American citizens and American ships in the pursuit of lawful errands upon the high seas and against unlawful attack. It is equally apparent that this authority did not contemplate the commission of acts constituting acts of war. The resolution as reported, however, was broad enough to permit the arming of ships carrying arms and ammunition, which, as admitted by Mr. FLOOD, would constitute an unlawful act, and, if used, an act which would be an act of war.

Obviously, if it was not intended that the commission of an act of war should be authorized, it was the duty of Congress to so limit the terms of the resolution as to negative the authority to arm ships carrying arms and ammunition or to commit an act of war by using such arms in defense of such vessels. Such a limitation would in no way prevent the President from arming any vessel which it was lawful for him under international law to arm.

The rule under which the armed-neutrality resolution was considered was adopted by a unanimous vote of the House. The Cooper amendment was rejected by a vote of 125 to 293. Forty-nine Democrats voted for the Cooper amendment. Among this number were Mr. Gray, of Indiana, and Mr. KEATING, of Colorado, both of whom were supported by the administration in the 1916 campaign and again in the primary campaigns of 1918. The list includes Mr. Kent, of California, who was appointed by the President to a place on the United States Tariff Commission, and Mr. VAN DYKE, of Minnesota, who has represented the administration in the settlement of numerous labor disputes.

The resolution itself was adopted by a vote of 403 to 13.

A Visit to the Trenches.

SPEECH

OF

HON. GEORGE M. YOUNG,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 21, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12714) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919.

Mr. YOUNG of North Dakota. Mr. Chairman, I am in favor of the passage of this bill in its present form, and I hope it will be possible this afternoon, when we get to the five-minute rule, to take it up expeditiously and pass it to-day.

Mr. Chairman, I desire leave to print in the RECORD my remarks at a mass meeting in the Garden Theater at Charleston, S. C., under the auspices of the War Camp Community Service, an organization which has performed a great service for the soldiers not only at Charleston, but at all the important war camps, a service which the soldiers and sailors have assured me everywhere is greatly enjoyed and appreciated by them.

The CHAIRMAN. Is there objection? The Chair hears none.

ADDRESS OF CONGRESSMAN GEORGE M. YOUNG, OF VALLEY CITY, N. DAK., BEFORE SOLDIERS AND CITIZENS AT THE GARDEN THEATER, CHARLESTON, S. C.

Mr. Chairman, I am sure it is a great privilege, as well as an honor, to appear before this splendid audience of soldiers from many of the States and also citizens of this historic city of Charleston. Every minute of this day has been enjoyed meeting your delightful people, visiting points of historic interest, and realizing again the charm of southern hospitality. Soldiers whom I have met to-day, some of them from the far North, tell me that your homes have been opened up to them and that you have overwhelmed them with kindness. I thank you most sincerely on behalf of those boys here from North Dakota, the great wheat State. May I say also that I am glad to see in this audience Gen. Sharpe, a splendid soldier, well known at the Capital and highly respected there. [Applause.]

POTSDAMERS.

This world war has been fought in the main in two ways— with shot and shell upon the battle lines and by propaganda back of the lines. Gen. Ludendorf before the great March drive of this year said:

This war will not be won on the battle lines, but by disintegration back of the lines.

This evidently has been the viewpoint of the Hohenzollerns all the way through. It has been their settled policy, but we have been slow to realize it. Potsdam propaganda, instead of being an incidental thing, has been and still is the chief line of their offensive warfare. So I am going to devote some of my time to-night to Potsdamers. A Potsdamer is a purveyor of German propaganda. He may be of German blood, but usually is not. Sometimes he is a sly devil, who has purchased a few liberty bonds as a screen. His chief purpose is to create distrust and hatred of our allies and advocate things at home designed to prejudice our people against the war. The great bulk of our citizens of German blood have proved their loyalty. The percentage of them who are disloyal are close-mouthed. It is regrettable that many who are not of German blood, even some whose fathers and grandfathers were born in this country, are disloyal. They seem to forget that being born in the United States does not give a man any special privilege to be disloyal. Their notions about freedom of speech are false. I saw German prisoners going through our lines many times, and I say to you with all seriousness I have a thousand times more respect for them fighting for their own country, their sworn duty, than for these traitorous scoundrels in America who owe allegiance to our flag. When we declared war against Germany it included the Potsdamers in America. Those who can not go to Europe to fight them ought to fight them here at home.

Potsdam propaganda is one of our most dangerous and deadly enemies. It put Russia out of the war, and it almost caused the collapse of Italy. Most Americans pride themselves upon being too clever to be deceived by it. We seem to believe that the people of other nations can be misled by German propaganda, but that it will not work in this land of magazines and newspapers, because we know too much. When I was a boy I used to hear a familiar song of the day, which ran like this:

I own the flour mill over here tew Reubenville.

My name is Joshua Ebenezer Frye.

I know a thing or tew;

You bet your life I dew;

You can't fool me, for I'm tew darned sly.

ITALY LIBERED.

We have been fooled often during this war, and we shall be fooled again, perhaps to our great injury, if we are not constantly upon our guard. We were fooled as to the circumstances and reasons which caused Italy to enter the war. It was the business of Potsdamers then and now to create dislike and hatred of our allies. It was said that Italy waited a long time before entering the war, and did so for the purpose of seeing which side would make the biggest bid for her support. Nothing can be further from the truth, and this is the conviction of 10 Congressmen, as well as myself, after a personal visit to Italy. When Germany started its armies toward France those armies had not yet penetrated Belgium. When the Italian armies posted along the French frontier began a backward movement, not stopping until they were 20 kilometers away from the French frontier, they notified France of this, and assured France that no soldiers need be left to guard that frontier. Italy was not prepared to enter the war at the time it began. As soon as Italy was prepared a declaration of war was made against the central powers. The central powers would have won before aid could come from America were it not for the large part played in the war by Italy. She has won imperishable renown for skill and bravery in the mountains and valleys of Italy, in Albania, in Serbia, and at the western front in France.

CLEVER POTSDAMING.

Now, what was the result of the wrong impressions created throughout the United States by Potsdam agents in respect to Italy? First of all, the editors of the magazines and newspapers failed to mention Italy when they drew pictures of the great struggle in Europe, stopping when they had mentioned Great Britain and France, and since our entry stopping after mentioning France, Great Britain, and America. When public speakers grew eloquent they told of the combined efforts of France, Great Britain, and America, and at least some of their speeches were good enough to find a place in the newspapers. Then Potsdam agents assigned to work in Italy saw that these newspapers were called to the attention of all the public men of that country and many other men of influence, with a pencil memorandum on each one saying, "What about Italy? Will she be forgotten also when the final treaty of peace is made?"

DINED WITH KING.

We met a gentleman on the steamship *Rochambeau* who had been in Italy during the past four years. He said that American public men had been coming to France and England without even making a hurried trip to Italy. He urged us not only to go to Italy, but to go there first. Our congressional party did this. Landing at Bordeaux, we took trains direct to Italy without first visiting Paris, where we could have gotten quicker service and better trains. We found the Italians a splendid people. We were shown every possible courtesy and treated with every possible kindness, which we accepted as a tribute of respect to our great country. We had not been in our hotel at Rome an hour before the prime minister of Italy called to pay his respects. There were some public functions, and at all of them reference was made to the fact that we had come direct to Italy. A private railway car was furnished to take our party to Padua, the nearest point to the Piave battle front. Autos met us at Padua to take us to various points along the battle front. Before we had left Rome a telegram was received from the King at the front asking us to dine with him, an invitation which we accepted, and we greatly enjoyed his hospitality. The King talked as good English as I have ever heard spoken in this country, and eagerly sought American views respecting the war. He invited us specially the following day to witness the conferring of medals upon those who had distinguished themselves at the battle of the Piave. We accepted that invitation also. Among those who received medals were nine representatives of the American Red Cross.

The criticism that Italy waited too long before entering the war reminds me of the dialogue between an American soldier and a waiter in an English restaurant. A group of American soldiers went into the restaurant and called for coffee. One of the boys said, "Here, waiter, this coffee is cold," to which the waiter replied, "Well, it ought to be cold; it's been waiting for you three years."

HOW THEY OPERATED IN FRANCE.

Propaganda in respect to France could not be expected to get very far in any of the other allied countries. Poison peddlers could not make much headway against the genuine sympathy which has always existed for poor, bleeding France, but the Potsdamers were able to do a lot of damage with people back of the lines right in France, just as they have done and will do here if we let them. But of late there have been some criticisms current here even about France. When we got to New York to take the boat some one told us that France was breaking it off into us from a financial standpoint, and that she was charging us even for the rent of the trenches our boys were fighting in. Upon arrival at Bordeaux, I asked our base general there whether this statement were true. He said he had heard it, but did not know whether it were true or not. I inquired of many others but did not get any direct information until we got to Gen. Pershing's headquarters. The answer there was very short. It was a lie. We had never believed it could be true, but we wanted to have an authoritative denial of it before returning.

ADMIRAL WILSON FIXED THE PROFITTEERS.

They told us that the French people were profiteering in their dealings with our soldiers. Perhaps they are, but in my judgment not to nearly as great an extent as the tradesmen of our own country. The only difference is that some of our officials in France seem to be able to cope with it better than we do here at home. Admiral Wilson is the commander of our Navy in French waters. At a large hotel in the city where his headquarters are located the prices were advanced on account of the very large number of American soldiers landing there. Admiral Wilson took it up with the management, but could not get anywhere. Then he took it up with the mayor of the city, who listened to him politely, but did nothing. Then the admiral posted some marines in front of the hotel, with orders to arrest

all Americans who attempted to enter. The proprietor of the hotel was around to see the admiral at his headquarters before sundown, agreeing to fix a scale of prices to suit him. The admiral insisted that the price of every room must be indicated on a placard attached to the door of each room. It is the only hotel I have ever seen on the Continent where the prices were so indicated.

FRENCH WANT TO FIGHT IT OUT.

We were the guests at dinner while in Paris of M. Bouillon, minister of information in the cabinet of M. Clemenceau. He told us of the tremendous sacrifices made by the French people. The total figures of the killed and wounded were not available, but he said that 1,500,000 had been either killed or seriously wounded. After drawing a pathetic picture of the privations and sufferings of his countrymen, he said:

If we could have to-day a separate peace with Germany, with Alsace and Lorraine given to us, we could not afford to accept it, even if it were agreeable to our allies, because our future peace would still be menaced by German militarism, and our killed and wounded countrymen would have shed their blood in vain.

M. Bouillon's statement fairly indicates the temper of Frenchmen. There was a time when with hard fighting long continued, with consequent privations and suffering at home, their morale had suffered somewhat. They were badly discouraged at the time Marshal Joffre was sent to America to urge the immediate sending of our troops to France to be trained there instead of here. That was for the purpose of bringing encouragement to the people of France, and the coming of the Americans justified the plan. All France was enthused and inspired by the landing of the first American Army. The morale in Italy also suffered at one time, but was excellent at the time of our visit.

ENGLISH WORKMEN SAID, "TO HELL WITH GERMANY."

We could not learn that at any time was the fighting spirit let down in Britain. They seem to be built to stand punishment, and at no time had any thought of quitting the fight or accepting a compromise peace. They were unshaken by the terrible German drive, made with greatly larger forces, last March. To illustrate the feeling at home in England, let me read certain resolutions, adopted a few days after that disastrous drive, by workmen at the Woolwich Arsenal:

Resolved, That the engineers assembled at this public meeting of the workers of Woolwich Arsenal pledge themselves to support the country in fighting until the German military machine is smashed.

They say, "No peace by negotiation with the present rulers of Germany."

They say, "To hell with Germany as at present constituted, and to hell with Ramsey MacDonald, Philip Snowden, and other pacifist leaders." The engineers of Woolwich Arsenal are Englishmen, and they demand to be led by men who love their country.

[Applause.]

FIGHTING WITH FRENCH LANGUAGE.

In some portions of France there is still in vogue the old custom of driving the goats about the streets, milking the goats, and delivering the milk as it is needed by the various patrons. Some of the members of our party encountered difficulties with the French language. One of them in a restaurant was trying very hard to let the waiter understand that he wanted some milk. Finally he pointed to a large jar on a table which would hold 2 or 3 gallons, making a motion with his hands as though milking and at the same time imitating the bleat of the goat. The waiter hurried away and brought him in 3 gallons of milk immediately. [Applause.]

We heard also that Mr. Balfour, ex-Prime Minister of England, had an amusing experience with a Frenchman while he was visiting Paris. The Frenchman very politely said, "Mr. Balfour, I am sorry that I have cockroached so much upon your time." Later a friend called him aside and said, "You made a serious blunder; you should have said 'encroached.'" "Oh," said the Frenchman, "I thought it was 'enroached' when addressed to a woman and 'cockroach' to a man." [Applause.]

GREAT BRITAIN CALLED A SLACKER.

The most fertile field for the Potsdam poison peddlers has been in respect to Great Britain. The most common criticism is that England has been a slacker. Let us see how much truth there is in that statement. During times of peace Great Britain had an understanding with France that in case the latter were invaded by Germany she would see to it that the ports of France were kept open to commerce and would also furnish the greater portion of her then very small standing army, which was very little bigger than that of the United States in time of peace. When the Germans put their armies in motion toward France, Great Britain sent her small army of about 120,000 men to aid the French and immediately began to raise and train an army. It was no part of her agreement or understanding to do this. She had at the time the war began a navy equal to the total of the three next largest navies in the world, and after having sent

120,000 soldiers to France had fully complied with every requirement of honor in respect to her understanding with France. The plan prior to the war was that France should have a large army and Great Britain a large navy. France did have a large army but not great enough to cope with the unexpected strength of the Germans and Austrians. Great Britain raised by enlistment seven and one-quarter million men.

TWO MILLION FIVE HUNDRED THOUSAND BRITISH CASUALTIES.

In addition to this let us see what a further examination of the facts discloses as to whether England was a slacker. Sixty per cent of the enlistments were made in England; 70 per cent of the enlistments were made in England and Wales. There have been 2,500,000 casualties in the British Army. To the frequently made statement that the colonies have been made to do the fighting it is sufficient to say that the colonies have furnished of the great army just mentioned 900,000 soldiers. It would have been physically impossible to make them do all the fighting even if Great Britain had been as mean as Potsdamers would like to have her appear. There is one man serving in the army for every 15 of population in the colonies, and that is by no means a poor showing.

Our neighbor to the north, Canada, has furnished 500,000 soldiers. If the State of New York had the same ratio of men in the service she would have more than 1,100,000.

SCOTLAND BEATS THEM ALL.

But the record of the colonies has been outstripped in the motherland. One out of every 10 of population in Wales is in the service; 1 out of every $7\frac{1}{2}$ in England and Scotland combined; and 1 out of every 5 in Scotland. This means that practically every able-bodied man in Scotland is at the front. To visualize this, if all our soldiers oversea were from the one State of New York the percentage of enlistments would be considerably short of Scotland. It is the greatest record in respect to percentage of enlistments of any country in the world during this great war. Those of us who happen to have a little Scotch blood in our veins should be proud of dear old Scotland. [Applause.]

IRELAND MISREPRESENTED.

Now, what are the records as to casualties? In England and Wales, with 70 per cent of the enlistments, they have 75 per cent of the casualties. That does not look like letting the colonies shed all the blood. In Scotland, with 8 per cent of the enlistments, they have had 10 per cent of the casualties. In Ireland, with 6 per cent of the enlistments, they have had 6 per cent of the casualties. Ireland has been grossly misrepresented. She has 375,000 men in the service, a greater percentage than yet raised in any one of our States.

48 PER CENT OF GERMAN ARMY IN FRONT OF BRITISH.

Another favorite piece of Hun propaganda is to state the number of miles of line in France held by the British as compared with the French, with the hope of making it appear that Britain is a slacker. Gen. Pershing showed us a very large map, giving the location of every German regiment and which showed that they were massed in front of the channel ports and Paris. I obtained reliable figures at the headquarters showing that during the year 1917, 48 per cent of the German troops were in front of the British lines. The amount of fighting is more apt to be determined by the number of troops present than the number of miles of trenches held, and the reports have shown heavy and almost constant fighting on the British front.

KNOCK HIM DOWN AND ARGUE AFTER.

Admiral Fisher, a sturdy old British salt, frequently gives utterance to this sentiment:

"If a man insults you, knock him down. If argument is needed, you can have it after."

If a man insults you by abusing our allies, knock him down. France, Great Britain, and Italy for four long years interposed their bleeding bodies between the Huns and all that civilization holds dear. It is a privilege and honor to fight with them. [Applause.]

POWERFUL BRITISH NAVY.

The Navy of Great Britain has been increased more than threefold since the beginning of the war; that is to say, from 2,500,000 tons to 8,000,000 tons, which of course includes auxiliary vessels. The British merchant marine, which could not have operated without the protection of the Navy, has transported 13,000,000 men, 2,000,000 horses, 500,000,000 vehicles, 25,000,000 tons of explosives, 50,000,000 tons of oil and fuel, and 130,000,000 tons of food and other stores. Franklin D. Roosevelt, in a statement handed out in London recently, said that 60 per cent of the troopships used for the transportation of American soldiers were British.

When we talked to our own Admiral Sims at London he was extravagant in his praise of the British Navy. He said that the war vessels operated by Great Britain were greater in number than the entire number from America, France, and Italy. He said that the British Navy was the keystone of the arch of the allied structure, and that if it could be destroyed and the control of the sea eliminated the allied cause against Germany would be more than hopeless, it would be lost. He said that France could not be coaled or fed, neither could Italy, and that Great Britain itself would be starved. The splendid work being done by Admiral Sims at the head of the great American Navy in cooperation with the other navies—and the British are extravagant in their praise of our Navy—means that there will continue to be a constant stream of munitions and men to the battle fields of Europe and that food will also come in sufficient quantities.

I have not been giving these facts in respect to the British Navy to in any way detract from the glory of our own fleet, but rather to show how unjust and villainous are the criticisms of men who have either accepted Potsdam gold or have been fooled by them. There has been a marked decrease in the ravages of the submarines since America's entry into the war, and everywhere we went in Great Britain the people were glad to give America credit for that result.

AMERICA'S SILENT NAVY.

Sometimes ours is called the silent Navy. The British Navy is also silent. Only rarely is there a message in our newspapers about the deeds of either of these navies. If our people could see, as some of our party were privileged to see, the grand fleet made up of American and British war vessels of the line, which in battle formation would be 72 miles long, they would have some idea of the mighty force which is holding the navies of Germany and Austria at bay.

ROBBING OUR NAVY.

Our superb Navy is silent; and we are not only silent about what it is doing, but sometimes give credit to others for what the Navy is doing. For instance, the ships used for transporting our soldiers are entirely in charge of the Navy and manned exclusively by the Navy. When we got to New York we saw signs which read, "This way to Army transports." They are called Army transports quite generally throughout the country; and so, perhaps without intending it, we rob our Navy of credit for a tremendous transportation task which it is performing in a very efficient way.

THE STEAMSHIP "LEVIATHAN."

To illustrate, we came home by the biggest ocean liner afloat, the *Leviathan*, formerly known as the *Vaterland*. It is a ship of 69,000 tons displacement. Its length is equal to about three average city blocks. It has a crew of about 2,000. Think of the task in securing seamen for such a boat from a country like ours, made up almost entirely of landmen. Practically all of the seamen, artificers, firemen, and so forth, had never been on the sea in their lives when the war broke out. This big, inexperienced crew was whipped into line by only five graduates of our Annapolis Naval Academy. Capt. Bryan apparently devoted himself to the navigation of the ship, never having left the top officers' deck during the entire voyage. Considering the submarines, that is job enough for one man. Commander J. H. Blackburn was the executive officer of the ship. The chief engineer, the assistant engineer, and the gunnery officer were also Naval Academy graduates. It is a difficult task to manage a ship so large as the *Leviathan*. The first two times the Germans brought her to New York they knocked over the pier. Our men have had no trouble in managing her, and have taken her in and out of the ports without the slightest mishap. They docked her safely the very first time in 30 minutes. The chief engineer is getting 2 knots per hour better out of the ship than her former owners.

Up to August 20 this ship alone had transported 99,294 soldiers. At the time we went on board she left port exactly 48 hours after her arrival and had discharged 11,500 people, unloaded 3,000 tons of freight, besides 9 complete airplanes and 50 Liberty motors; also loaded 4,500 tons of coal from lighters, 2,800 tons of water, and a cargo of westbound passengers of 715. It used to take at least five days for this boat to get in and out of port. The same officers and men who did this work at the French port stood lookout duty for submarines, immediately after the ship left port, through the submarine zone.

To my mind it is nothing short of a miracle what has been done on the *Leviathan* with a green crew. I mean green in point of experience. They were a splendid lot of young men, who enlisted to help Uncle Sam win this war. They answered to the call of patriotism. One of them, Homer Hill, turned the key on a good store at Sutton, in my congressional district, to

do what he called his bit. Commander Blackburn said they just had to make a crew out of the material they had. And how they worked at it! The men were continually being assembled in groups and schooled in their duties. I presume crews of the same kind were obtained and trained in the same way for something like 40 other Navy transports, to say nothing of the many cargo ships. Nearly all the soldiers now going across are being transported by our own Navy transport ships. The great service of this branch of our Navy is seldom thought of. Considering the constant danger of submarine attack, their service, though less spectacular than that on the battle fields, calls for no less courage and valor. We may well be proud of our splendid Navy, every branch of it.

WHAT OUR GOVERNMENT IS DOING.

It is next to impossible to get an accurate idea of what our Government has done in France. It has been a tremendous task, which has been done in a big way by big men. A railroad has been built across France, and, believe me, the big mogul engines looked like friends from home. Immense storage capacity has been constructed at various points; at one of them the biggest cold-storage plant in the world. We have seven well-equipped ports. At one of them 150 miles of sidetracks have been constructed. Along these 152 warehouses had been built and material for many more was on hand—all this to take care of our brave boys. In the same port long wharves had been constructed and equipped with the latest loading and unloading machinery and devices. The biggest freighters, which had formerly in that port required 21 days to unload, are now unloaded in 5 days.

ARMY SURGEONS.

Everything back of our lines shows foresight and thorough organization. Our medical service, both in field and hospital, is admittedly the best of any of the armies. It was my privilege to check up the medical service by personal visits all the way from the battle field back successively through the emergency field hospitals, the evacuation hospitals, the base hospitals, and on this side of the ocean our general hospitals. The general hospitals in the United States look after those soldiers who are so seriously wounded that they can not be returned to the fighting forces. It tugged at the heartstrings to see our poor wounded boys on the battle field and in the hospitals, but we were filled with admiration for the skillful work of our surgeons and nurses and the exceptional facilities of every kind furnished by our Government for the use of the surgeons, nurses, pharmacists, and all others connected with the Surgeon General's Department.

REHABILITATION OF DISABLED SOLDIERS.

Of all the activities of this wonderful department I was most impressed by the very comprehensive plans to make every disabled man self-supporting before being discharged from the hospitals. A boy who had lost his left arm and who had been working in a factory was being taught telegraphy, not only in the hospital but right in bed. It eased his mind to know he would be able to do something useful, and the time devoted to practicing with the telegraph key in bed took his mind from his troubles and hastened recovery. A boy at Walter Reed Hospital, from Bismarck, in my own State, lost his left arm at Cantigny. He had been a musician and played the violin beautifully. It was clear he could never hope to make a living out of music. The reconstruction men discovered he had artistic ability and could draw well. He is being trained for a magazine illustrator, and his instructor says he will succeed, declaring he has a skillful touch, originality, and imagination. I felt so enthused and happy over all that had been done for the health, welfare, and restoration of our wounded boys I made a special trip to the War Department to personally thank such men as Surg. Gen. Gorgas; Col. R. B. Miller, in charge of personnel; Col. Frank Billings, director of reconstruction; Col. Harry Mock, assistant director; Maj. A. C. Monahan and Maj. M. W. Murray, of the education section of reconstruction. Any of you who desire to know more about this wonderful reconstruction work should write to me or speak to me about it, and I shall send you a printed copy of my address in Congress upon this subject, telling what is being done for disabled soldiers not only in our hospitals but also in the British reconstruction hospitals which I visited.

RED CROSS.

While I have not made mention particularly of the Red Cross, the work of that splendid organization dovetails in with the work of the Army surgeons in such a way as to make it impossible to speak of Army surgeons or hospitals without thinking at the same time of Red Cross doctors and Red Cross nurses. These branches of the service work together so harmoniously that one who visits Europe can not help regarding them simply as one organization. About the only difference

is that the Red Cross carries on a number of activities outside of the Army proper and outside of the hospitals. I noticed in a dispatch recently that the Red Cross had rented some hotels along the Riviera where wounded soldiers might rest along the quiet and delightful shores of the Mediterranean. A great work is also being done by the Red Cross with the civilian population of France. A wonderful work is also being done in Switzerland for our prisoners detained in Germany, and for Russian refugees in Switzerland. The Red Cross is entitled to our prayers and our financial support.

RABBI KOHN.

I wish I had time to speak of the other organizations working for the good of our soldiers and sailors. On the boat going over there were representatives on board of seven different organizations: The Red Cross, Y. M. C. A., K. C., Jewish Welfare Board, Canteen Workers, War Camp Community Service, and Salvation Army. Frequent meetings were held on board, in which representatives of all the organizations took part. The best address was delivered by Rabbi Kohn, of New York. He said:

For 40 years the Germans have been preaching that the creed of justice, mercy, and love is the creed of slaves; that the Jews who first preached it were a weak people who could only hope for safety by appealing to others for mercy; that it was preached in the centuries after by masses of people who were weak and must whine for mercy as dogs crushed beneath the master's heel. It is for the great democracies of the world now to prove that the God of mercy and of justice is not only the protection of the weak and the oppressed, but that it is the glory of free men, and that by their strength with the help of God the heresy of the Hun shall be repudiated.

Y. M. C. A.

When our party got ready to return to Paris after our most interesting and delightful meeting with Gen. Pershing, I concluded to break from the party long enough to visit some old friends at Chatillon-sur-Seine, where four of the companies of the old First North Dakota are located. Maj. Charles Mudgett, of Gen. Pershing's staff, went with me. We reached the camp about 8 o'clock at night. After we had lunch, Capt. Ritchie, of my home town, suggested that we attend the movies. I was rather tired and preferred to visit with him and some of the other boys from home. He said, "I want you to see how our boys enjoy the movies; practically all of them will be there; it is by all odds the best institution over here, and the Y. M. C. A. ought to get credit for it." We found every seat taken and at least 50 standing at the back.

HAVE PLENTY OF WHITE BREAD AND SUGAR.

I wish the fathers and mothers of this country could understand how completely the needs of the boys have been anticipated and provided for. I have heard, and perhaps you have heard, more or less grumbling about eating dark bread, and I have even heard men say that they objected to eating dark bread here in order that the French might have what they were accustomed to—white bread. I want to assure you that not only the French but the English and Italians have been and are still eating a war bread darker than we were eating up to the time Mr. Hoover raised the ban on white bread. The only white bread being eaten on the entire Continent of Europe at this time is eaten by our American soldiers, and they have all they want of it. And, another thing, our boys are not rationed on sugar. God bless them, they have all they want of it. [Applause.] That should take the sting out of any trifling inconvenience we have been to in this country.

FRENCH CHILDREN LOVE OUR BOYS.

Another thing I would like to have our people know—and I can not emphasize it too greatly—our boys are clean morally, are temperate, and the healthiest aggregation of men ever gotten together in the world. It is said they are giving money to the little French children and teaching them the vulgar habit of chewing gum. This is all true, but I think we should be proud that our men love these little children and that the little children of France love and trust them. [Applause.]

FIRST GREAT DRIVE, 1918.

Mr. Chairman, after Russia was put out of the war Germany determined to mass her strength against the allies, with the hope of capturing Paris and forcing a decision before America could put an army in the field.

After greatly increasing the strength of their army by soldiers withdrawn from Russia, the first great German drive was made this year upon March 21 in the direction of Amiens along a front from Arras to Soissons. As a part of this drive a blow was struck south of Ypres. The first drive was very successful from the German point of view. The British were rolled back with apparent ease. Finally the British balked the drive.

SECOND GREAT DRIVE.

Then after about a month's preparation the second great German drive was launched on May 27 along a line extending

from Vauxaillon, almost directly north of Soissons, and Brimont, almost directly north of Rheims. This great offensive was begun by striking a terrific blow with massed forces all along this line, a distance of approximately 40 miles.

The first day they advanced 5½ miles, reaching Pont Arey, on the Aisne River. The bombardment was just as violent as that which heralded the great drive of March 21, and the infantry attack was upon a more formidable scale. Dense waves of infantry followed closely in the wake of a lifting barrage, and fresh troops were pushed up with characteristic recklessness. The back areas were heavily shelled with high-velocity guns, and German airplanes were unusually venturesome.

The Germans forged ahead 7 miles the second day, capturing a portion of Soissons, menaced Rheims, and reached a point in the hills south of St. Thierry and the southern banks of the Vesle. The Germans were strongly reenforced the third day and continued the drive southward, every hour creating uneasiness in Paris and throughout France. When and where would end this last and most powerful German drive? In this emergency Gen. Pershing volunteered to send some divisions of American soldiers in training at a certain point west of the fighting area. These were men who had not completed their training and who were not thought to be ready for actual warfare by British or French officers. The only ones who believed they were really ready were the men themselves. But the emergency was great, so these partially trained troops were hurried along the railway and upon gas trucks to join in the fight. They left the training camps Thursday night and Friday and arrived at the various points along the front between Friday night (May 31) and Sunday morning.

A large unit was loaded into railway trains on Thursday night, traveling all that night and next day without sleep, reaching a point about 5 miles from Chateau-Thierry at 10 o'clock at night, and immediately went into position at Chateau-Thierry. The machine gunners were sent to guard four bridges over the Marne. They had been there only three hours when the German shock troops made a strong attempt to cross the river. They were repulsed. But for three days our men stood there like a stone wall, preventing the passage over the river. Then, in the face of a withering fire from cannon and machine guns, the American engineers advanced and destroyed the bridges, finally stopping the drive at this point, one of the gateways to Paris. [Applause.]

At the same time while the fight was going on at Chateau-Thierry warm fighting was in progress at other points, one of them nearer to Paris than Chateau-Thierry, where the Germans were sweeping forward like a mighty tidal wave. An American brigade reached that point on Sunday morning after having traveled all day and night without sleep. By 4 o'clock in the afternoon of the same day they had been in three fights, in one of which they drove the Germans back for 2 kilometers on a front of 4 kilometers. In this locality was fought the now famous battle of Belleau Wood by the gallant Marines. No more glorious page of American history has ever been written. [Applause.]

THIRD GREAT DRIVE.

At midnight on July 14 the Germans began what was to be, according to their expectation, the greatest drive of all. They called it the *Friedensturm*—storm of peace—the great peace offensive. The plans for this drive were more carefully laid and upon a greater scale than for any former offensive. They confidently expected to go through to Paris, and many in France held the same view. Our congressional party was at the time near Paris, and we were assured that we would not be permitted to enter, as it was claimed that preparations were being made to have all the civilian population leave the city, to be ready for a siege or possible evacuation. This may not have been in actual contemplation, but it reflected the feverish condition of the public mind. The people back of the lines were very apprehensive. They believed if the Germans were to go as far as they had upon the two former drives, that if they would not reach Paris they would get near enough to it to shoot it to pieces with their big guns.

The German drive of March 21 was a surprise. The drive of May 27 was almost a surprise, the notice of it being very short. The last big drive was no surprise at all. The allies had been expecting it for several days and had troops massed to meet it. It was expected that the enemy would attempt to break through toward Paris at Chateau-Thierry and points northwest and also east of there, and that is where the fighting occurred for the most part. As the Germans were in great force and as Foch had massed forces of almost equal numbers, the shock of battle was terrific. The Germans confidently expected to override all opposition, and the charge was made all along the front with great dash in massed formation. At places the allied lines

broke. The Marne was crossed at 10 places, but at none of these points did they get very far excepting south of Jaulgonne, where they penetrated several miles. They were soon driven back there and elsewhere.

AMERICANS PRESENT IN FORCE.

Americans figured largely in these operations. The troops which had been rushed over to the area about Chateau-Thierry in May to help stem the Hun advance were still there and had been liberally reenforced. The Government has not given out any figures as to the number of Americans employed in the fighting just referred to, but from what I know of the units employed there must have been more than 150,000. This was a strong force to add to the already strong forces of French and British and was sufficient to turn the gage of battle. The enemy was obliged to fall back and was kept on the move pretty fast for the next couple of weeks. I think it may be truthfully said that the most critical time in the war after the first Battle of the Marne was during May 31 and June 1 and 2, and the turning point of the war was definitely settled on July 15, 16, and 17. We Americans should be very proud that our troops were present at both these periods in sufficient numbers to save the day. The belief was general with those with whom I talked in France that if our men had not been available the Germans would have gotten at least close enough to Paris to have shelled it to the limit. There seems to be a notion that our troops did not figure in these operations in a big way; that they were only participating in battalion units wedged in between the British or French. That is not true. We had several divisions along that line, and they were handled in division units. The reason the newspaper dispatches of that period did not reveal this was doubtless to keep from the Germans as long as possible the extent to which Americans were being used. And I will say this, the American newspapers contain very much more complete and thorough accounts of the war than the Paris or London papers.

BELLEAU WOOD AND CHATEAU-THIERRY.

It has been my privilege to be at practically all the places referred to, but at only part of them when the fighting occurred. Where I was not an eyewitness to the fighting, I obtained information at first hand from such men as Col. McClusky, who commanded a brigade at Bois-de-Belleau. No one is waiting more anxiously than myself for an authentic and thorough history of this war. I wish it were possible to give you a running account of all the places visited. It would take too much time. Mieux was a most interesting point. This point was reached by the Germans in the first battle of the Marne. It is located about 20 miles from Paris. Here we found trench systems prepared ready for use in case the allied armies were pressed back. This confirmed the fears of the people, or at least showed that the army men were preparing for such an emergency. At this place we were furnished with metal helmets and gas masks. Chateau-Thierry was left in horrible shape by the retreating Huns. The fine homes were ransacked and all things of value were carried away. We visited the chateau, located upon an elevation at the edge of the city. Two soldiers were guarding it, but there was little, if anything, left to guard. If Chateau-Thierry is a fair sample of what was done by the Germans in other occupied territory no wonder the French fight furiously.

MARKSMANSHIP SUPERB.

Vaux furnished us with evidence of the wonderful accuracy of the American artillery. The town was actually shot full of holes. Not a single building escaped, and each building was struck from one to three times. It was here, after the artillery preparation, that our boys advanced rapidly, taking 654 German prisoners from the basements of the buildings, which was done without the loss of a single soldier. And the remarkable thing about it was that all of the shooting was done simply by the use of a map. The map was an accurate one, but the marksmanship was not aided by observation balloons or aeroplanes. It reminds me of a story of my friend, Congressman BARKLEY, of Kentucky. He tells about an old darkey, who said: "Them new long-distance 44-caterpillar guns can just nat'ly get you anywhere. All they need is your name and address." [Applause.]

HOW THEY FIGHT.

Of course, the most thrilling thing of all was to see our boys actually fighting—and how they do fight! No one who has not been present to see some of the fighting and talk with the men can appreciate the eagerness of our boys to get into battle. When they are back at the training camps they are impatient to get to the front and when they get to the front they are not easy until they get into the thickest of the fighting. I talked with Capt. Campbell, of Grand Rapids, Mich., who stood with wounded

hand and a wound in the leg and told of the trouble he had had holding his men back. He had deployed some of his men to capture some machine guns from the flank. The remaining portion of the company evidently did not know that this had been done and he could see very plainly that they were intending to charge the machine guns from the front without any order from him. He called out that he did not want any charge and still noticed evidence of their intention to go forward. So he rushed out in front of his men with a pointed revolver saying, "I have not ordered a charge; I do not want a charge, and the first man who gets in line with this gun will be shot." [Applause.]

We were told, but I can not vouch for the truth of it, that the commanding officer told a certain major that his objective would be to a certain rock on an elevation and that he was to halt his battalion there. Instead of stopping there they went on a mile. The commanding officer criticized him. He said, "I told you to halt at that big rock. Why didn't you stop there?" To which the major replied, "Well, if these Germans could not stop our boys, how in thunder do you think I could?"

In the fighting in May, northwest of Chateau-Thierry, one of our boys received a bullet wound in the neck from a machine gun. The bullet went about half way through and dropped down into his stomach. He got out of the hospital in time to be back with the boys again when they began fighting in July and the company with which he served was ordered to clean out a nest of machine guns. When the boys started forward this wounded boy turned to the others with a laugh, saying, "Let me take care of those machine-gun bullets. I'll swallow them." [Applause.]

MAGNIFICENT FIGHTERS, BUT ROUGH.

The Australians have the reputation of being rough-and-ready fighters, with the accent on the rough. They call their captains Bill and Tom, and when they got to France the British officers thought they would not amount to much, because it was said they had no discipline, but when the fighting began it was discovered the only trouble was to have them stop when they had reached their objectives. While we were in London an invitation was extended to us to attend a government concert on Sunday night in one of the big theaters. There are no theatrical shows permitted on Sunday night in Great Britain, but Admiral Sims assured us we need not be scared away by the name "concert." The show was certainly a live one. Have never seen anything to equal it upon the vaudeville stage here. Talent was picked up from all the big theaters in London—grand opera singers and others—but the most interesting and exciting thing of all was some stunts put on by a company of Australian soldiers. Among other things they put on a bayonet drill. The stage was very large, and the men rushed at each other with great speed, pointing the bayonets straight at the men opposing them. It was up to the man who was being charged to strike the bayonet quickly enough and hard enough to ward it off. On one of these rushes, while the bayonet thrust was warding off, one man was struck with such terrific force he was thrown upon the stage, his head hitting the hard floor with great force. He was carried from the stage insensible. Having heard these things about the Australians and having seen this performance at London, we were able to appreciate a joke which one of the Australian boys got off. He was asked, "What kind of fighters are the Americans?" "Oh," he said, "they are splendid; they are great; they are magnificent fighters, but," with a twinkle, he added, "they are pretty rough." [Applause.]

SAVED PARIS.

Capt. Liggett, a Civil War veteran, now an official in the Interior Department at Washington, called to see me last Thursday, because he heard that I had seen his son in France. He said, "Mr. Young, I am hoping that our boys will march into Berlin." I replied, "Captain, they have done a bigger thing than that. They stopped the Germans from marching into Paris." [Applause.]

HUN MISTAKES.

There has been some talk about American mistakes. Ours is not the only country that has made them. Brand Whitlock, our ambassador to Belgium, says that the German capacity for blundering is almost as great as the German capacity for cruelty. The Hohenzollerns blundered when they forced Great Britain into the war. The best critics believe they blundered with their massed formation of troops when making a charge. They blundered when they introduced poison gas, an invention of the devil, because they failed to take into account that the wind blows five days toward their own armies for every two days it blows in the direction of the allies, and, besides, the allies have more gas shells now than have the Germans. They blundered when they put so much money into Zeppelins, which have been of no particular value at the battle fronts, and when used in England to bomb women and children only hastened and ac-

celerated the enlistment of British soldiers. They also blundered when they insisted upon using the submarine, otherwise America might not have entered the conflict. But perhaps their biggest mistake has been the systematic deception of their own people. All their battles have been victories, and when compelled to fall back it is said to be only for strategic purposes. Upon occasions such as when the Americans got after them in July they were evidently just running for exercise.

Recent successes have made all of the allied countries feel very optimistic. To my mind, there is danger in this. Allied overconfidence at this time or at any time prior to the actual collapse of Germany might result to the decided advantage of Germany. Overconfidence in this country, taking the form of a slackening of work, might be fatal. Certainly it would contribute to the unnecessary killing of American boys at the front. Those who think all the fight has been taken out of the Germans should read about the Seven Years' War, when Prussia, with 5,000,000 people, was faced by enemy countries with a population of 100,000,000 people. The first year they struck quickly and unexpectedly and won some battles. The second year was largely a draw. The third year brought reverses. The fourth year they were badly defeated. The fifth year they were badly punished, and the sixth year was disastrous to them, Frederick the Great being in despair, with no food, no horses, no munitions of war, and no possibility of obtaining recruits for his depleted army. In the seventh year of the war no victories were won by the Prussians, but a peace favorable to Prussia was obtained because of disaffections among the allied countries. We should not close our eyes to the facts of history. To my mind, this is the time for redoubling of effort at home as well as at the front. Let nothing turn us from the task—neither overconfidence nor Potsdam propaganda.

The last word that the square-jawed Gen. Pershing said to us when we left his headquarters was, "We must fight for an American peace," by which I am sure he meant unconditional surrender. Let us all continue our efforts without let-up until that is accomplished. [Applause.]

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 25 (legislative day of Thursday, October 24),
1918.

Mr. HEFLIN. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD I desire to answer the Republican charge that the South is in the saddle and is being favored by the administration, and so forth. I am giving figures as to amounts spent in the North and South. I am also printing the President's appeal for a Democratic House and Senate.

Mr. Speaker, in the midst of the greatest war of the world, and while our boys from every State in the Union are fighting and dying to save our liberty and civilization itself from destruction by the Hun, Republican leaders here at home in both branches of Congress are misrepresenting the Commander in Chief of the Army and Navy and appealing to sectional prejudice for political purposes. They have criticized the Commander in Chief of the Army and Navy for establishing some of the camps and cantonments in Southern States. The truth is, and these Republicans all know it, that these camps and cantonments were placed in the South because the training of our boys could be carried on more rapidly there, where the climate permits outdoor work to be done every day in the year. Republicans in Congress have accused the administration of favoring the South in the expenditure of money for war purposes. The most ridiculous and barefaced of all these misrepresentations was indulged in by Mr. Robbins, a Republican Member of Congress from the State of Pennsylvania, in Congress in a carefully prepared speech on the 21st of September, 1918.

The amount of money spent for camps and cantonments in the State of Pennsylvania was \$8,892,732. This amount is more than was spent in any of the following Southern States: Florida, Kentucky, Louisiana, Mississippi, New Mexico, North Carolina, and Oklahoma. In the State of New Jersey there was spent \$51,103,884.79. This is more than was spent in the seven Southern States just mentioned. In that bitter tirade against the administration, Mr. Robbins said:

This very small expenditure of war funds in Pennsylvania is unfair and rank discrimination against my State. Certainly—

He continues—

Pennsylvania has not been passed up, slighted, and ignored because she has failed to do her part; it must then be for partisan or sectional reasons.

Again, he says that these expenditures show—

conclusively that political influence has been brought to bear on the Secretary of War and that he has not only made these expenditures for political reasons but for sectional purposes also.

Then he said that the Republican Party—

feels a grievance at the unjust treatment it and the Northern States of the Union have received at the hands of the Secretary of War, at the instance of the majority party.

To the end that no one shall be deceived by these misrepresentations, I desire to submit some facts and figures regarding the expenditures of money for war purposes. Four hundred and ninety million dollars is the total amount spent on training camps and cantonments in all of the Southern States since the beginning of the war. For the brief period of four months ending August 31 this year, the Government expended for war purposes in the city of Philadelphia \$321,000,000 and in the city of Pittsburgh \$134,000,000, making a total of \$455,000,000 spent in two northern cities in a single Northern State in four months' time, just \$6,000,000 less than the whole amount spent on camps and cantonments in all of the Southern States for the whole period of the war.

And yet Mr. Robbins would have the people of the United States believe that his State—Pennsylvania—had been discriminated against and the South favored by the Commander in Chief of our Army and Navy. In New York, a northern city, we expended for war purposes in just four months' time prior to August 31 this year \$528,000,000, \$67,000,000 more than the amount expended for training camps and cantonments in all of the Southern States. These figures have been furnished to me by the War Department, and they could and should have been obtained by these reckless Republican leaders before they attacked and misrepresented the Commander in Chief of the Army and Navy. In the four months ending August 31, this year, we expended for war purposes in the 10 northern cities of Philadelphia, Pittsburgh, Boston, Chicago, Cincinnati, Cleveland, Detroit, New York, Bridgeport, and Rochester a total of \$1,973,000,000, one-third of the last liberty loan, and \$1,512,000,000 more than all the cost of all the camps and cantonments in all the Southern States. And yet in the face of these colossal expenditures of money for war purposes in Northern States Republicans are trying to create the impression that the South has been singled out by the President for special favors.

Here is another remarkable statement from Mr. Robbins's speech:

Another matter should be noted in this connection. Not only are the Northern States furnishing men greatly in excess of those furnished by the South to fight this war, but the Northern States are paying by far the greatest part of the income tax, which is the chief source of financial support of the Federal Government at this time. It is therefore established by these authentic figures beyond the peradventure of a doubt that not only is the North furnishing the great preponderance of the money and men to fight this war, but that it has received scant consideration, indeed, from the Secretary of War in the acknowledgment of these invaluable services in the distribution of war activities.

Let the figures answer Mr. Robbins. Population of the States mentioned by Mr. Robbins is as follows:

	Population.
Alabama	2,138,093
Arkansas	1,574,449
Florida	752,619
Georgia	2,609,121
Kentucky	2,289,905
Louisiana	1,656,388
Maryland	1,295,346
Mississippi	1,797,114
New Mexico	327,301
North Carolina	2,206,287
Oklahoma	1,657,155
South Carolina	1,515,400
Tennessee	2,184,789
Texas	3,896,542
Virginia	2,061,612
West Virginia	1,221,119
Total	29,183,240
California	2,377,549
Illinois	5,638,591
Indiana	2,700,876
Iowa	2,224,771
Kansas	1,690,949
Massachusetts	3,366,416
Michigan	2,810,473
Nebraska	1,192,214
New Jersey	2,537,167
New York	9,113,614
Ohio	4,767,121
Pennsylvania	7,065,111
Vermont	355,956
Washington	1,141,990
Total	47,583,198

Would Mr. Robbins require the Southern States mentioned by him, with 29,000,000 population, to furnish as many soldiers as the Northern States mentioned by him with 47,000,000 population? He complains that the Southern States mentioned by him do not pay as much tax as the Northern States that he mentioned. Let the figures answer Mr. Robbins.

Wealth of the Southern States mentioned by Mr. Robbins is estimated by the Census Bureau to be as follows:

	Total wealth.
Alabama	\$2,127,654,930
Arkansas	1,829,521,756
Florida	1,049,138,228
Georgia	2,382,600,866
Kentucky	2,267,777,525
Louisiana	2,164,437,746
Maryland	2,177,958,864
Mississippi	1,344,860,026
New Mexico	513,733,026
Oklahoma	4,581,091,918
South Carolina	1,351,400,753
North Carolina	1,807,473,780
Tennessee	1,920,348,261
Texas	6,859,909,141
Virginia	2,289,913,786
West Virginia	2,303,571,269
Total	36,970,891,789

Wealth of the Northern States mentioned by Mr. Robbins is estimated by the Census Bureau to be as follows:

	Total wealth.
California	\$8,464,204,277
Illinois	15,184,450,232
Indiana	5,164,682,500
Iowa	7,808,454,211
Kansas	4,615,432,538
Massachusetts	6,302,588,392
Michigan	5,427,022,651
Nebraska	3,794,086,781
New Jersey	5,743,032,278
New York	25,011,105,223
Ohio	8,908,432,943
Pennsylvania	15,457,530,277
Vermont	527,261,775
Washington	3,218,360,623
Total	116,017,944,701

The total wealth of the United States as estimated by the Census Bureau is \$187,739,071,090. The total wealth of the Southern States is \$36,970,891,789, which shows that the total wealth of the Northern States is \$150,768,179,301 more than that of the Southern States. Then why should not the States with the greatest amount of wealth pay the greater portion of the war tax?

The Secretary of the Navy has just given me the figures showing the amount of money spent in the various States for naval expenditures. These figures show that in the States mentioned by Mr. Robbins the following amounts were spent. I will only give here the figures in round numbers. In the Southern States we expended in one year \$133,000,000, and in the Northern States mentioned by Mr. Robbins we expended \$814,000,000. This amount is \$681,000,000 more than we spent in the Southern States complained about by Mr. Robbins.

In Mr. Robbins's State of Pennsylvania we expended \$146,000,000, and in all the Southern States mentioned by him we expended \$133,000,000, just \$13,000,000 less than we spent in the State of Pennsylvania, Hog Island included.

I desire to print here the letter and statement received by me from the great Secretary of the Navy, Hon. Josephus Daniels:

NAVY DEPARTMENT,
Washington, October 25, 1918.

Hon. J. THOMAS HEFLIN, M. C.,
House of Representatives, Washington, D. C.

MY DEAR MR. HEFLIN: Pursuant to your request there is forwarded herewith a statement showing the estimated distribution of naval expenditures among the various States. This statement shows the estimated amounts expended in each State for pay of officers and enlisted men on duty in that State, for civilian employees at navy yards, and for miscellaneous services and purchases of stores and materials.

Sincerely yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

Statement of naval expenditures in the various States during fiscal year 1918 (estimated).

	Pay of officers and enlisted men.	Pay of civilian employees at navy yards.	Expenditures for miscellaneous services and purchase of stores and materials.	Total.
Alabama	\$972,000		\$2,000,000	\$2,972,000
Arkansas			100,000	100,000
California	7,971,000	\$9,973,512	45,000,000	62,944,512
Colorado	244,000	117,611	300,000	661,611
Connecticut	1,797,000	74,782	22,000,000	23,871,782
District of Columbia	3,626,000	13,685,089	3,000,000	20,311,089

Mr. ROBINSON charges that the South is in the saddle. Mr. ROBINSON and every other Republican in the House and Senate voted to make southern men chairmen of standing committees.

Here are the facts: While southern men are chairmen of some of the most important committees a majority of every one of those committees comes from the section north of Mason and Dixon's line. In fact, on most of them where the South has the chairman there are 7 members from the Southern States and 12 from the Northern States. So the fact is the northern Members on these committees can always outvote the southern Members if, according to Mr. Fess's idea, they must be arrayed against each other, rather than for all to be working for the good of our great reunited country. The southern Members who are chairmen of House committees were entitled to the promotion received under the seniority rule, which has obtained for years and years under Democratic and Republican control, and the fact is the Democrats who became chairmen when we carried the House were given the rank which entitled them to the chairmanships by a Republican Speaker, who knew at the time he appointed them ranking Members from the minority that they would be chairmen of the respective committees if the Democrats should carry the House. Not only that, but when the Democrats got control of the House they elected the chairman and all of the other members of the House committees. The Ways and Means Committee nominated the members and they were recommended to the House, and the House ratified or rejected the chairman and the members. The present chairmen of committees who happen to live in the South were elected to the positions they hold. Democrats and Republicans alike voted for them. There was not a dissenting vote; no Republican lifted his voice in protest. They were unanimously elected.

Now, when the facts and figures show that the Republican charge that the President has favored the South and discriminated against the North in the expenditure of money for war purposes is absolutely false, the intelligent fair-minded citizen is bound to conclude that the Republican leaders are in a desperate condition when they attempt to stir up a feeling of sectional prejudice at a time when unity of purpose, concert of action, and American solidarity are necessary and most to be desired. The men who will misrepresent the facts and try to deceive the American citizen in the effort to obtain his vote under false pretenses are not entitled to his respect, much less his support. If there ever was a time when the patriots of the Northern States should remind Republican politicians that they have no patience with their miserable attempts to foster a feel-

ing of sectional prejudice, surely that time is now. Boys from Alabama and Ohio, and boys from Georgia and Indiana, and boys from Texas and New York, boys from every State in the Union, are fighting and dying for our country, America incarnated spirit of liberty. And the man who will try to stifle the great and growing spirit of national love and good will amongst our people here at home is a political outlaw and an enemy to the country.

PRESIDENT WILSON ASKS AMERICAN PEOPLE TO STAND BY HIM BY ELECTING A DEMOCRATIC HOUSE AND SENATE.

The men whose boys are fighting at the front will vote with the Commander in Chief.

"MY FELLOW COUNTRYMEN: The congressional elections are at hand. They occur in the most critical period our country has ever faced or is likely to face in our time. If you have approved of my leadership and wish me to continue to be your unembarrassed spokesman in affairs at home and abroad, I can earnestly beg that you will express yourselves unmistakably to that effect by returning a Democratic majority to both the Senate and the House of Representatives. I am your servant and will accept your judgment without cavil, but my power to administer the great trust assigned me by the Constitution would be seriously impaired should your judgment be adverse, and I must frankly tell you so because so many critical issues depend upon your verdict. No scruple of taste must in grim times like these be allowed to stand in the way of speaking the plain truth.

"I have no thought of suggesting that any political party is paramount in matters of patriotism. I feel too keenly the sacrifices which have been made in this war by all our citizens, irrespective of party affiliations, to harbor any such an idea. I mean only that the difficulties and delicacies of our present task are of a sort that makes it imperatively necessary that the Nation should give its undivided support to the Government under a unified leadership, and that a Republican Congress would divide the leadership.

"The leaders of the minority in the present Congress have unquestionably been prowar, but they have been antiadministration. At almost every turn since we entered the war they have sought to take the choice of policy and the conduct of the war out of my hands and put it under the control of instrumentalities of their own choosing. This is no time either for divided counsel or for divided leadership. Unity of command is as necessary now in civil action as it is upon the field of battle. If the control of the House and Senate should be taken away from the party now in power, an opposing majority could assume control of legislation and oblige all action to be taken amidst contest and obstruction.

"The return of a Republican majority to either House of the Congress would, moreover, certainly be interpreted on the other side of the water as a repudiation of my leadership. Spokesmen of the Republican Party are urging you to elect a Republican Congress in order to back up and support the President, but even if they should in this way impose upon some credulous voters on this side of the water, they would impose on no one on the other side. It is well understood there, as well as here, that the Republican leaders desire not so much to support the President as to control him. The peoples of the allied countries with whom we are associated against Germany are quite familiar with the significance of elections. They would find it very difficult to believe that the voters of the United States had chosen to support their President by electing to the Congress a majority controlled by those who are not in fact in sympathy with the attitude and action of the administration.

"I need not tell you, my fellow countrymen, that I am asking your support not for my own sake or for the sake of a political party, but for the sake of the Nation itself, in order that its inward unity of purpose may be evident to all the world. In ordinary times I would not feel at liberty to make such an appeal to you. In ordinary times divided counsels can be endured without permanent hurt to the country. But these are not ordinary times. If in these critical days it is your wish to sustain me with undivided minds, I beg that you will say so in a way which it will not be possible to misunderstand either here at home or among our associates on the other side of the sea. I submit my difficulties and my hopes to you.

"WOODROW WILSON."

"When George Washington was Commander in Chief of the Army and Navy during the Revolution, the American people never failed him.

"When Abraham Lincoln was Commander in Chief of the Army and Navy seeking to preserve the Republic, the American people never failed him, but answered his every call.

"When William McKinley was Commander in Chief of the Army and Navy and we were engaged in a war with Spain, the American people never failed him, but answered his every call.

"President Wilson to-day, as Commander in Chief of the Army and Navy, while we are engaged in the world's greatest war, has asked the American people to stand by him. They have not failed him in the past and will not fail him now."

"SCOTT FERRIS."

I wish to print here the following order:

"UNITED STATES RAILROAD ADMINISTRATION,
"OFFICE OF THE DIRECTOR GENERAL,
"October 22, 1918.
"General Order No. 48.

"This order is issued in lieu of and as a substitute for General Order No. 42 and Supplement No. 1 thereto.

"The issuance of General Order No. 42 was for the purpose of extending to officers, attorneys, and employees in the Railroad Service of the United States substantially the same regulations as to political activity which have been applied for many years through civil-service laws and Executive and departmental orders and regulations to other employees of the United States. These laws, orders, and regulations conform to a wise policy which has long had the support of the people of the United States regardless of political parties. Since the Government has taken control of the railroads and their former officers, attorneys, and employees have become public servants it is necessary that the same policy as to political activity be extended to them as to other employees of the United States. As employees of the Government they can not be properly exempted from the policy applied to other Government employees.

"It has developed, however, since General Order No. 42 was issued, that there are many communities in the United States which are composed largely, and in some respects almost wholly, of railroad employees and their families, and that the proper civil administration of such communities makes it necessary that railroad employees should hold municipal offices. It is clear that in such cases exceptions should be made. Such exceptions have been made by the Government in other cases—such as navy yards in certain localities—where the population consisted wholly or in large part of Government employees, and where it was necessary for proper administration of civil affairs such Government employees should hold local political offices.

"It has, therefore, been determined to permit railroad employees to hold municipal offices in the communities in which they live, provided they do not neglect their railroad duties as a result thereof, and also to limit section 2 to a prohibition against railroad employees acting as chairmen of political conventions or using their positions in the railroad service of the United States to bring about their selection as delegates to political conventions in order to harmonize said section 2 with existing civil-service rules and departmental regulations.

"It is, therefore, ordered that no officer, attorney, or employee shall—

"1. Hold a position as a member or officer of any political committee or organization that solicits funds for political purposes.

"2. Act as a chairman of a political convention or use his position in the railroad service of the United States to bring about his selection as a delegate to political conventions.

"3. Solicit or receive funds for any political purpose or contribute to any political fund collected by an official or employee of any railroad or any official or employee of the United States or any State.

"4. Assume the conduct of any political campaign.

"5. Attempt to coerce or intimidate another officer or employee in the exercise of his right of suffrage. Violation of this will result in immediate dismissal from the service.

"6. Neglect his railroad duties to engage in politics or use his position in the railroad service of the United States to interfere with an election. An employee has the right to vote as he pleases, and to exercise his civil rights free from interference or dictation by any fellow employee or by any superior or by any other person. Railroad employees may become candidates for and accept election to municipal offices where such action will not involve neglect on their part of their railroad duties, but candidacy for a nomination or for election to other political office or the holding of such office is not permissible. The positions of notaries public, members of draft boards, officers of public libraries, members of school or park boards, and officers of religious and eleemosynary institutions are not construed as political offices.

"7. In all cases where railroad officers, attorneys, and employees were elected to political offices prior to the issuance of General Order No. 42, August 31, 1918, they will be permitted to complete their terms of office so long as it does not interfere with the performance of their railroad duties. After the com-

pletion of said terms of office they will be governed by the provisions of this order.

"8. In all cases where railroad officers, attorneys, and employees were nominated for political offices and had become candidates therefor prior to the issuance of General Order No. 42, August 31, 1918, they will be permitted to hold and complete the terms of office to which they may be elected at the general election to be held November, 1918, to the extent that the holding of such offices shall not interfere with the performance of their railroad duties. After the completion of such terms of office they shall be governed by the provisions of this order.

"Railroad men have given ample proof of their loyalty to their Government. I am confident that they will gladly and patriotically accept now those reasonable governmental regulations concerning political activity which their welfare and America's cause demand. They are the same regulations in their general scope and application as all other Government employees have lived under for many years, without the loss of any essential rights and with added dignity to their citizenship.

"W. G. McADOO,

"Director General of Railroads.

"Approved."

I desire to print the following letter in the RECORD. Republicans claim that they have supported the President all along, which is not true. Here is a letter written by Congressman MILLER of Minnesota after war had been declared by the United States, as the date will show:

"APRIL 7, 1917.

"I have not believed circumstances have occurred justifying a declaration of war against Germany. I say this unreservedly, as it has been the position I have openly taken here in Washington. It has seemed to me that a contrary procedure would be the best one under the circumstances, and if war eventually occurs Germany should declare it. However, the President has taken the matter in his own hands, has come out for war—in fact, has committed this country to war—and there is nothing that remains for us to do but support him. It has been my purpose to protect the United States people and their property against submarine warfare and stop at that. However, the President has the power, and he has now exercised it to commit this country to war immediately.

"I appreciate your interest.

"Sincerely, yours,

C. B. MILLER."

Deportation of Alien Slackers.

SPEECH

OF

HON. OTIS WINGO,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 5667) to provide for the deportation of certain aliens, and for other purposes.

Mr. WINGO. Mr. Chairman, the plain object of the pending bill is to draft the slackers who are citizens of England, France, and Italy, but who are residents of this country. These slackers have been living for years in this country, enjoying its blessings, benefits, and protection but have never become naturalized, and now that not only is their native country fighting for its existence, but this country in which they live and whose blessings they enjoy is fighting to preserve the liberty and freedom which guarantees these blessings and protection. They not only refuse to return to the land of their birth and join the army but claim exemption from our draft laws, because they are citizens of another country. In one district there were over 10,000 of these slackers who claimed exemption on account of being citizens of another country. But we are met with the objection that this legislation will violate our treaties with these countries. If I thought it violated the spirit of any of our treaties, I should not vote for it. I believe nations should scrupulously observe their treaties the same as individuals should scrupulously carry out their contracts. I do not believe that this bill violates the spirit of any treaty, and for that reason I shall oppose the amendment of the gentleman from Massachusetts [Mr. ROGERS], because if you incorporate in this bill the language of that amendment you defeat the bill, because the gentleman's amendment is predicated upon the assumption that the bill does violate the treaties. I, for one, am opposed to these slackers hiding behind

some alleged treaty right, and while we draft our boys and send them to the trenches to fight to save the very existence of the countries in which these slackers are born, they wish to stay here and take the place of our boys. Let them either go back to the land of their birth and fight under the flag of their nativity, or else let them come up and assume the burdens that the citizens of the land of their adoption have to assume, and thereby show that they are worthy of the protection which the laws and liberty and institutions of the land of their adoption gives to them.

Requiring Railroads to Pay Judgments.

SPEECH

OF

HON. OTIS WINGO,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 14, 1918.

The House had under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 3752) to provide for the operation of transportation systems while under Federal control, for the just compensation of their owners, and for other purposes.

Mr. WINGO. Mr. Speaker, as far as I am concerned, I hope this conference report will be rejected. There are several reasons for its rejection, and in five minutes' time I shall not undertake to touch more than one of them. I wish I had the time to discuss the question that the gentleman from Iowa raised, that the words, "orders of the President," did not give him some authority and vest in him some power or even some liability; and therefore the language taken in connection with the preceding section plainly indicates what they state, that the President shall have the right not only to set aside Federal statutes but State statutes, and it goes further and says "the common law." I am perfectly willing to vote every bit of power and all supplies and all the men that are necessary to enable the administrative forces speedily and victoriously to win this war, but it strikes me as something remarkable in a domestic matter that you propose to give to any man or set of men the right not only to repeal your Federal statutes, but your common laws and the statutes of the State. It is the most astounding proposition I ever heard presented, and to the gentleman from Wyoming I would suggest that he read the debates in the Senate and then he can see just exactly what they intended. The question I rose primarily to discuss was the question I raised with the gentleman from Tennessee. Now, in the bill as it passed the House it had this provision, which you will find on page 29 of the Senate print of the bill and on page 6, section 10, of the conference report—that is, you will find the question I want to raise. On page 29 in the print of the House amendment you will find in the conclusion of the first paragraph on that page the provision—

And final judgment heretofore rendered or that hereafter may be rendered against any common carrier under Federal control shall be paid out of the sum accruing as compensation to the carrier against which such judgment is or was obtained.

Now, the gentleman from Tennessee [Mr. SIMS] gives the reasons that the Senate conferees gave for opposing it. What are those remarkable reasons? One is that it was not necessary to protect the rights of these judgment creditors, and the next is that it required the Director General to keep too many books. Now, let us see. The last objection, of course, is frivolous; but let us go to the question of the rights of the judgment creditors. If it is not necessary to protect their rights, of course this language is not necessary; but let us see. In the provision, in the very same section where you give the President the power to set aside common law, the statute law of the Federal Government, and of the States, you wind up with this provision in that same section in giving the right to sue:

But no process, mesne or final, shall be levied against any property under such Federal control.

Now, what is the judgment creditor going to do? The gentleman from Tennessee says that the railroads have got \$800,000,000 worth of money in their hands. Well, we are taking away from them the only remedy of the small judgment creditor. Take some of these western and southwestern roads; take one of the great trunk lines running from Kansas City to the Gulf. Where are their funds? They are in the hands of their treasurer. They are in the city of New York. Its treasurer is a citizen of New York, and I speak advisedly when I say that judgment creditors might have trouble in locating the bank account of that railroad. But suppose that they could. A farmer

in western Missouri may have gotten a judgment against that railroad for \$100 or \$150 for the killing of a horse, and a court of competent jurisdiction has rendered a judgment upon the finding of fact and the verdict of a jury, and is entitled to that, and yet you say to him, "You can not levy on that property, although you got that judgment before the Federal Government took control."

The gentleman from Tennessee [Mr. SIMS] says that you must look to the fund they have in their hands; that you must go to New York City and try to locate the treasurer and locate the bank account of the railroad and, if you can, attach it.

Mr. TOWNER. Will the gentleman yield?

Mr. WINGO. I yield to the gentleman.

Mr. TOWNER. I want to call attention also to this fact, that you can not under any circumstances attach the current revenues of the railroad.

Mr. WINGO. I am coming to that. The gentleman from Tennessee said that if he did not have that, there would be a lot of money coming to the railroad and he could take legal steps to get it. Any lawyer that knows enough to practice in a justice of the peace court knows you can not touch these funds when they are in the hands of the Federal courts.

The SPEAKER. The time of the gentleman from Arkansas has expired.

Mr. WINGO. Mr. Speaker, I ask unanimous consent for five minutes more.

Mr. SIMS. I yield to the gentleman five minutes more.

Mr. WINGO. This is a serious proposition. It involves the rights of thousands of dollars of judgment creditors. To say it is not necessary to put this in here to protect the rights, when you have taken away from them the ordinary remedy, that is, the right of levy upon their property, is ridiculous. It is ridiculous to deny these people this right. You have taken over the property. You have put the strong hand of the Government on the only property the sheriff can levy on. You say that they have \$800,000,000 in their treasury, and yet you say we will not even act as collector. We will not take out of the funds of the treasurers in New York City the accruing compensation and pay it in satisfaction of this judgment. The gentleman says it will require a lot of bookkeeping. What will it require? All the man in charge of that will have to do will be to see that the judgment is properly certified under the seal of the court, or he could ask the railroad whether there was any question about it, and if there was, he could withhold it and not pay on the ground that it was still disputed.

It is absolutely necessary. It does not put any liability upon the Government, but it simply says to the Government "that for the necessities of the war you have taken away from me the only remedy I have in my State court to satisfy my little judgment." That Government can be fair enough, not generous enough, but fair and generous enough, to see that out of the funds or profits that are going to the railroads, which the Government holds, we will satisfy this little judgment.

Mr. BURNETT. Will the gentleman yield?

Mr. WINGO. Yes.

Mr. BURNETT. I would like to ask the gentleman whether that has been included in conference or was it in the bill as it passed the House?

Mr. WINGO. As it passed the House we put on an amendment that would satisfy everyone. There was objection to my amendment because it would involve payments out of the revolving fund. It directed the President to pay it out of the accruing compensation, so that in many instances the Federal Government would be liable. That has been cut out in conference. And I think they ought to send it back to conference. It could come back here in an hour's time with that simple language, of four or five lines, restored.

You know the temper of many of the railroad executives in this country. In western Arkansas they are all saying to the sheriffs, "Touch this property if you dare on your State judgment," and you understand the sheriffs do not care to interfere with property in the hands of the Federal Government. Do not close the door in the face of simple justice.

Mr. CAMPBELL of Kansas. Will the gentleman yield?

Mr. WINGO. I will.

Mr. CAMPBELL of Kansas. It has been suggested that the taking over of the railroads is a gigantic receivership. Is not the insertion of this clause a good evidence of that?

Mr. WINGO. If it was a receivership, under the laws of every State these judgments would be taken the very first thing.

Mr. CAMPBELL of Kansas. Under her consent?

Mr. WINGO. Under her consent—a prior lien.

Mr. COOPER of Wisconsin. Will the gentleman permit a question?

Mr. WINGO. Yes.

Mr. COOPER of Wisconsin. Where during the war the railroads are under the control of the United States Government, does the gentleman think there ought to be a levy under the judgment of a State court—

Mr. WINGO. I have not asked for that.

Mr. COOPER of Wisconsin (continuing). On the rolling stock of the railroad?

Mr. WINGO. No; the bill specifically prohibits that. I am willing to do that, but the object of the provision that was stricken out was this: While you have taken that remedy away, and I agree it should be, the Government, out of the accruing compensation that is going to the railroads, not the operating income, but the accruing compensation, should take that fund and satisfy these final judgments. It can not be a liability of the Government. It will be a matter of simple justice to pay the claims that are recognized as final under the State laws, with the power of lien on the roadbed and those other things that we take over.

I trust the report will be voted down.

Against Double Exemption From Taxes on United States Bonds by Stockholders of National Banks.

SPEECHES

OF

HON. OTIS WINGO,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11123) to amend an act approved September 24, 1917, entitled "An act to authorize an additional issue of bonds to meet expenditures for the national security and defense, and, for the purpose of assisting in the prosecution of the war, to extend additional credit to foreign governments, and for other purposes."

Mr. WINGO. Mr. Chairman, to use the language of my friend from Iowa [Mr. GREEN], if there is anything that is distressing in this time of peril it is the selfish efforts that are made under the guise of patriotism to get exemption from taxation. This is no new proposition. Before this war came on the stockholders of some banks throughout this country carried on a propaganda, and if I had known this matter was coming up I would have brought from my office magazine article after magazine article contending that all corporate stock ought to be exempt from taxation, and that nothing but the property of the corporation should be taxed. It is the same old cry of double taxation. Now, I have read the testimony before the Ways and Means Committee. I have great respect for the distinguished gentleman who testified, but he is contradicted in his basic facts by his representative who came before our committee upon different occasions, trying to get this from the Banking and Currency Committee. Now, let us see what the statute is, and what you propose to do, and what are the reasons for it.

In the first place, gentlemen talk about exempting bonds from taxation. You can not tax bonds now. A man does not have to have an exemption of his capital stock in order for his bonds to be exempt. You have section 3701 of the Revised Statutes now which makes bonds, stocks, Treasury notes, and all other obligations of the United States exempt from taxation under State, municipal, or other authority. You have now other provisions of the statute. Take section 5219, which will cover the question really involved here. But here is the point. It is not the exemption of bonds from taxation. They are exempt already when the bank holds them. Now, get that, gentlemen. Every gentleman who has made his argument here—the gentleman from Massachusetts and others—has completely overlooked the holdings of the Supreme Court in decision after decision, in cases where stockholders of national banks have sought to evade a State tax, where the Supreme Court has held that it is not a tax upon the national bank, that it is not a tax upon an agency of the United States Government.

One of the learned Chief Justices at one time, in very clear language, said that there are two separate and distinct species of property—the capital of the bank and then the personal property which the holder of the shares enjoys and gives him privilege and standing in the community. You do not tax bonds that are now held. Cut out this section and every bond will be exempt from taxation when held by the bank. That is not what they want. It is proposed to go farther and give double

exemption to a special class—those who own stocks and bonds. Ah, gentlemen, let us see what the reasons are. They say that the principal reason is to encourage the sale of liberty bonds; that they had to depend on the banks. When they brought the statement before the committee I insisted on the representatives of the Treasury Department taking one position or the other. Next Wednesday we will bring out a bill taking the limit off the amount that they can borrow for the purpose of loaning to buy liberty bonds. Why? Because the argument of the Treasury Department is—and it is sound—that we do not want to make the banks bear the burden wholly, and for that reason we should remove the limitation of 10 per cent which the individual can borrow providing he has the collateral. What will be the effect of this? There can not be but one effect, and that will be to encourage every bank in this country, because every stockholder will have an interest to buy and invest every bit of the capital stock and surplus in bonds, because by doing that the bank itself will get exemption to the extent of the bonds, and the stockholder will get exemption from State taxation upon personal property represented by the capital stock certificate.

Can not you see what it will do? It will defeat the very purpose that we have in liberalizing the banks' methods by which they can encourage the patrons to come in by the loan of money.

Mr. PLATT. Will the gentleman yield?

Mr. WINGO. I will.

Mr. PLATT. Can not any bank make 2 per cent more by loaning money than they can by investing in bonds?

Mr. WINGO. That is true; certainly it can, and can not the individual do it?

Mr. PLATT. Every individual can.

Mr. WINGO. He gets an exemption on the Government bonds he owns, not on the stock in the bank. This will not give the individual any encouragement except to encourage him to have his bank and not himself hold it, because his bank will get the benefit of it.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. WINGO. Yes.

Mr. SMITH of Michigan. I understand the amount of bonds that a bank owns is taken out of the bank's property. Why is not the amount of bonds that an individual holds taken out of his property?

Mr. WINGO. It is under every law; you can not tax a man on the bonds.

Mr. SMITH of Michigan. You can not tax him, but the amount of bonds the bank has is taken out of the assets. Why are not the bonds taken out of the individual assets?

Mr. WINGO. They are under State law now. That is my proposition exactly, but you propose to go further and not only give him credit for the bonds he holds but also for the bonds his corporation holds, which are already exempt, as assets of the corporation, and the corporation now gets this exemption.

The gentleman from Ohio, a most excellent gentleman, wants to know if the State will be any worse off. Why, the truth of the business is we will say that the State rate of taxation is 2 per cent, and it will simply mean that the stockholder of the national bank, besides getting the same exemption provided by law for his bank, will get 2 per cent greater dividend upon his stock than any other class of citizens, because his bank will get an exemption and he will be given an additional exemption on the same bonds.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. WINGO. Yes.

Mr. GREEN of Iowa. I think the gentleman misunderstood the purpose of the inquiry of the gentleman from Ohio.

Mr. WINGO. Maybe I have, but I have answered it.

Mr. GREEN of Iowa. What the gentleman meant was that if the banks bought these bonds and they were not taxed in the hands of the bank, the State would be no worse off than if they were in the hands of some individuals.

Mr. WINGO. There is the viciousness of the proposition. The banks are exempt now. The banks will get no better privilege. It will be the individual stockholder who will get exemption from taxation, which under the law is made exempt, on a piece of property represented by a stock certificate, which the Supreme Court has decided is a separate piece of property. You talk about exempting bonds from taxation. All through this law you have statute after statute, one piled on another, that exempt bonds, that exempt stocks, and to-day any State that dares to tax a Government bond, directly or indirectly, will be restrained, and you know the national banks have tested every possible feature. They have tested this proposition, and they come here now to the Congress of the United States, after the Banking and Currency Committee has turned them down, after the best

thought in this country has turned them down, after the Supreme Court of the United States has said there is no merit in their contention, they come now, creeping in here under cover of the patriotic spirit of the American Congress, and say in this time of trial, "Give us special exemption from taxation." I have nothing but contempt for that proposition and the men who are back of that propaganda, by which the committee is misled. Vote for this bill? Of course, we will have to. Vote out this section? I doubt if you will, but it is an infamous proposition, and you ought to be fair. You want to follow your committee, and so do I, for they are honest and patriotic, but the only testimony they have is testimony that says that there is only one Southern State that is interested, when there have been at least six States that have taken it up. I am going to vote for the bill, but I enter my protest now against this feature. I have fought it for five years every time it has come up. It came up insidiously when we had under consideration the Federal reserve act. We have killed it twice at this session of Congress, and now it comes in here and tries to ride to a haven of safety on the patriotic sentiment of this House. [Applause.]

—
Mr. WINGO (later on the same day) said:

Mr. Chairman, I move to strike out the last word, and I shall not take but a moment. I always enjoy hearing the genial and versatile gentleman from North Carolina. The proposition under discussion awhile ago was the question of exempting stockholders from State taxation on personal property and not exempting banks from taxation. He made an able argument against taxing banks. We do not tax banks now, and if we pass this section the banks will not get any particular benefit at all. As to the suggestion that the State of Arkansas was

not patriotic, but would wait until the banks got loaded up with bonds and then come in and tax them, I will not say that is ridiculous because it comes from too great a source. You do not tax them now. Nobody attempts to tax them. The State of Arkansas does not object to anything going to the Government. The State of Arkansas has met its obligation during the present crisis to the Government to as great an extent as has the State from which the gentleman comes. What the State objects to is not that this is going to the Government for war necessities, but getting an exemption from State taxation when it will not benefit the Government at all. Now, they have been taxing the entire capital of the banks, and the stock certificates of every bank are held except in a few States where they have got legislation to exempt them. When the liberty bonds are issued, if you put in this provision, gentlemen will come along and get exemption that nobody has ever had before and reduce the assessed values of every State. The State of Arkansas and every State in the North do not object to paying anything that will go into the United States Treasury, but they do object to exempting citizens from the taxation of personal property. That is the thing I object to, and that is why we are opposed to this proposition. Of course, you are going to carry it through ultimately and try to do what the gentleman from Kansas thinks is done in the bill, exempt all corporate stocks from taxation. The gentleman states that is why he supports it. That is a piece of camouflage put on here. Every lawyer in this House knows that Congress can not exempt the shares of State banks from State taxation, but it is put in here to sugar-coat and make the State banks think that they are getting something alongside the other banks.

The CHAIRMAN. The time of the gentleman has expired.
